## Smooth Operator

If you've ever experienced a computer reset caused by a surge in the mains supply then an investment in a power filter such as Warwick Products' Supa 7 could prove worthwhile.

Rated at 7 amps – more than enough for most computer systems – the Supa 7 serves two useful purposes. First it smooths out any voltage spikes caused by light switches or by electric motors in heating systems, refrigerators or deep freezers. Secondly the unit filters out radio frequency interference (RFI) which can emanate from many sources.

Excluding VAT, the price is £14.95 plus 50p postage and packing.

***Touchline:***
***Warwick Products:*** *50 Marsh Wall, West India Dock, London E14 9XJ.* ***Tel:*** *01-538 2535.*

***The Supa 7 Power Filter***

## Little Brother

A new low-cost printer launched by Brother recently promises a print speed of 168 cps. The compact Brother 1209 has a dual interface and three resident fonts: Prestige, Gothic and Quadro.

Priced at £265, the 1209 has Epson and IBM compatibility for both sheet and tractor feed paper.

***Touchline:***
***Brother Computer Peripherals Division, Jones+Brother:*** *Shepley Street, Guide Bridge, Audenshaw, Manchester M34 5JD.* ***Tel:*** *061-330 6531.*

## N-n-n-n-Cascade

Billed as the 'ultimate simulation of true warfare', Cascade have released the first part of the 19 wargame duet based on the music by Paul Hardcastle.

19 part 1 – Boot Camp is the training ground for the raw 19 year old recruit stars in the game. Boot Camp contains detailed graphic images and arcade action as the recruit progresses through basic training on a playing area (war zone) which is included in the package as a full-colour map.

On completion of basic training you'll have to wait until the second part, 10 part 2 – Vietnam, is released later this year.

Boot Camp is available on C64 cassette for £9.95 or £14.95 on disk.

***Touchlines:***
***Cascade Games:*** *1-3 Haywra Crescent, Harrogate, North Yorkshire HG1 5BG.* ***Tel:*** *0423 525325.* ***Ansaphone:*** *0423 504663.*

***John Lewis and Nigel Stephens make n-n-n-notes about basic training on the Yorkshire Moors***

## Re-Inkarnation

Tired, old printer ribbons can be given a new lease of life with MGA Microsystems' MacInker unit.

Whether the ribbon is made of felt, silk, cotton or nylon, the MacInker unit will evenly re-ink it via a unique capillary mesh. The manufacturer claims that the use of this unit can extend the life of a ribbon by as much as 40 times for only a few pence each time it is recharged.

Actual prices for any cartridge or reel system can be supplied on application to MGA but typical costs range from £60 to £80 inclusive of VAT and postage.

MGA also market Supra Corporation's 64K buffer for Centronics printers. Known as the Microstuffer, this unit has the added benefit of being able to reprint the buffer contents at the touch of a button.

The MicroStuffer comes complete with a Centronics input socket and output lead for £59.09 plus VAT.

***Touchline:***

## Star Turn

The NL-10 is dead, long live the LC-10! At the recent Which Computer? Show, Star Micronics announced the launch of a new low-cost printer with a higher specification but at a lower cost than the NL-10 that it replaces.

The new multifont LC-10 offers printing speeds of 120 characters per second in draft mode and an NLQ speed of 30 cps, six resident fonts and seven print pitches selectable from a comprehensive front panel.

Another desirable feature which has been included on the new machine is a push feed tractor mechanism which means that paper wastage is kept to a minimum especially when using short form, tear off sheets such as address labels.

An automatic paper parking capability removes the need to remove and relace tractor fed paper before and after feeding in single sheets for those important one-off missives.

The retail price of the LC-10 is £229 excluding VAT.

***Touchlines:***

## Budget Booster

Following the recent tie up between Mastertronic and Activision, the limited deal for Activision's back catalogue has been increased to include all the present and future products on the Activision label. The first batch, released in January included Eidolon, Ball Blazer and the smash hit of several years ago, Ghostbusters.

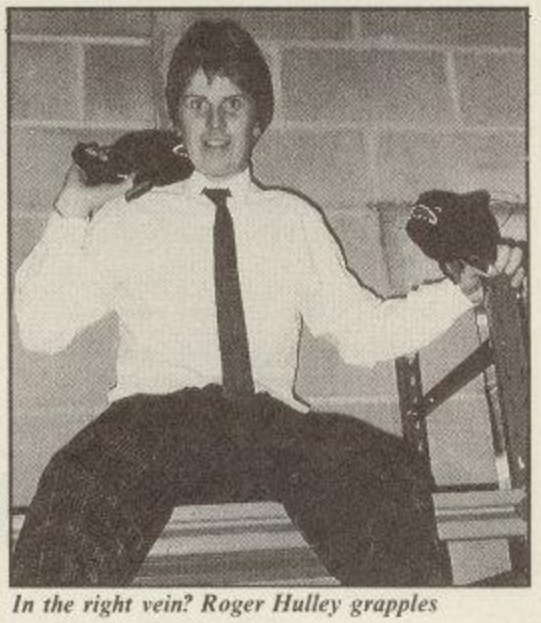

Rod Coussens of Activision commented, "In a business where shelf life may be short lived, the ability to recycle through budget labels is beneficial to all concerned. We are pleased to forge this association with Mastertronic and look forward to an on-going, successful relationship."

In a reciprocal bout of mutual back slapping, a spokesperson at Mastertronic responded, "We are delighted with this deal with Rod, the Activision range reinforces our policy of only releasing the very best quality products on the Ricochet label."

The Activision/Ricochet titles will be released at £1.99 and £2.99 for all 8-bit machines and £9.99 for 16-bit versions. The deal is important for the image of Mastertronic which is suffering a little under the new Gallup poll sampling system. Despite extremely powerful shouts of "humbug" from Mastertronic, Code Masters are still claiming to have ousted them from the top slot in budget software sales.

***Touchline:***
***Mastertronic:*** *8-10 Paul Street, London EC2.* ***Tel:*** *01-377 6880.*
***Activision:*** *23 Pond Street, Hampstead, London NW3 2PN.* ***Tel:*** *01-431 1101.*

## Alternative Entertainment

*In the right vein? Roger Hulley grapples*

Alternative, reputedly the fastest growing software house, has cast a wider net to trawl in the rights to products from Piranha, Audiogenic, Incentive and Bubble Bus.

In less than a year Alternative has charted 30 times and,for one heady period during the last PCW Show, it held the top slot in the C16, Amstrad, Spectrum and consequently, the overall charts.

Roger Hulley, Alternative's Managing Director, boasts, "I don't think the public could ask for better value. I can see no reason why products such as Trap Door or Popeye at £1.99 should not dominate the charts for months to come."

Also on the Alternative menu are Moon Cresta from Incentive and Audiogenic's Psycastria.

***Touchline:***
***Alternative Software:*** *Units 3-6 Baileygate Estate, Pontefract, West Yorkshire WF8 2LN.* ***Tel:*** *0977 797777.*

## A Change of Place

September sees a change of venue for the PCW Show from Olympia to the larger main hall of Earl's Court.

"The Show has outgrown Olympia both in terms of floor space and the increased number of visitors that it now attracts," and PCW Show manager Mike Blackman. He then explained, "It is a move that we have wanted to make for some time and the increased demand for space in 1988 means that the move has to be made now."

The move enables Montbuild, the Show's organisers, to divide the exhibition into three sections instead of the usual two. The Business and Leisure areas will still continue but the third area can now be developed to appeal to serious home computer and small business users.

Each section will have its own separate entrance which should relieve the businessmen who had to queue for extended periods during last year's Show. The extra space inside each hall will also allow the companies to indulge in more ambitious displays than previously permitted at Olympia.

This year's Show is scheduled for 14-18 September and the new venue is also more easily accessible to what promises to be yet another record-breaking crowd of computer users.

## Hewson v Telecomsoft

Following an injunction and subsequent court case in which Telecomsoft and Hewson contested publishing rights for Morpheus and Magnetron, it was decided for the moment that Telecomsoft could go ahead and release the titles on their Firebird label.

For those who may not have heard the story, the two games, programmed by Graftgold, were originally planned for release by Hewson and the machinery was already in motion for the promotion of the programs at last September's PCW Show. On the eve of the show, Andrew Hewson was horrified to learn that Steve Turner, Graftgold's boss and author of Magnetron, had signed a programming contract with Telecomsoft for all future Graftgold products and separate contracts for Magnetron and Andrew Braybrook's Morpheus.

In a single blow Hewson was not only severed from what he imagined would be his two Christmas hits but also from his greatest asset, Andrew Braybrook – author of Paradroid and Uridium.

Prior to the announcement, it was whispered that Turner and Braybrook were searching for a new publisher and it was also rumoured that they had already been flirting with Electronic Arts.

Although Telecomsoft have been given the go ahead to publish, the Hewson versus Telecomsoft dispute will not reach a conclusion for several months and Andrew Hewson will not cease the fight until the bitter end.

## Mini Office Moneyspinner

It's not often that a software package gets a heavy plug on television, the last software package that received heavy promotion on the haunted goldfish bowl was Rainbird's Starglider on Get Fresh. For a business package to receive a mention is an even rarer occurence but this is the accolade which Mini Office II has received.

Channel 4's consumer finance show, Moneyspinner, selected the Mini Office II suite of programs as the best of four home computer finance packages.

The challenge came from Supercalc 3, Money Manager and PlanIt – a second product from Database, the manufacturers of Mini Office II. Each program was judged on three main criteria: value for money, ease of use and ability to tackle the job in hand successfully. On all counts Mini Office II scored maximum points and, according to Moneyspinner's producer, Belinda Giles, 'would be most suitable for our viewers attempting to produce accounts on their home computer.' Mini Office II is available for the C64 and in an expanded form for the C128 for £14.95.

***Touchline:***

## Straw Poll

If anyone can find a Commodore 64 program disk that can't be loaded from the latest version of the Excellerator Plus disk drive, Evesham Micros' managing director, Richard Austin, will supply a free Amiga 500. In his own words he expresses his confidence in the Excellerator's compatibility by saying, "If we have to give away more than two I will eat my hat".

The competition has been arranged through Evesham's PR representatives, Solution Public Relations, because Evesham Micros is keen to ensure that the Excellerator is compatible with all Commodore 64 software designed to load from the 1541C disk drive. This would further enhance the growing reputation of the streamlined Excellerator which retails at £159.95, that's £40 cheaper than the Commodore drive.

Relating to the competition, Richard Austin commented, "We have tried to make the Excellerator as efficient as possible but we cannot test every computer game because there are too many of them. Who better than the public to attempt this task for us?

"Despite the scale of this competition, I doubt whether we'll have to give away many Amigas."

All entrants have to do is to get a postcard and write down the name of any Commodore 64 game (obtained from a computer shop) which is compatible with the 1541C but not with the latest Excellerator Plus. The first entry received for each different program will win an Amiga. Postcards should be sent to Evesham Micros, c/o Solution Public Relations, Carlton House, 11-12 Marlborough Place, Brighton BN1 1UB. The closing date is 1st March, 1988.

*Evesham Micros' Richard Austin prepares to enjoy a meagre diet*

● A
Plus

● **WARP 25. THE WORLD'S FASTEST SERIAL DISK TURBO – NOW EVEN FASTER! LOADS 200 BLOCKS IN 6 SECONDS! 240 BLOCKS IN 7 SECONDS!** – that's even faster than some parallel systems. Built into the cartridge – no extra hardware or software required. Includes supercast, warpsave, scratch, filecopy/convert. Integrated with normal disk turbo for supercompatibility – auto detects warp or normal format so no special load commands are required. Turbo and Warp 25 speed are entirely independent of the cartridge with SUPERBOOT.

● **SIMPLE TO USE:** Just press the button and make a complete backup – tape to disk, tape to tape, disc to tape, disk to disk. THE PROCESS IS AUTOMATIC – JUST GIVE THE BACKUP A NAME.

● **TURBO RELOAD.** All backups will reload at turbo speed, COMPLETELY INDEPENDENTLY OF THE CARTRIDGE.

● **SPRITE KILLER.** Make yourself invincible. Disable sprite collisions – works with many programs.

● **PRINTER DUMP.** Freeze any game and print out the screen. Eg. loading picture, high score screen etc. Works with most printers. MPS 801, 803, Star, Epson etc. Double size, 16 shades, reverse print option. Very versatile – no user knowledge required.

● **PICTURE SAVE.** Save any Hires multicolour screen to disk at the push of a button. Compatible with Blazing Paddles, Koala, Artist 64, Image System etc.

● **SPRITE MONITOR.** Unique Sprite monitors allows you to freeze the action and view all the sprites, watch the sprite animation, save or delete any sprite. Load sprites from one game into another to make customised programs.

● **POKES/CHEAT MODE.** Press the button and enter those pokes for extra lives etc., then restart the program or make a backup. Ideal for custom games.

● **MULTISTAGE TRANSFER.** Even transfers multistage programs from tape to disk. The extra parts fast load – a unique feature. Enhancement disk available for non standard multi-loaders (see below).

● **SUPER COMPACTOR.** Ultra efficient program compaction techniques. Each program saved as a single file. 3 programs per disk side – 6 programs per disk, if you use both sides.

● **TEXT MODIFY.** Change title screens, high score screens etc. Put your own name into a game then restart it or make a backup to tape or disk. Very simple to use.

● **MONITOR.** Full feature 'Floating' type MACHINE CODE MONITOR. All standard features plus many more:- assemble, disassemble, hex dump, interpret, transfer, compare, fill, hunt, number conversion, bank switching, relocate, load/save etc. Uses no memory. Full printer support.

● **DISK MONITOR.** A special monitor for use on the RAM inside your disk drive. All the usual commands – a useful hacking tool.

● **WHOLE DISK COPY.** Copy a full unprotected disk in under two minutes with only one drive.

● **FAST FILE COPY.** Works with standard and Warp 25 files of up to 249 blocks. Converts formats to and from Warp 25.

● **FAST FORMAT.** Under 20 seconds.

● **TOOLKIT COMMANDS.** A whole range of useful new commands including: AUTO LINE NUMBERING, DELETE, MERGE, APPEND, OLD, LINESAVE, etc., PRINTERLISTER – list any program (including directory) directly from disk to printer or screen without corrupting memory.

● **REDEFINED FUNCTION KEYS.** Single stroke commands for operation of many common commands including: LOAD, SAVE, DIR. Load from directory – no need to type in filename.

● **TAPE TURBO.** Designed to make turbo load/save for your own programs. No screen blanking during loading.

***REMEMBER*** all features are built in and available at the touch of a key. All features work with both **TAPE** and **DISK.** (Except multipart transfer & disk file utility).

### ENHANCEMENT DISK

Contains routines for transferring many of the non-standard multi-load games from tape to disk. Over 40 titles. Latest additions are **LAST NINJA, ROAD RUNNER** (infinitive lives option), **BLOOD 'N' GUTS** (play any event), **DECEPTOR, LEADERBOARD EXEC** and **WORLD CLASS, KILLED UNTIL DEAD, MASK, INDIANA JONES, IMPLOSION, TAIPAN,** plus all the classics including **SUMMER GAMES, WORLD GAMES, DRAGONS LAIR** 1 and 2, **GAUNTLET, SUPERCYCLE** etc. Works in conjunction with **ACTION REPLAY.**

Disk includes **GRAPHIC SLIDESHOW** for displaying pictures saved with **ACTION REPLAY.** Plus Warp 25, Superboot – non Action Replay owners can speed up their 'expert' or 'freeze machine' programs to see what they have been missing.

# ERTAKES A QUANTUM LEAP
# AYMK IV HAS ARRIVED!

FOR CBM64/128

## WILBACKUP MORE PROGRAMS THAN ANY RIVAL UTILITY.

***BUT THATS NOT ALL ... NOW AVAILABLE FOR THE SERIOUS PROGRAM HACKER***

**ACTION REPLAY IV 'PROFESSIONAL'™**

● All the features of the normal Action Replay IV but with an amazing on board LSI LOGIC PROCESSING CHIP. Plus 32K operating system ROM and 8K RAM CHIP. The first RAM/ROM based cartridge of its type!

***ALL THE MK IV FEATURES PLUS ...***

● **FULLY INTEGRATED OPERATION.** The MK IV 'Professional' has all the features of the MK IV plus an onboard custom LSI LOGIC PROCESSING CHIP that integrates the whole range of utilities and makes them available at the press of a button at any time.

● **EXTENDED MONITOR.** The 'Professional' has an extra powerful machine code monitor. Because it has both ROM and RAM at its disposal the Professional can freeze any program and then examine the WHOLE OF COMPUTER MEMORY in its frozen state including screen RAM, ZERO PAGE and STACK.

Full feature disassembly, compare, fill, transfer, hunt, relocate, jump etc. etc. In fact all the features of the best fully blown monitor available. Return to the frozen program at the press of a key at the point you left it! An absolute must for the program hacker – or even the programmer who needs to de-bug his program.

● **INTELLIGENT HARDWARE.** The Professional hardware is unmatched anywhere in the world today. The special logic processing chip can cope with protection methods as they appear by reacting to its environment.

**MK IV PROFESSIONAL ONLY £34.99 POST FREE**

**WARP 25** Reloads an average BACK-UP in 6 Seconds!!

### UPGRADE INFORMATION

**MK III TO MK IV.** Just send £9.99 and we will send you the new MK IV Chip to plug into your cartridge. Fitting is very easy.
**MK III TO MK IV 'PROFESSIONAL'.** Send your old cartridge plus £19.99 and we will send you a new Professional MK IV.

MK 2 Action Replay owners can get £10 as part exchange against either the MK IV or Professional. Send old cartridge plus balance.

### PERFORMANCE PROMISE

Action Replay will backup any program that any other cartridge can backup – and more! It also has an unmatched range of onboard features. Before you buy check our competitors ads to see what they offer and see how many of the Action Replay MK IV features are either not there or have to be loaded from Supergate disks etc. When you buy Action Replay if you don't find our claims to be true then return it within 14 days for a full refund.

# Programming

*If you've got a brill idea for a game, but you're not too sure how to go about it, this article will provide the tips and advice that will put you on the right road*

***By Tony Hetherington***

Have you ever looked at a game or read a review and thought that you could write a chart topping game? If so, then why not give it a go. The worst thing that could happen is that you're left with a game that's simply enjoyed by your friends or you could become the first software millionaire!

Before we start it is important to remember that not everyone has your outlook on games and the market, so if you hit a brick wall, back off and try elsewhere. This can be a frustrating business but don't add to your problems by engaging in arguments fueled by dented egos.

So you want to write a game? The first thing you have to do is find answers to the following important questions.

- *What type of game is it going to be?*

Is it going to be an adventure, an arcade game, a sports simulation or a war or strategy game? It is an important choice since arcade games sell considerably more than others.

- *Is it original?*

If it isn't then forget it, as no one is going to consider the 81st version of Gauntlet, Space Invaders or Marble Madness. You can only con some of the people some of the time and your're unlikely to get away with a ripped-off game. After all how would you feel if someone stole your ideas?

- *Which computer will it run on?*

The C64 still has the biggest market and so a game for this machine should sell well. However, you should also think whether the game can be converted to other home micros; does it need the extra capacity offered by disk or can it be updated to become one of the growing band of Amiga games. Whatever machine you choose you should try and push it to its limits.

- *Is this game your best idea?*

It's surprising how often a programmer gets stuck in a project and shelves other ideas until they've finished what they're working on. Sometimes the best idea never sees the light of day.

- *Is the computer necessary?*

An odd question but an important one when you consider the number of games of the book, film and board game that are appearing on the shelves. If the computer version is actually harder to play then it's unlikely to be accepted.

- *Will the game have lasting appeal?*

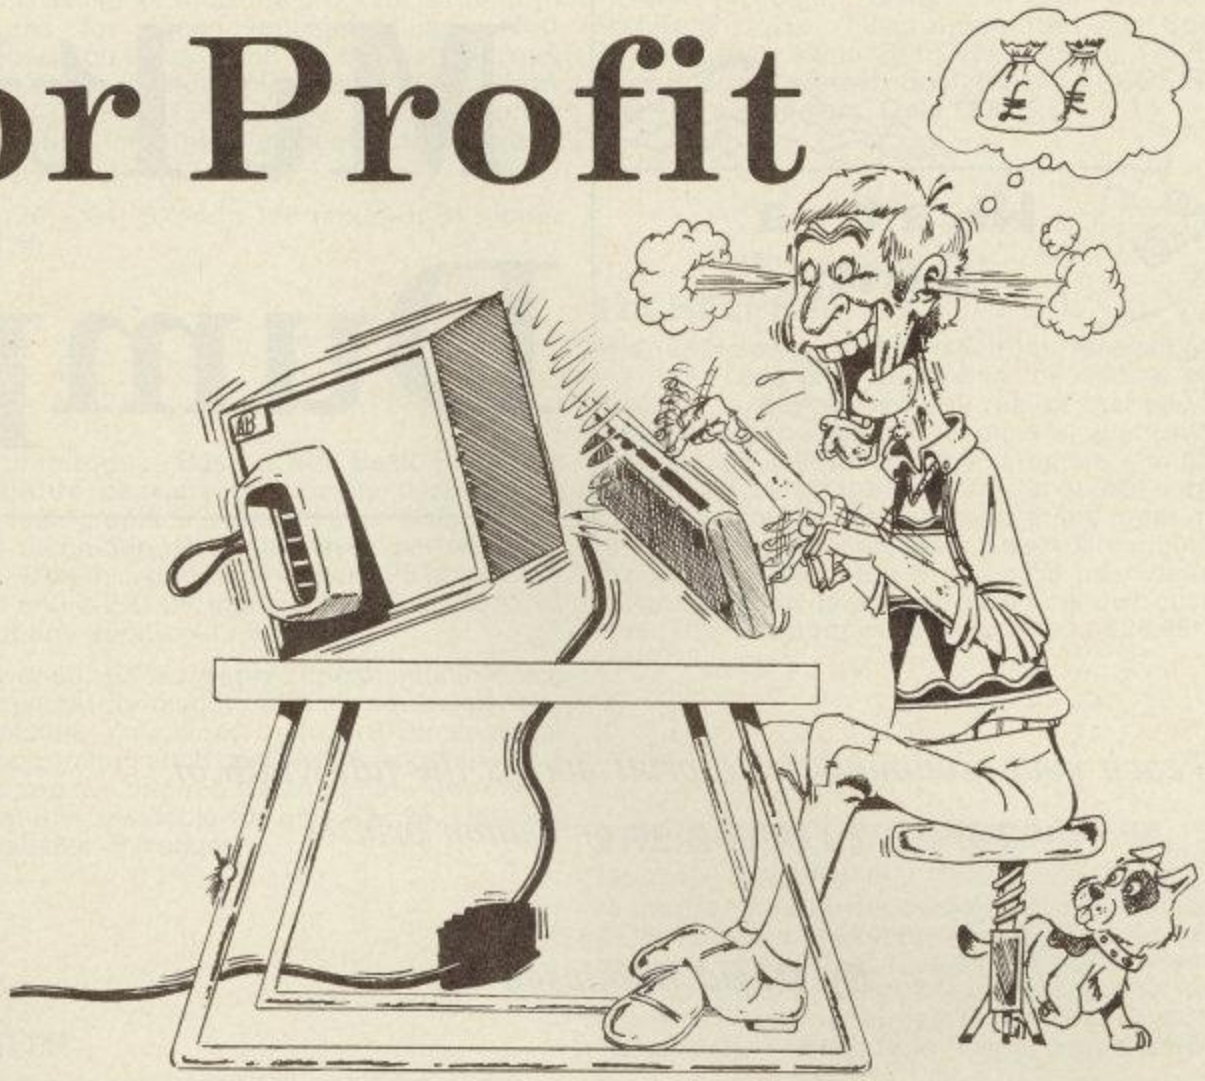

It takes almost six months for a game to reach the shops so don't make it too topical as it will be out of date by the time it's released. For example, at the time of writing this the news is full of storms, floods and stock market crashes but by the time you read this ...

Once you've pondered these pertinent points you should have a working idea. If you haven't, then don't despair as software houses are always on the look out for programmers for conversion work or to team up with a games designer who can't program. The best way to approach them is to show them what you can do either through demo programs or your version of a coin-op game.

## Writing the Game

When you write the game use a well-known development toolkit or

# for Profit

assembler as well as commercial sprite editors and graphic packages as this will make life easier.

Include as much animation and graphic detail in your game as you can possibly cram in as this will not only grab the eye of the software manager but also the buyers and reviewers. For example, the most memorable part of Odin's Heartland is the way the skeletons crumble when they're shot.

Leave room for a sound track or sound effect if you can't do them yourself, but ensure they can be turned off as many players have their games going late into the night.

Include features such as high score tables, load and save game options and joystick and user definable keyboard options to make your game as playable as possible. If you've got room, include a demo routine or short on-screen instructions so players can load and go.

Write your program using clear structured routines and keep them well documented. It may sound like hard work but it will actually make things a lot easier particularly when your debugging or make changes. Software houses nearly always want changes.

When you've finished coding, test and debug it and ensure that you actually like playing it. If you don't then nobody else will. When you think you have the best version save it several times, try it on your friends and then submit it to a software house.

## Submitting Games

It is important to ensure that you include all the relevant information including details of the machine requirements, a short description of the game describing why it's different and hints or saved game positions so that the software evaluator can see as much as possible, as quickly as possible.

This is all part of making it easy for the software house to say, yes!

If you haven't finished the game then send at least a demo routine or some sample graphics as it's very difficult to get an idea across to a busy man only on paper.

Send the game to the software house that's right for your type of game. For example you'll probably be wasting your time sending an adventure to Elite or a shoot-em-up to Level 9.

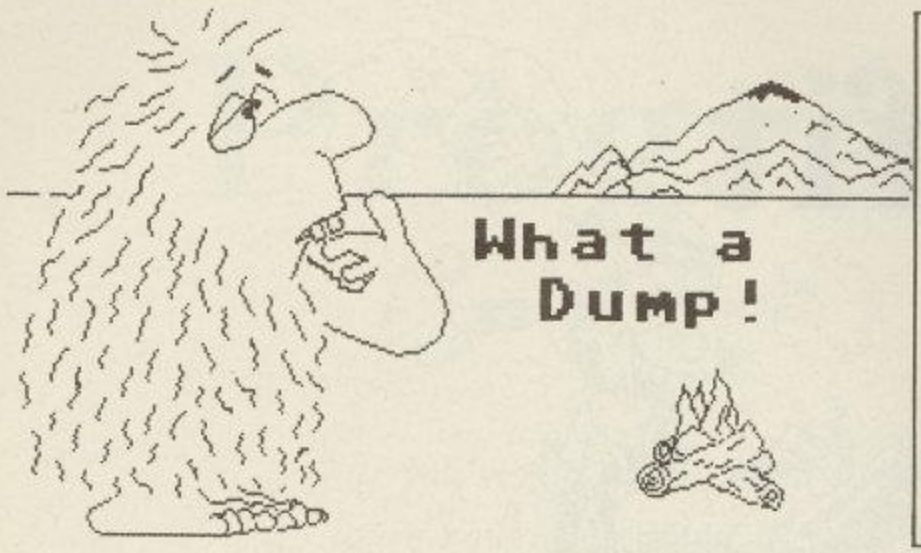

Finally, don't give up. It is unlikely that your first effort will be accepted on the first attempt so take constructive criticism and learn from your mistakes.

## How much can you earn?

The papers were once full of the thousands that young programmers were making and I'm afraid these accounts are largely exaggerated. However, if a game is accepted and sells well on more than one formit it could bring in a tidy sum. Therefore you should be careful about what deal you accept. Some software houses offer a fixed sum while others have a royalty payment paid for each game sold. You're probably better off with a royalty deal since it also shows confidence in your own game. Either way ask for an advance and a contract and check the small print.

There is no real need to involve lawyers and secrecy clauses to protect your work since I find that sending a copy of the program to yourself by recorded delivery is proof enough.

If you think this is all too much then why not start the ball rolling and send off a program to *Your Commodore*. If it's accepted you'll receive a cheque for your program and you'll be well on your way to programming for profit!

# Multi Dump

*Teach your Commodore to print across the full width of the paper on your Epson or Canon printer*

***By David Wilkinson***

With this handy utility, high resolution and character screens can be dumped at full or half paper width by simply pressing a function key. A user friendly BASIC program is provided to simplify the setting up of the machine language program. Screen location addresses can be given in decimal or hex and you can also dump screens which use special character sets. Any printer which uses the Epson set of control codes can be used when connected to the user port on the C64.

The Epson FX80, the Epson LX80, the Canon PW-1080A or the Kaga Taxan printers will all work correctly with Multi Dump. You will need a cable with a plug for the C64 user port on one end and a Centronics printer plug on the other end. These can be bought made up for about £15, or you can make up your own as described in the October 1987 issue of *Your Commodore*.

## Typing in Multi Dump

The machine code program which does the work is given in program 1 as a self-checking BASIC program. Type this in and save it before you run it. Once you have it safe, type RUN. The chances are that you will have made a typing error, and if so the program will tell you which line the error is on. Correct the error and RUN it again. When there are no more errors you should save the program again.

You can now test Multi Dump by typing SYS52662 and then pressing function key f5. Provided your printer is switched on and connected correctly you should get a half page width dump of your screen on the printer. If you have additional blank lines on your printout don't worry, this can be corrected by using program 2, which is the BASIC set-up program for Multi Dump.

## Using the Set-Up Program

Press RUN/RESTORE to switch off Multi Dump and type NEW (I hope you remembered to save your corrected program!). Now type in program 2 and save it. Notice the gaps in the line numbers, these gaps are for lines which will be added later. A dump of the first page of the set-up program is shown in figure 1. As you can see, the set-up program asks questions which must be answered with Y for yes, or N for no. Answering Y for each question will restore the default values to the Multi Dump machine code. If you answer N to any of the first three questions, you will then be asked for the location addresses of the screen or character set you want to use.

These can be given as decimal values, or, if preceded by the dollar sign, as hexadecimal values, e.g. the program will accept either 57344 or $E000 as equally correct forms at input.

You can decide where on the page you want to position the small screen dump. Typing in zero puts the picture on the left half of the page, while 40 puts the picture on the right half.

If your printout has narrow black bands across the page, answer N to the narrow line feed question. This will increase the line feed from 23/216 inches to 24/216 inches and should correct the problem. If your printout has white bands between each printed

***Continued on page 16***

# Financial Systems Software Ltd

## 1571/1541 Drive Alignment Package.

1571/1541 Drive Alignment reports the alignment condition of the disk drive as you perform adjustments. On screen help is available while the program is running. Includes features for speed adjustment and stop adjustment. Allows you to test each full and half track as you re-align the drive. Complete instruction manual on aligning both 1571 and 1541 drives. Even includes instruction on how to load the alignment program when nothing else will load!

Works on the 128, C64, SX64 in 128 mode or 64 mode. **Price Only £24.95**

## BASIC 8.

We are proud to introduce Basic 8 with Basic Paint, the first C128 Software package specifically designed to unleash the hidden graphics power of your 128. Using a special wedge technique, Basic achieves performance rivaling that of 16 bit micros! Imagine your 128 producing a resolution of 640 x 200 on mono and 640 x 192 in 16 colours without any additional hardware!

Basic 8 adds over 50 Hi-Res graphic commands to Basic 7.0 and is completely compatible with it's advanced non-graphic commands. You work in true 3-Dimensional environment, controlling such parameters as perspective viewing angles and the origin & depth of the view, many, many more features, available for only **£34.95.** Detailed information available on request.

## 1571 FIX ROM.

Are you experiencing any of the following problems:-
- ★ I/O Error 5 when using Superbase?
- ★ Device Not Present errors?
- ★ Major problems when 2 or more files open?
- ★ Slow writing to second side of disk?
- ★ Takes for ever to recognize a flippy disk?

If you have one or more of these problems then you need 1571 FIX ROM, just plugs in. **Only £24.95**

## SUPER 81 UTILITIES.

Super 81 Utilities is a complete utilities package for the 1581 disk drive and C128 computer. Among the many Super 81 Utilities features are:-

Copy whole disks from 1541 or 1571 format to 1581 partitions. Copy 1541 or 1571 to 1581 disks. Copy 1581 files to 1571 disks. Backup 1581 disks or files with 1 or 2 1581's. Supplied on both 3 1/2" and 5 1/4" format. Perform many CP/M and MS-DOS utility functions. Performs numerous DOS functions such as rename a disk, rename a file, scratch or unscratch files, lock or unlock files, create auto-boot and much more!

Super 81 Utilities is a full featured disk utilities system for the 1581 and C128 for only **£29.95**

**Financial Systems Software Ltd.,**
**2nd Floor, Anbrian House,**
**St Mary's Street, Worcester, WR1 1HA.**

**Telephone (0905) 611463**

***All prices include VAT and P&P. Foreign Orders add £2.50 per package.***

## 128 CANNON.

The latest high speed copier from the states, CANNON will copy between the 1541, 1571, 1570 and the new 1581. Includes a Nibbler, (faster than some parallel copiers!). Fast Disk Copier, File Copier, 1581 File Copier, MFM Copier to copy some IBM/CPM software, T/S Editor, Disc Error Scanner, Density Scanner and KRACKER JAX with over 100 parameters. **Only £29.95.**

## 128 HELPER.

The 128 Helper is the first electronic reference manual for the 128. Let's say you are in the middle of writing a program in Basic when you realize that you need more information on a specific command, just touch the help key, almost instantly a menu appears with all Basic commands, select the command in question and a screen of detailed information appears, at the press of a key you return to your Basic program. The most exciting feature of the 128 Helper is the program is user definable. The program will guide you to create your own custom screen files. This program will only cost you **£24.95**

## THE BIG BLUE READER CP/M.

New from SOGWAP Inc., The Big Blue Reader allows you to transfer files generated on most IBM-Compatible (MS-DOS) software to all three modes of the Commodore 128 and vice versa. Thus, files can be transferred to or from MS-DOS, GCR (128 or 64) and CP/M disk formats. The Big Blue Reader requires a 1571 on both the Commodore 128 and 64. The Big Blue Reader only **£29.95.**

## NEW 3 1/2 DISK DRIVES.

The new Commodore 1581 1 megabyte disk drive is now available. The NEW 3 1/2" disk drive is compatible with all Commodore computers from the 128 to the 64. This drive has been designed for serious and professional users it offers 3,160 blocks free, 8,000 bytes per second (31 blocks) loading rate. Software for this drive includes CADPAK, CHARTPAK, Oxford Pascal, Hackpack, Petspeed, GEOS, etc. Using the CANNON or Super 81 Utilities most software can simply be copied to the 3 1/2" disks. The drive is available for only **£199.95.**

## NEW FOR THE 64 - SYSRES

***WE'RE GOING TO CHANGE YOUR MIND ABOUT BASIC!***

SYSRES is the *ULTIMATE BASIC* enhancement system for the C64, SYSRES adds over 25 major commands and over 1,000 additional functions to standard Basic. *NO that wasn't a typing error.* Commands include delete, merge, run, auto, bload, bsave, old, trace, kill, renumber, why, exec and many more.

SYSRES comes complete with a 110 page easy to follow reference manual, available for **£24.95** details available on request.

## 1351 MOUSE.

The 100% proportional compatible Commodore Mouse, works with GEOS 64/128, CADPAK, and most drawing packages. **Only £29.95**.

line, this is because the printer is set to produce an automatic line feed for each carriage return. To eliminate this, answer N to the line feed question.

The machine code for Multi Dump is tucked away at the top of the spare memory block – from 52646 ($CDA6) to 53247 ($CFFF). This means that it can stay there without interference from BASIC programs and is safe even from many machine language programs which are stored at 49152 ($C000).

Once you have installed Multi Dump, you can load your own BASIC or Machine language program, use it to draw a picture, or create a screen from CBM characters and then press the appropriate function key to get a hard copy. (This will work only if your program does not overwrite Multi Dump, or change the interrupt vector.)

Save the modified set-up program under a new name and then load and run program 1. The machine code for this program is now in memory and can be saved by typing in the following commands directly:

```
POKE43,166:POKE44,205
POKE45,0:POKE46,208
then for tape users:
SAVE "MULTIDUMP/C"
or for disk users:
SAVE "MULTIDUMP/C",8
```

Your machine code program will then be saved from memory. This procedure alters the memory pointers and to restore them to the usual values you must switch the computer off and then on again. For tape users it is important that the machine code program is stored immediately following the modified set-up program.

## Printing your Character Screen

Press key f5 or f7 and Multi Dump will give you an exact copy of your screen as you see it. This means that you can use all the graphic characters, or the lower case character set and they will all be faithfully reproduced. The default character screen is the normal text screen which starts at 1024 ($0400) but the BASIC set-up program allows you to change this to any memory block you want. If you wish, you can also use Multi Dump with special character sets.

## Printing your High Resolution Screen

Pressing key f1 or f3 will result in the high-res screen being dumped to the printer. The high-res screen is stored at a different memory location to the normal text screen. Multi Dump uses as a default the memory block at 8192 ($2000) which is used by many drawing programs.

However, the BASIC set-up program allows you to alter this to any block you wish. The drawing shown in figure 2 was drawn using Basic Lightning, which stores its high-res screen under the Kernal at 57344 ($E000).

You can retrieve the high-res screen data from any memory block, but if you store your screen in the block starting at 49152 ($C000) it will overwrite Multi Dump!

*See listing on page 102*

**Figure 1**

```
MULTI DUMP
PRINTS HIRES & CHAR SCREENS

GIVE NO. OF SPACES (0-40) 0

NARROW LINE FEED OK? Y/N Y

LINE FEED REQUIRED? Y/N
```

Figure 2

## Simplifying Multi Dump

You can load and run programs 1 and 2 each time you want to use Multi Dump, but it is much more convenient to store the machine code as a program and load this automatically every time you run the set-up program.

To do this you need to modify the set-up program by loading it and adding the following lines:

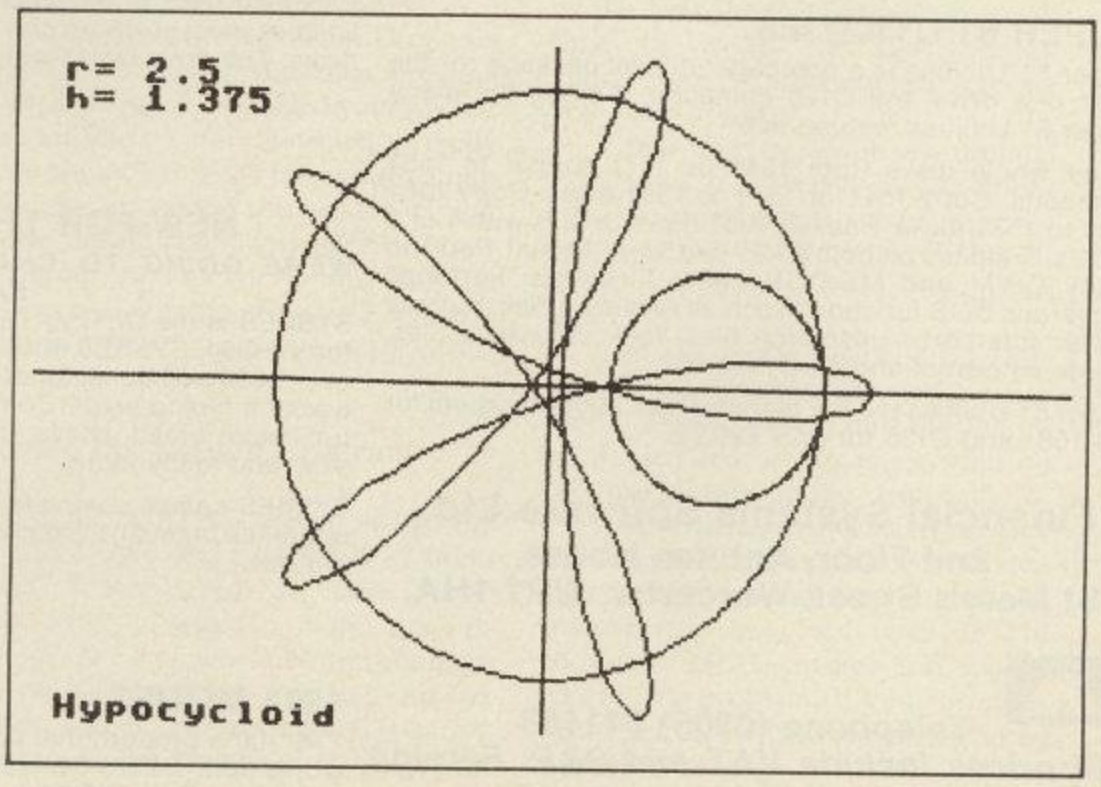

```
30 A=A+1:IFA  1GOTO130
100 IFA  GOTO130
110  IFPEEK(52654)=27AND
PEEK(52655)=51GOTO130
```

and for tape users:

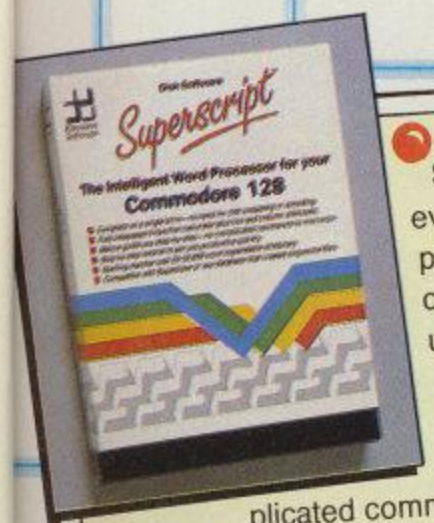

```
120 LOAD "MULTIDUMP/C"
```

or for disk users:

```
120 LOAD"MULTIDUMP/C",8,1
```

# The most powerful productivity software ever developed for your computer

SuperScript gives you everything you need for professional word processing in one easy to use package. Its menu command structure puts you immediately at ease, with no complicated commands to memorise, yet SuperScript combines business-style editing, spell checking, calculator, row and column arithmetic and full mail merge facilities. The phrase glossary feature enables you to store whole passages of text, or command sequences and recall them with a simple key.

Commodore 64 disk **£24.95**
Commodore 128 disk **£29.95**

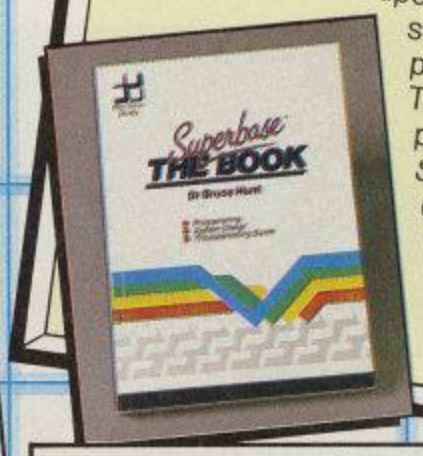

Superbase is the most powerful database system ever developed for 8 bit computers. Why? Because not only can you access its commands from menus but you can string them together with BASIC commands to form your own complete programs. Superbase can import data from and export to other programs via sequential files. In addition the C-128 version will load together with the SuperScript word processor to create a completely integrated office system.

Commodore 64 disk **£24.95**
Commodore 128 disk **£29.95**

The in-depth guide to using the Superbase system, from first steps through to advanced programming techniques. The wealth of hints, tips and practical examples makes *Superbase*: The Book required reading for anyone working or contemplating working with Superbase.

194 pages **£11.95**

SuperDiskdoc is the ultimate Commodore disk utility program, and the best protection there is for your valuable data. Zoom in on the bytes on your disk, interpret them in hex, ascii or plain English, make any changes you want, then replace them. SuperDiskdoc brings you extra security. You know that in the event of an accident to your data you have the best tool available to repair the damage.

# KEEP IT SIMPLE!

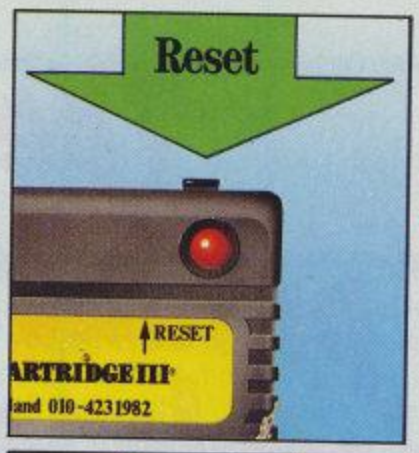

## THE FINAL CARTRIDGE III®

**A POWERFUL 64K ROM BASED OPERATING SYSTEM FOR THE C64 AND C128**

Easy to use WINDOWS and PULL DOWN MENUS allow you to select with either mouse, joystick or keyboard more than 60 new COMMANDS and FUNCTIONS. Various PRINTER-INTERFACES, a BASIC TOOL-KIT

Comfortable ML MONITOR including 1541 drive access and sprite-editing, a NOTEPAD/WORDPROCESSOR with proportional characters, 2 DISK LOADERS with speeds, up to 15 times faster and a state of the art FREEZER. Transform your Commodore into a complete new - AMIGA LOOK ALIKE - system.

# WINDOWS

## THE FINAL CARTRIDGE III®

The high-resolution bit mapped windows are selected from a menu bar. An unlimited number of windows can be open on the screen at the time. The windows can be freely moved on the screen.

The following windows are already implemented in ROM:

**PREFERENCE WINDOW**
Selects: mouse port, joystick port, mouse speed, screen colours, pointer clours, keyboard click, keyboard repeat.

**CALCULATOR**
Complete simulation of a LCD-calculator. Input either with mouse, joystick or keyboard. The numeric key-pad of the C128 can be used in C64-mode.

**NOTE PAD**
Easy to use wordprocessor with proportional characters enables you to store and print small notes, letters, etc.

**DIRECTORY WINDOWS**
Enables you to open directories from different disks and drives, sort and print directories.

**DISK WINDOWS**
Load, Run, Rename, Validate, Scratch, Initialize, Fast format disks.

**TAPE WINDOW**
Activates fast and normal modes.

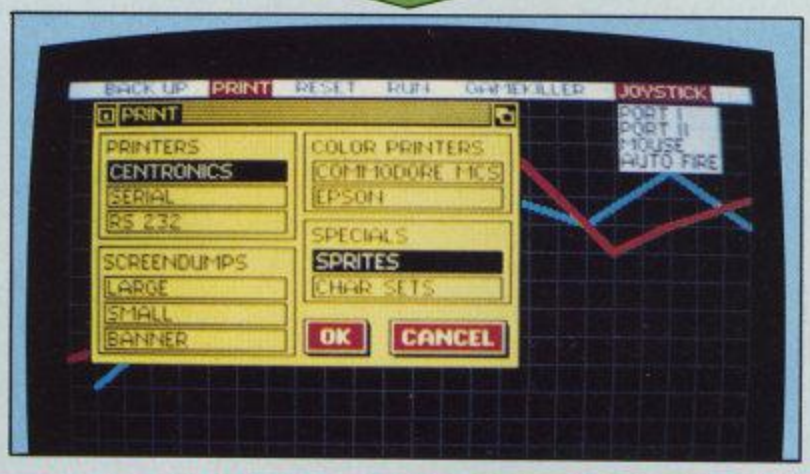

**PRINTER WINDOWS**
Select different printers, such as Commodore serial, Centronics, RS 232, Colour printers.

**REQUESTER WINDOWS**

**DISC BASED USER WINDOWS**

**CLOCK**
Real Time Clock, with Alarm.

# FREEZER MENU

## THE FINAL CARTRIDGE III®

**Innovative hardware, combined with smart software, allow you to freeze and continue every well-known C64-program.**

**Freezer options include:**

**CENTRONICS/SERIAL/RS 232 SCREENDUMPS**

● Full A4 printing ● Variable printsize ● Colour printing ● Sprite printing ● Reverse printing ● Colour changes.

**GAMEKILLER**

● Kills sprite to sprite ● and/or sprite to background collision ● Can be started at any point in your game.

**AUTO FIRE**

● Transforms a normal joystick to an advanced auto fire engine.

**JOYSTICK PORT CHANGER**

● Never blow up your computer again by changing joystick ports while the C64 is running.

**BACK UPS**

● Disk to disk ● Tape to disk ● Disk to tape ● Back up files are packed and reloadable without the Final Cartridge III ● 60K in 15 sec. (disk) ● Exits to Monitor or Basic.

**ML MONITOR**

Comfortable ML monitor.
Does not reside in memory.
Functions include:
● Scrolling up and down ● 64K ROM/RAM access ● Sprite editor ● Character editor ● Drive monitor ● Fast loading and saving ● Printer driver.

# PULL DOWN MENU

## THE FINAL CARTRIDGE III®

**Almost all commands and functions that are not activated by windows can be selected from a menu bar, which appears on top of the screen after pressing the fire button, either in Basic or from the freezer. The following Basic Toolkit and keyboard extra's are included:**

● Renumber ● Auto ● Delete ● Old ● Help ● Kill ● Find ● Replace ● 24K extra RAM for Basic ● Append ● DAppend ● DSave ● DOS ● Monitor ● Drive monitor ● Sprite editing ● Centronics interface ● Fast format ● Low Res screen-dumps ● Plist ● Scrolling up and down ● Stops and continues listings ● Programmed functionkeys ● Packer/Cruncher ● Hex to decimal conversion ● Pokes, syscalls and variables may all have Hexadecimal values ● Trace, Dump, Order, Mem.

**FINAL CARTRIDGE** is a super powerful Utility/Backup Cartridge to give your 64/128 **AMIGA LOOK-A-LIKE SCREENS** Plus backup power and unmatched Toolkit!

When reviewing **FINAL CARTRIDGE III, Comodore Computing International said,** "This product is so versatile, so easy to use, it deserves the highest commendation. If you want probably the best utility around check out **FINAL CARTRIDGE III**."

# Label Linker

*Learn the secret of labelling for BASIC programs which allows easy appending of separate modules*

*By David Kelsey*

Although BASIC 7.0 provides many excellent commands to allow structured programming, it leaves a little to be desired on the statements which provide line numbers. It is always a nuisance to have to guess the line number that you want.

Suppose you want to jump to a subroutine, which you haven't coded yet you must guess the line number that you think you might start coding at. Almost always, this is not the case.

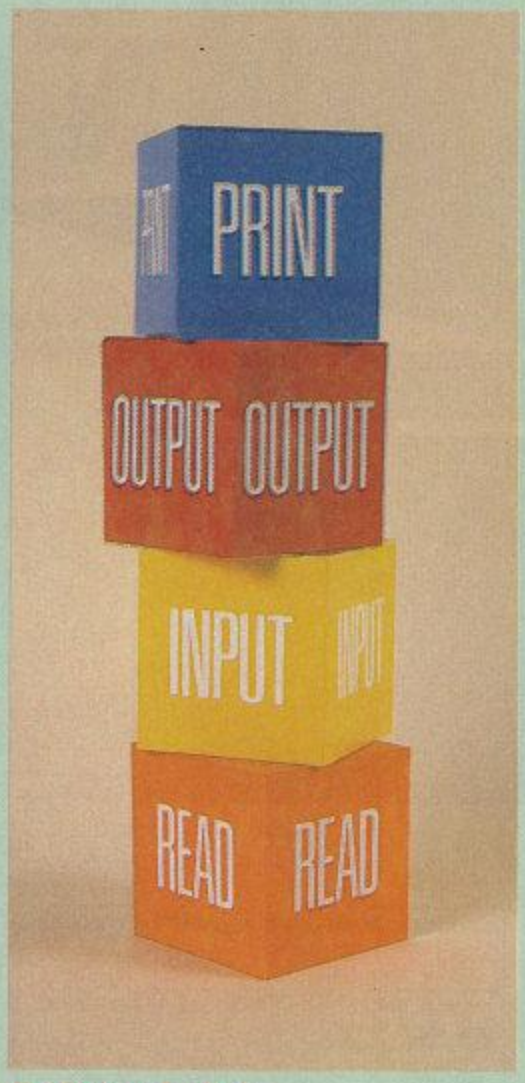

It would be so much easier to type 'GOSUB "CLEAR SCREEN" ', then later define the "CLEAR SCREEN" label to denote that the following code is where this GOSUB is pointing to.

Another useful feature would be if this subroutine wasn't actually in the main program, but was the name of another subroutine which was stored on disk or tape.

This would provide the user with the ability to call subroutines which had been previously written and tested without having to retype them in.

This would then allow libraries to be built, and if you update one of the library modules, all programs using it will be modified without having to alter all programs. All you have to do is relink them.

All this provides more facilities to do structured programming and to encourage better programming techniques.

## Defining Labels

As already described, we use labels instead of line numbers for statements such as GOSUB, GOTO, TRAP, RESTORE etc. This is done by just replacing the line number with text. The text must be enclosed by inverted commas, e.g. GOSUB "TEST PRINT"

We also need a way to define which line numbers refer to labels, and this is done by using the REM statement. The following example shows how to define a label:

REM $"CLEAR SCREEN"

The text within the inverted commas is the label, and the $ signals the program that this text is a label.

There are restrictions put on labels, and the first of these is a label cannot be greater than 16 characters. Also you must define a label as you cannot just GOSUB"".

## Linking

You can just have one program which uses labels referencing lines in other places within the same program, but the Label-Linker allows much more than that.

It provides the facility to join several separately saved programs and create one large BASIC program. Not only that, but you can reference a label from one program which has been defined in a totally separate program. This means however that you cannot use the same label name in two different program modules that you

want to join, as the Label-Linker will not know which one you are refering to. This process of joining is called LINKING.

The separate programs that are to be linked together need not neccesarily be complete programs, but could just be small subroutines or even just blocks of DATA statements. These programs are called MODULES.

The Label-Linker will require the names of the modules that you wish to link, and the order that you give them, will define the order of the final BASIC program.

There is one extra facility that the Label-Linker provides. If you have defined a subroutine, and saved it, instead of having to give the subroutine a label at the beginning of the routine, you can just reference this routine by using the name you have saved it under as the label name. For example, if the routine was saved under the name "CLEAR SCREEN", then all you have to do to call this routine would be to:

```
GOSUB "CLEAR SCREEN"
```

No 'REM $' line is needed in the routine.

"CLEAR SCREEN" is treated as a label, and so must be unique. An error would result if you have a line 'REM $ "CLEAR SCREEN"' in any of the program modules as well as a program name.

While coding a program using labels, it is still possible to renumber the program, but obviously any statements with a label will remain unchanged.

Below is a listing of this type of use. It has three separate modules which are described under their own headers.

**"MAIN"**

```
10      DIM A(20,15)
20      RESTORE "SCREEN
        DATA"
30      FOR L1= 0 TO 20
40      :FOR L2=0 to 15
50      : READ A(L1,L2)
60      : NEXT L2
70      NEXT L1
80      GOSUB "CLEAR SCREEN"
90      GOSUB "PRINTER INIT"
100     GOSUB "CALCULATE"
110     etc
5140    REM $"CALCULATE"
5150    etc
5200    RETURN
52100   etc
```

**"SCREEN DATA"**

```
10      DATA 192,193,155,etc
20      DATA etc
30      DATA etc
```

**"PRINTER CONTROL"**

```
10      ...
20      ..
30      ...
40      GOSUB "CALCULATE"
50      ...
60      ..
100     REM $"PRINTER INIT"
110     OPEN4,4,7
120     PRINT # 4
130     RETURN
140     REM $"PAGE ADVANCE"
150     ST$=CHR$(147)
160     GOSUB "PRINT ST$"
170     RETURN
```

**"PRINT ST$"**

```
10      PRINT # 4,ST$
20      PRINT#4
30      RETURN
```

Note that you can link program modules or just data modules. There is a danger with data statements. If you include a module which reads its own data statements, and you have another module which reads data statements, then there is the possibility that the modules could start reading from the wrong position or the wrong set of data statements. To deal with this situation, the RESTORE statement can be used to inform BASIC where to start reading from. The RESTORE statement also works with labels as shown in the above example.

## Using the Label Linker

Type in the program 'DATA-LOADER', and save it under that name. Then type in the program 'BOOT.LOADER' and save it. Type RUN "BOOT.LOADER". The loader will generate the required program, and save it to disk under the name 'LABEL LINKER'. To then execute the label linker type... 'BLOAD "LABEL LINKER", B1:BANK1: SYS8192'

The Label Linker requires certain information. This will be prompted to you.

The questions are:

'Start address (1C01) ?'

This allows control of where the final BASIC program will be stored in memory. The practical use of this is to allow code programs to be stored in the lower half of memory, with the BASIC program above it. Then your BASIC program can tell these machine code routines. It also lets the user use memory not usually reserved for BASIC. (e.g. the section at $1300).

The default is the usual start of BASIC text '1C01'. Once you have saved the program, and reset the computer, if you use the DLOAD command, then the program will be re-loaded at wherever the BASIC start is, not at the address you may have linked it to. This won't affect the actual BASIC program, but it won't be in the part of memory you want it. To get over this, you can either re-direct the start of BASIC using the LOADER programs given, and load using DLOAD as usual, or you could use the BLOAD command, which will place it in the area in memory that you specified when running the Label-Linker. However, because BASIC hasn't been told where this program starts, it will either not recognise that it is there, or you will just get rubbish displayed when you try and LIST it:

'Display link map on scn or ptr (s/p)?

At the end of the linking, a link map is produced (this is explained later). This tells the system whether you want to output the map to the printer or screen.

If nothing is entered or an unrecognisable character is entered then the output is defaulted to the screen. From here, all that is required are the modules to be linked. The first prompt is:

'ENTER MAIN MODULE NAME >'

This asks for the main program controls and the use of the external subroutines.

The prompts are as follows:

'ENTER MODULE NAME >'

These are the names of the programs containing the subroutines. Just pressing enter on any of these prompts will start the Label-Linker processing, producing the final 'object' program.

Both the entries for 'MAIN MODULE' and 'MODULE' names are the same. If you just enter the filename, then it will try to load from disk, device 8. However the medium where the modules come from can be varied. A prefix can be given in the form of 'p:Filename', where 'p' is the device where the module comes from, and 'filename' is the name of the module to be included.

The following table gives the possible options for devices:

| P | Device Number |
|---|---|
| | |
| a | disk device 8 |
| b | disk device 9 |
| c | disk device 10 |
| d | disk device 11 |
| t | tape device 1 |

It is possible to add devices onto this, and define your own prefixes, for example a virtual (RAM DISK) disk at device address 12 could be given a prefix of 'h'. This is described in the expansion section.

Note that whatever order you give the program names, they will have the same order in the final complete program.

When the Label-Linker replaces labels with line numbers, it doesn't necessarily replace it with the line number that the label is defined on. It replaces it with the first non-REM line number after the label, for example:

```
150  GOSUB "TEST PORT"< -----
```

This line is replaced by:

```
GOSUB 1090
1040 REM $"TEST PORT"
1050 REM THIS SECTON OF THE
1060 REM PROGRAM TESTS TO
SEE
1070 REM IF A PORT SIGNAL HAS
1080 REM HAS CHANGED.
1090 PP=PEEK(DEC("DD00"))
```

## Link Map

This just gives some general information about what has been done. In the above coded program, the following link map would be produced:

| Label Name | Type | Line No. |
|---|---|---|
| main | extrn | .... |
| screen data | extrn | .... |
| printer control | extrn | .... |
| print st$ | extrn | .... |
| calculate | intrn | ...., |
| printer init | intrn | .... |
| page advance | intrn | .... |

The '....' just refers to the fact that a line number will be displayed. It doesn't matter for this example what they are.

The line numbers say what line number this label is replacing, not where the label definition can be found. Remember that when linking, the Label-Linker locates the first 'non-REM' line after the label definition.

## Messages

The Label-Linker has a lot of error checking, and will display any relevant error messages. These are as follows:

**device 'x' not present** – this means that a device which has been assigned the prefix 'x' (x being just an example) is not communicating with the computer.

**file 'example' on device 'x' does not exist** – the file name example could not be loaded as the file couldn't be found. Or no disk is in device 'x'.

**'x' has illegal device number** – a prefix has been defined with a device number which isn't in input medium, e.g. you might have selected the device number for the screen. It isn't possible to load from the screen.

**no memory left to load 'example'** – all memory has been used up; cannot load this module, or any other module after it. You can either reduce the size of the program, or the BASIC start address.

**unknown error on loading 'example'** – the file 'example' could not be loaded due to some kind of error, not listed above.

**line no. '11111' in module 'example' contains unresolved reference** – the module 'example' could not be renumbered because the line '11111' has a statement which refers to a line number which doesn't exist in the module.

**over 65535 lines in complete program, unable to continue** – while joining the modules together, the number of lines so far exceeds the maximum possible in BASIC. Lines would have to be concatenated to reduce the number of lines in a module. (I would be very surprised if someone made this error.)

**unable to update following line, too long** – the line listed below cannot be updated because when the labels are replaced by line numbers, the line is too long to cope with. Another way this error could occur is if you have entered a line using the shorthand method, which allows longer lines to be entered. If this error does occur, then the offending line will have to be split into two separate lines. Also note that the line has been renumbered.

**unable to update lines due to lack of memory** – while trying to replace labels with line numbers, all of memory is used up. This is not easy to solve.

**an unknown error has occurred during renumbering or trying to replace a line** another error, not mentioned above has occurred (should never be displayed).

**no label defined in line below** – the line displayed has a statement which can have a label, but there are no characters within the inverted commas, e.g. GOTO "" will cause this error.

**label too large (>16) in line below** – a label has been defined or used which is greater than 16 characters.

**label 'example' already defined** – the label example has been defined at least twice. You are only allowed unique labels within the whole of the program. You cannot use the same label in different modules.

**no line number, label or statement** – a statement requiring a line number label or more statements, hasn't got any, e.g. 10 IF A=1 THEN

**Label 'example' not defined** – the label 'example' has not got a definition in any of the modules, i.e. there is no line with the statement REM $ "EXAMPLE"

## Labeling Statements

The following statements can have labels instead of line numbers:

GOTO
GOSUB
ON GOTO
ON GOSUB
RESTORE
RESUME

Commands such as RUN, LIST etc CANNOT have labels, even if they are used within a BASIC program.

These commands can be expanded on. If new commands are added to the BASIC, then if these new commands use TOKEN crunching, then they can be added to the Label-Linker.

See the section on 'ABILITY TO UPGRADE' for further information.

## Final Notes

During the time the Label-Linker is running, NEVER press RUN/STOP and RESTORE. If you have typed something wrong, or you just want the Linker to stop, then you will have to use the RESET button.

Another thing that you may find useful, is to set up the boot sector for the Label-Linker. To load, all you

would then have to type is 'BANK 1:BOOT'.

It is possible to have the Label-Linker permanently loaded, but you would have to redirect the start of BASIC variables to at least the address $3090.

The Label-Linker does its own renumbering, so when the program has been linked, you will find the line numbers in steps of 1, starting at 1. If this is not satisfactory, you can just RENUMBER the program.

## Ability to Upgrade and Patches

As mentioned earlier, it is possible to upgrade this program to allow for extra devices or mediums for modules, and it is also possible for it to cope with extra commands which may also use line numbers. All the statements within BASIC 7.0 which use line numbers have been included, but if BASIC is expanded, then this program can cope with this. However, the new BASIC statements must be token crunched for this program to recognise it, and as one token labels are not possible in BASIC 7.0, then two token labels must be used. As the tokens $fe and $ce have to be used to their full extent, expansion has been based around the user of these. For example, if you add a new BASIC statement 'CALL', and when interpreted by the BASIC which has been modified, it is crunched to the tokens '$fe $44', then these values could be added to the Label-Linker such that if a label was placed after 'CALL' instead of a line number, then the Label-Linker will recognise it as a label, and replaced it with the appropriate line number.

A utility program has been provided to do this for you.

## The Utility Program

The utility program has been supplied in separate modules for you to use the Label-Linker on.

Each program should be saved under the names given in the comment block at the start of each module. The four modules are:
UTIL.MAIN
UPDATE DEVICE
UPDATE COMMAND
TXTCNTL.MOD
(This is a simple text input and display module which could be modified and incorporated into your own programs if you wish.)

Run the Label-Linker as explained above. Press enter for the first prompt, and select screen or printer for the link-map. When prompted for the main module name type 'UTIL.MAIN' and press return. For other prompts, type in the following order:
UPDATE DEVICE (return)
UPDATE COMMAND (return)
TXTCNTL.MOD (return)
(return)

It should now say linking in process.

If all goes well, the messages 'pass 1' and 'pass 2' will be displayed, and then after a little while, the link map will be printed.
Save the program under the name 'LABEL-UTILITY'
Enter and save the program 'BOOT.UTIL'
To run the utility, type RUN "BOOT.UTIL"
A menu is displayed giving the options available.

The first option will let you change the device prefixes with their corresponding numbers.

The existing ones are displayed and the program prompts for a prefix. Once entered, you give the device number you want to correspond to that prefix.

If you enter a prefix which already exists, then the device number will be changed to the new one just entered. If you entered a new prefix, and there is room in the table, then it is added to the table, with its corresponding device number.

To exist this change, just press enter when prompted for prefix.

The next two options are used to update the Label-Linker to recognise new commands which have been wedged into the operating system. The way commands are stored in BASIC programs are in the form of special values. As BASIC 7.0 used all the single byte values possible for their commands, it had to use double bytes to define commands. The commands can be expanded on, using the same technique, but if a new command uses line numbers, then you may want the Label-Linker to know about these new commands.

The current table contents are displayed, and the program prompts for a command. The two commands are 'i' for insert, or 'd' for delete.

When either option is given, the program then prompts for a token. If possible, the program then tries to either insert or delete the token from the table. If it can't then a message is displayed saying what went wrong. To exist this screen, just press enter on the command line.

Option E ends the utility, and updates the Label-Linker. It renames the current version to 'OLDLINKER' deleting any previous copy, and puts the new version onto disk under the name 'LABEL-LINKER'.

## Cassette Based Users

This program has been designed with disk users in mind, but should be possible to update the loader, and the BASIC programs for use with a cassette recorder. The main changes being the BLOAD, and the BSAVE commands. The BLOAD could be replaced with 'LOADF "",1,1' and specifiying the particular bank to be loaded.

BSAVE is a little more difficult. Either the monitor has to be used, or there may be ways of calling the save routine and specify the required parameters with BASIC, a programmers reference guide would be helpful.

## Extra Program

Included also in this package, is a simple compactor program. It will remove all REMs and spaces from a program. For example it could be used to remove all the labels and the 'object' program by removing all REM statements if desired.

The loader is similar to the one used by the Label-Linker, and will require a 'boot.loader' program. Type in the loader, then save it under the name 'COMPACT.DATA'. Load in the program 'boot.loader', and change the 'DLOAD' command to 'DLOAD 'COMPACT.DATA'.

Once this is done, save the loader under the name 'BOOT.LOADER2'. To execute the program, just type 'RUN "BOOT.LOADER2"'. The loader will place the compactor in memory, then save a copy to disk under the name 'COMPACTOR'.

## Using the Compactor

To load, type BLOAD 'COMPACTOR',B1
To remove just spaces, type 'BANK1:SYS28672,1,0'
To remove just REMs, type 'BANK1:SYS28672,0,1'
To remove both REMs and spaces, type 'BANK:SYS28672,1,1'

# Games Reviews

*Check-up on the latest releases with our up-to-date reviews*

## Star Wars

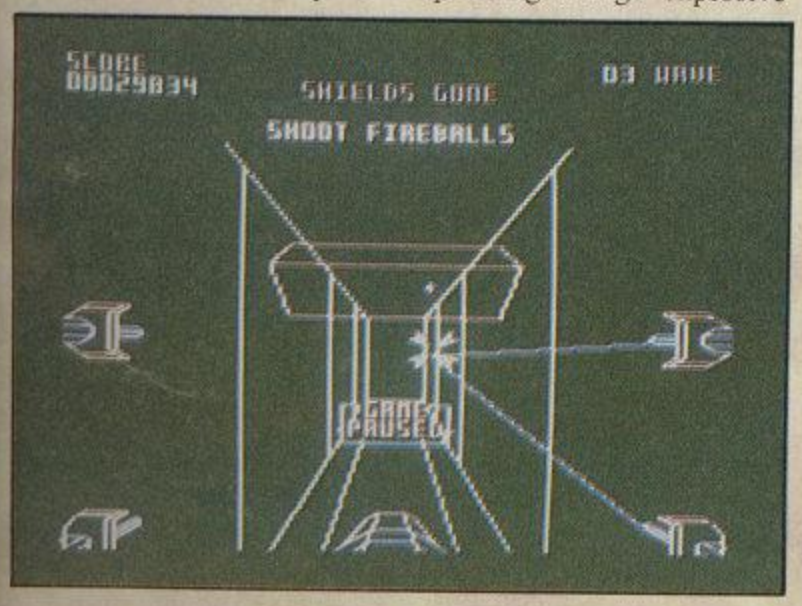

It's amazing how many of the Christmas games were based on arcade originals. Having drained as much as possible from Trivial Pursuit, Domark are now getting back into action games with Star Wars.

The game replays the closing scenes of the first Star Wars film as Luke Skywalker homes in on the Death Star to serve the coup de grace to the Empire's evil plans.

The game opens in deep space as Luke tackles the Tie-Fighters of Darth Vadar's fleet. There's nothing particularly innovative about this phase and the whole section strongly resembles an update on the old Startrek action screens.

Eventually the battered attackers make a run for cover and you can enter the second stage of the battle as you pick your way through the laser defence towers on the Death Star's surface. As you steer your X-Fighter through the forest of towers you have to blast the laser mounts on the top of each of them to pieces, in a poor man's Starglider scenario.

The final attack phase is the gauntlet run over and under the obstacles ranged along the trench which leads to the Death Star's exhaust port. Depositing a high explosive charge into the exhaust port at the end of the trench will finish the Empires war machine and complete the game.

The game isn't spectacularly innovative but its strength lies in the difficulty levels. There are three of these – for some unfathomable reason numbered 1, 3 and 5 – the lowest level is fairly easy and omits the tower challenge but the highest level is sure to get the adrenalin rushing about.

For me, Domark often fall short of the mark but if you want sweaty action you might like to give this a try.

---

## Gary Lineker's Superstar Soccer

Football games seem to divide into two groups – you either play on the field where the International Soccer is King or watch from the sidelines in games like Football Manager. Gary Lineker's Superstar Soccer is set to change that as you not only select your team but also decide tactics and play either as the centre forward or the goalkeeper.

To play the full game you will have to buy a disk drive or be content with the severely cut down cassette version in which you only play the games themselves and miss out on runs in the cup, promotion and relegation battles and the chance to improve your squad by training, delving into the transfer marker or recruiting new players!

The cassette version does have all four league tables and starts you at the foot of the fourth but all you can do is play single games against human or computer opponents. These football matches are six aside games which can be speeded up to 15 times normal time. You can control either the

goalkeeper and hopefully make spectacular saves or lead the goal rush as the centre forward. The other four players are computer wingers and defenders whose actions depend on the tactics you select whenever the game stops because of a goal, halftime or a throw in, corner or goal kick. These tactics determine how much of the defence will push up to support the forwards and whether the computer players will pass to you, the centre or shoot at goal themselves.

To take a shot you simply hold and release the fire button when the gauge at the top of the screen shows the direction you want to shoot in. To pass you must tap the button and push the joystick in one of eight directions that determines whether you pass the ball to a specified player, the nearest player or to an area of the field. The fireworks really start flying when the ball is in the air as a press of the fire button will make your player leap to head the ball or even execute a perfect overhead scissors kick to send the ball flying past the keeper into the back of the net!

If you have the disk version then each game becomes more meaningful as a step nearer promotion or towards cup glory. You can select any team to play in either an English or American league and play 7 or 15 games each season even though there are 16 teams in each division.

To improve your chances you will need to strengthen your squad of ten players by trading them for more skillful players or spending some of your initial 250 trading points to send the entire team to a training camp or recruit a youngster and spend trading points to build up his skill. At the end of each season you'll receive more trading points depending on your achievements during the past year.

The object of the game is to win as many games, championships and cups as possible in nine seasons to achieve the highest possible rating. The complete disk version combines both football playing and management in a game for the first time that suffers only from snail-like disk access times. However, even with these considerable delays this is better than the cassette version that has been cut into oblivion and is like playing football with one leg tied behind your back! The marks below are for the disk version. Cassette owners should half the marks as they only get half the game! **T.H.**

## Out Run

Well, US Gold, you told us that this was the 1987 blockbuster, the Christmas number one program and other such hype. In the main you told the truth but there are probably many disappointed purchasers bored after a day's hard driving.

Out Run is certainly an impressive piece of programming but stripping away the original arcade game's high quality graphics and all-action console leaves a fairly average road racing game.

The conversion includes all five of the original routes but, once you've mastered the art of overtaking, most of the game is played with the accelerator hard on the floor and all you have to do is admire the scenery.

For real Out Run junkies there's a freebie audio tape from the original which resembles the musical wallpaper currently softening the sound of fast money being cashed up at the local hypermarket. Perhaps there's a hint of a Freudian slip in its inclusion with this package.

If you haven't seen Sega's Out Run – the arcade machine – it involves a cool dude in a hot red roadster with his seat cover by his side. After selecting a five section route he has to get through the traffic to complete each stage within a time limit to win the race and gain the adulation of the crowd.

This is accurately reproduced in the US Gold conversion but it lacks the spark of challenge and addictiveness to make it a worthy contender for the Number One slot. The programming has obviously been tackled with care to include as much detail from the original as is possible on the C64. Unfortunately, the compromises necessary to make it fit into the memory has not been compensated for and this leaves a feeling of nice program, shame about the game!

With Out Run we were promised great things but it's amazing how some promises produce things that grate. Out Run addicts may like to buy this as a memory of the great arcade game of 1986 but, like most memories, its's a poor substitute for the real experience. **A.C.E.**

## PETER SHILTON'S HANDBALL MARADONA

Named after the "hand of God" incident during the England Argentina 1986 World Cup match, Peter Shilton's Handball Maradona gives you a new perspective of the football field. You've scored winning goals for your club and country, even managed your favourite team to league and cup glory and now here's your chance to save the day by wearing the number-one shirt.

You begin the game as a class "A" goalkeeper and have to build you way up to class "P" (for Peter Shilton?).

Once you have selected the team you're playing for you are presented with a menu that allows you to practice a few saves, play a game or try for a skill upgrading.

If you play a game you see your goal, which is badly defended by two useless defenders and between one and three opposing forwards. These players will pass or dribble the ball before they shoot at goal so you have to be ready for anything. You even have to save corners, free kicks and penalties. Pushing the joystick left and right will move your keeper across the goal with other directions sending him diving to all parts of your goal.

It will take some time for you to anticipate the forward's move, but when you do you'll save some of the eight shots at goal and your side will win. The result doesn't seem important and is mainly there for interest and to give you practice. Your most important task is to improve your skill rating.

Skill upgrading is harder than it seems as you have four shots to save but you fail as soon as you let one in. Succeed and you'll get a four digit code which you can enter when you load in the game another day, so you don't have to replay your hard fought levels.

Although there isn't much to the game (that's all folks) it is suprisingly addictive.

**T.H.**

## X-15 ALPHA MISSION

I've always had a weakness for vector graphic games, ever since I saw Star Wars in the arcade, and so I was delighted to see X-15 Alpha Mission on release. Although the graphics are nothing special, the game is none-the-less addictive.

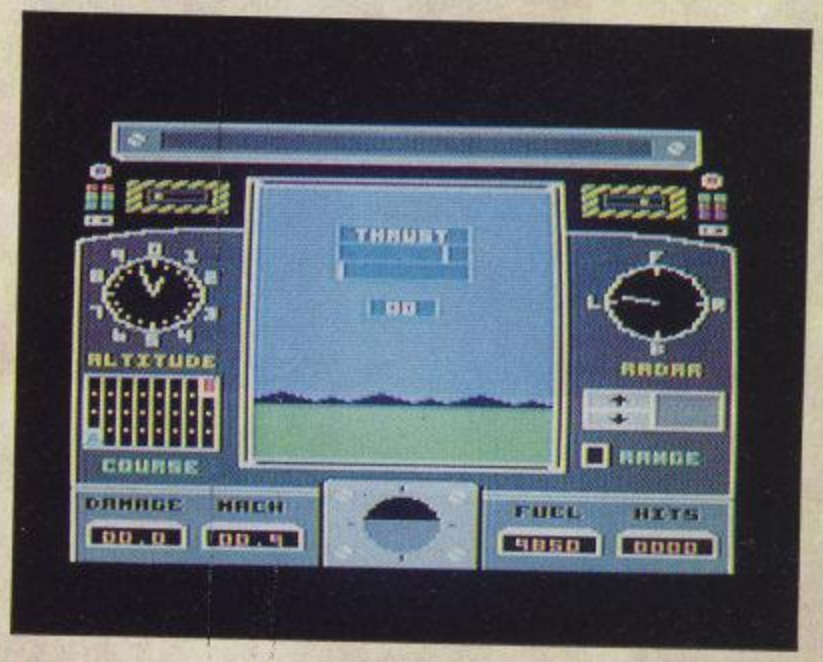

You play the part of a fighter pilot, who possesses great war tactics. NASA have started to receive strange messages that were bouncing off the Moon to Earth, which turned out to be ransom demands for huge sums of money. The threats were from terrorists, who were manning a space station, and would blow up major American cities and microwave President Reagan unless they were given the lolly.

Blowing up cities is okay, but microwaving President Reagan? You're sent to destroy the space station straight away.

At the start of the game you have to launch the ship into the sky which is quite easy and can soon be mastered. There are three levels of play that involve flying, the first being below cloud level, where you must shoot down helicopters and dodge nuclear missiles.

The second level takes you up into the clouds, where I became airsick, but soon got over it. You just shoot and dodge again, but this time it's against jet aircraft and kamakarzi gliders.

Finally we have space, where no one can hear you scream – hmmmm. Spaceships are now your enemy and will attempt to blow you apart. They look rather like tie-fighters from Star Wars, but then again, this is distributed by Lucas Films. Anyway, once you've blown up the tie-fighters you must then avoid asteroid belts and dock with the spacestation, where you have to enter a special code in order to access it. The code number is given at the beginning of each game, and changes each time you play.

When you have docked at the space station, a small capsual is released from your spacecraft and must be guided gently down onto the surface of the space station while avoiding the small meteors.

Once this is done and you have landed you can then begin your assault on the space station.

Eight robots emerge from your space-ship and you take control of each one in turn. There are eight different movements (functions) for the robots, but as they are not listed in the instructions, you will have to learn them off by

heart. These skills can be used to jump other robots and burn away rubble from the planet's surface or even self-destruct, but it is wise to do this only when you are near a weapons system, which are poles that stick out of the planet. You must destroy eight of these in order to blow up the space station, and as you can guess, you can't afford to lose any robots.

Phew, as you can see, there is a heck of a lot to do in this game, although going by its graphics, it is still pretty average looking, and the sound is nearly non-existant, but it's still a very playable game – take it from me. **K.R.**

## ALICE IN WONDERLAND

Beware the Jabberwock my son, the Jaws that bite the claws that catch. Beware the Budget bird and shun this dubious Bug Byte catch!

I did think of starting this review with J'accuse in large capital letters as APS subsidiary Bug Byte appear to be trying it on and possibly contravening trading standards. Is this a rip off or is it a rip off?

It's golden oldie time at Bug Byte and they've dredged this one up from the days when the voice synthesis would be described as revolutionary and the graphics as stunning. Today it merely looks sad.

'Curiouser and curiouser', exclaims Alice at the beginning of the game and on finishing the first very, very dreary level the curiosity was revealed. This is not the Audiogenic multi-load cassette, it's (shock! horror!) the first part of the disk version! As Alice reaches the end of her perambulation along a dragon infested mountain road the screen incites player one to switch on his disk drive to load part 2.

Despite my efforts I could not find any scenes to match those depicted on the cassette insert, a possible case of misleading packaging, methinks.

The tawdry gameplay involves Alice on the mountain road being assailed by flimsy, ill-advised and ill-defined dragons who vanish into some dragonesque afterlife if they touch her. Every now and again the dragons change colour to herald the arrival of the Jabberwock. After the next colour change Jabberwock arrives looking like a fearsome cockatoo and far less dangerous. Now is the time the dragons have waited for as they home in to devour one of Alice's six lives unless Alice gets the Jabberwock first. Wow!

Even less frequently, wandering doors travel across the screen. If Alice fails to jump over a door she's whisked back to the start of her walk. Gasp!

Come off it APS. Try and pull the wool over someone else's eyes. Malice in Videoland is a video nasty; avoid it at all costs but let the Mad Hatter and his friends have the last say:

'This piece of rudeness was more than Alice could bear: she got up in great disgust, and walked off; the Dormouse fell asleep instantly and neither of the others took the least notice...'

## EDDIE KIDD'S JUMP CHALLENGE

My best advice is not to buy it. This game refuses to lie down and die...sorry, it refuses to lie down; it died a long time ago.

The mature principle of this game is to ride a motorbike up a ramp and jump over a row of cars. I always understood the principle of acceleration to be one of steadily increasing momentum. Obviously I was mislead by my physics teacher, as according to this game, acceleration is one of steadily

increasing noise. As Eddie 'speeds up' the background passes by at the same constant rate and goes on and on and on...

An age later you meet the ramp, take off, and fight to control the altitude of the bike to make a safe landing. If you fail, Eddie limps off the screen and you're back at the start of your run up.

If Eddie Kidd is a modern day Rocker, then Ricochet seems to have gone off theirs with this escapee (surely it's not a release!). Martech must be laughing all the way to the bank after off-loading this pile of tripe onto Mastertronic.

## ARCADE CLASSICS

They say that nostalgia isn't what it used to be. Was it really that long ago that we gasped with amazement at delights such as Space Invaders and Asteroids?

For any of you who have forgotten what computer games used to look like, Firebird have assembled four different classic titles in one game.

Space Invaders is the daddy of all shoot-em-ups. Left, right and fire are the basic controls, as you dodge from under the barricades to wipe out row after row of aliens as they pursue their ever-relentless path down the screen towards you.

Big fleas have little fleas upon their backs to bite 'em. Little fleas have littler fleas and so *ad infinitum* – the basic principle of Asteroids. You are trapped in a giant storm of these huge space boulders, and as you shoot at the rocks they break up into medium sized rocks which in turn become small rocks. Contact with any of them, not surprisingly, is lethal.

The other two games are, somewhat disappointingly, two player games. Surely there were enough one player games around or, failing that, computer opponents available. Snakes is an attempt to make your opponent crash into you or move back on himself, before he does likewise to you, and Space War is a variation on the same theme except that you must also avoid the sun's gravitational pull.

Four games for two quid seems to be great value for money but the games are extremely crude by today's standards, even if they are fair copies of the originals. Unless you are desperate for one of these oldies to complete your collection, stay well away. **G.R.H.**

## COIN-OP CLASSICS

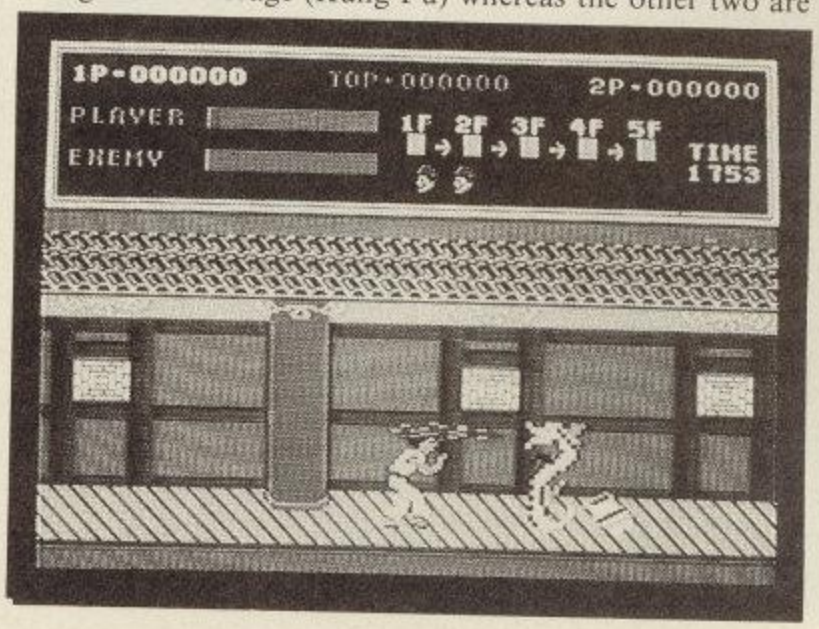

In this age of compilations, US Gold have bundled three of their coin-op conversions together for the price of one game.

Kung-Fu Master is, as you might suspect, a martial arts beat-em-up. As usual, there is a princess who has got herself captured, and it is up to you to organise a rescue. Various henchmen block your way together with fire breathing dragons, killer bees, psychopathic dwarves and exploding vases. If you make your way to the end of a level, a final confrontation with a guardian is all that stops your progress. This is a reasonable game of its type, despite some blocky graphics.

Breakthru sees you trying to penetrate 400 miles behind enemy lines in order to rescue one of your country's top secret agents. You are armed only with a jeep but it does have the advantage that it can fly and jump short distances. There are five different terrains for you to cross should you accept the mission.

Crystal Castles is, despite the hype accompanying it, no more than a glorified Pacman derivative. Bentley Bear must collect gems while avoiding the various nasties. There are tunnels and lifts which can aid or hinder you.

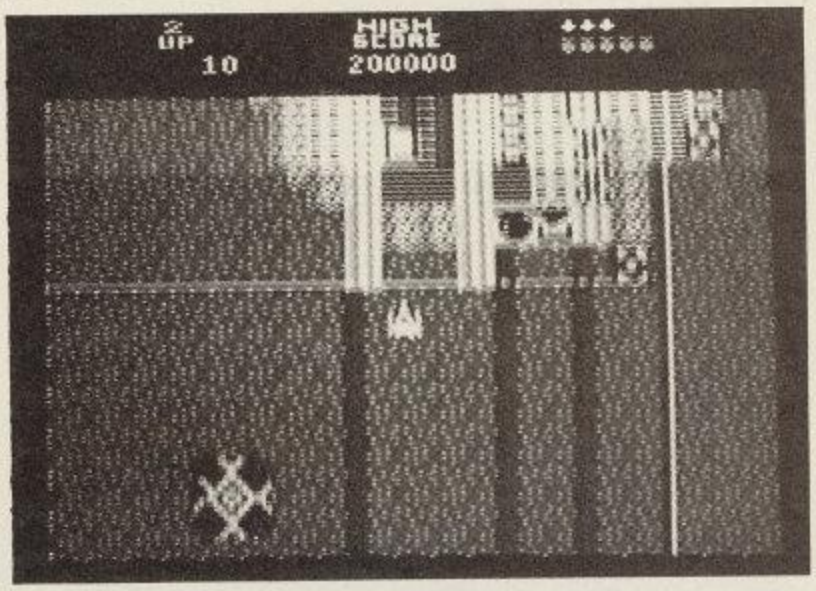

Although compilations appear to be good value for money, you have to watch what you are getting. Here, only one game is average (Kung Fu) whereas the other two are

downright awful. If you were keen on the arcade originals, then you might consider buying this but otherwise, I suggest you give it a wide berth.

**G.R.H.**

***Title:*** *Coin-op Classics.* ***Supplier:*** *US Gold Ltd, Unit 2/3 Holford Way, Holford, Birmingham B6 7AX.* ***Tel:*** *021-356 3388.* ***Machine:*** *C64.* ***Price:*** *£9.99.*
***Originality:*** *3/10.* ***Playability:*** *4/10.* ***Graphics:*** *4/10.* ***Value:*** *3/10.*

## THE LAST MISSION

Zzzzzzzzzz. zz,zzz, yawn, oh, hello, sorry about that I've just been playing The Last Mission, the latest conversion from US Gold.

The story has it that you are an outcast, driven from your home galaxy – why I don't know. Anyway it goes on to say that you must return to your home, blow up the aliens that are trying to take over your homestead. If you do this you will no longer have to live in exile, you would be a hero. So how can you refuse – you jump into your super-star fighter and zoom off to your home planet.

On arrival you discover that you have zoomed into a really poor arcade conversion. Your home looks like it's made out of lego bricks and the space ships are bland and small, but the music that your on-board computer is playing is quite good.

Scattered around the planets are various silos which when shot release a powerful weapon of some kind – simply fly over these to pick them up, then it will be fitted to your ship.

I cannot recommend this at £9.99, it just isn't up to scratch. It could be different if it was a budget game, but as it stands I would leave well alone. **K.K.**

***Touchline:***

***Originality:*** *5/10.* ***Playability:*** *4/10.* ***Graphics:*** *5/10.* ***Value:*** *3/10.*

## SWAMP FEVER

David Bellamy may get into some scrapes but never as bad as this. Professor Oddbod has taken on the mission to recover as many rare Aisuru flowers as possible from the irradiated swamps of Florida.

The radiation has mutated the swampland creatures into man-eating monsters with a penchant for professors. Armed only with a flamethrower the professor has to fight his way through 35 swampy screens picking flowers as he goes.

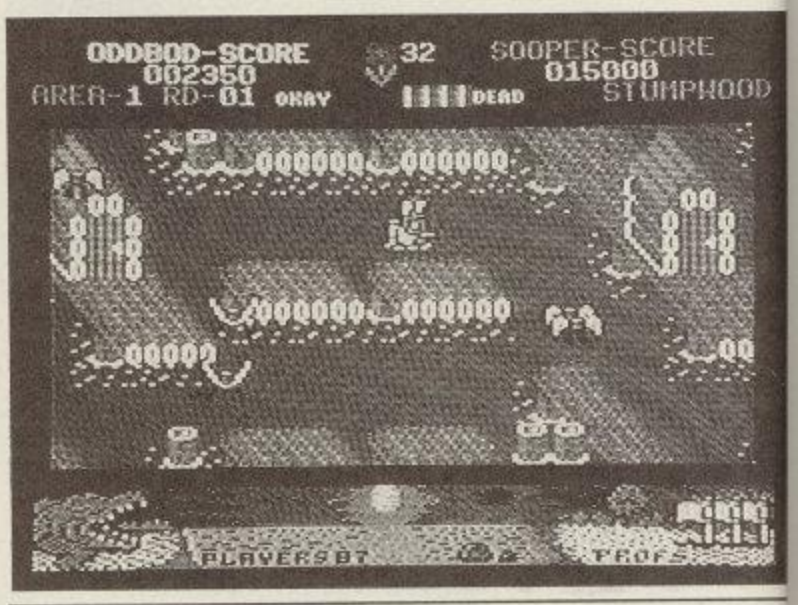

Every now and again the swamp fever infected creatures swarm around the professor and he has to flee onto a neighbouring swamp to free himself of the threat.

The scenario seems quite respectable but the game itself is awful. What programming there is has been proficiently executed, but each swamp maze falls into one of two types each variation round these limited themes differing only in graphics design. The two basic maps of the maze do not seem to vary at all.

Players have basically ended up with a two screen game with very limited action. Even at budget price this is an extremely disappointing product.

## PIR SQUARED

Well, I expected another run-of-the-mill arcade game that was nothing to write home about, but I was pleasantly surprised with this recent release from Argus Press. The first thing that struck me about the game was the colourful and well-drawn loading screen, but I still remained sceptical. As the game loaded, rather a nice tune played, and growing curious I started the game. I found it to be a highly playable addictive arcade game that was also quite frustrating.

You play Professor Brain Storm who is just about to appear on TV to give a lecture on geometric solids. So then you are feeling pretty confident when suddenly your mind

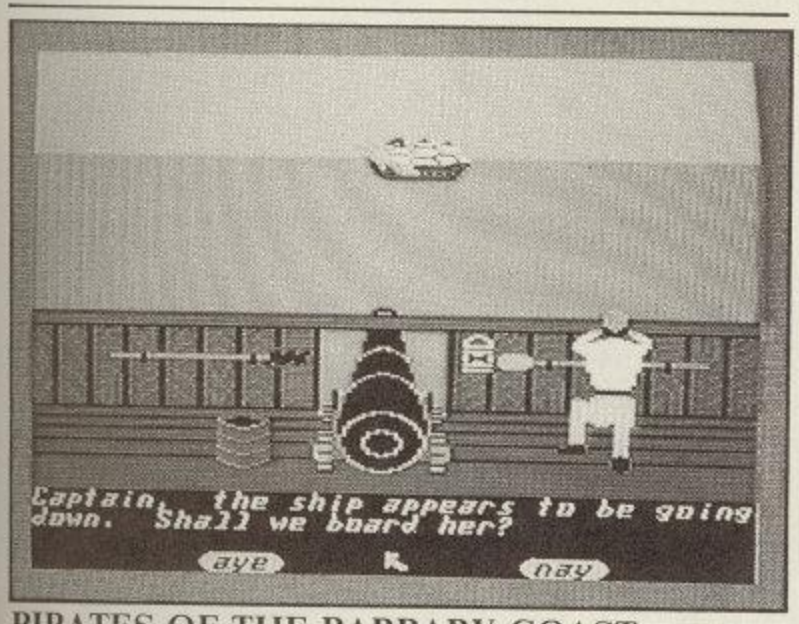

begins to wander. What lousy timing – the credits are beginning to roll and the intro. music playing and your standing there daydreaming. "Oh no, it's happening again," it must be nerves as now poor old Prof. can hardly remember his own name, let alone a formula. However hard he tries to think he can't get back to normal. All hope is not yet lost however as there's now a chance for Prof. to reconstruct his memory, and hopefully recover the formulas.

That's where you come in – move around the cogs and wheels of the Prof's brain, recovering the lost formulas and collecting various other useful items such as calculators which increase your speed. As well as useful aids, there are also objects which hinder you (stray thoughts) like ice cream and naked women (you fibber: ED).

So there you have it, a pretty enjoyable game from Argus Press Software, but I feel the asking price is a little too expensive at just under a tenner. If you are rich go and buy it, if not have a look at it if you can. **K.R.**

***Touchline:***

***Title:*** *PIR Squared.* ***Supplier:*** *Argus Press Software, Victory House, Leicester Place, London, WC2H 7NB.* ***Tel:*** *01-439 0666.* ***Price:*** *£8.99 (Ca) £12.99 (Disk).* ***Machine:*** *C64.*

## PIRATES OF THE BARBARY COAST

Your daughter has been kidnapped and is being held to ransom by the evil Pirate Bloodthroat. You have thirty days to come up with 50,000 gold pieces or else.

You have two main courses of action available to you. You can try and raise the money by buying and selling goods along the North African coast and you can try and find the secret lair of Bloodthroat and destroy him.

The game is a combination of strategy and action. Starting off in a friendly port, you have to hire and fire crew, keep them fed and juggle the supplies within your hold, haggling with merchants for the best prices. If your ship is damaged, you can take the opportunity to get it repaired for payment of the appropriate amount of gold. Choose your destination and set sail.

Once at sea, you have to prime your cannon ready for any potential action. This involves selecting which of the fifteen guns are to be loaded and following a set pattern of inserting the powder, tamping it down, putting in the ball, etc. If all goes well, the cannon indicators change colour. Get the sequence wrong and you have to start all over again.

When in combat, you will need to find the right elevation for your guns with a few test shots before moving along the row of cannon trying to sink the enemy. Of course, he is trying to do the same to you and any hits by him will result in your crew falling by their guns. If you succeed in defeating the enemy, you get the chance to plunder for information or gold, but not both.

Despite the large colourful graphics, the game is slow to play and a little difficult to control despite being icon/menu driven. If you are looking for a strategy game, then Pirates from Microprose is infinitely better. If it is action that you want, again, there are better games on the market. Pirates of the Barbary Coast seems to fall between two stools.

## GAME OVER

What an original title, Game Over – it's clever, yet so simple. I bet loads of software houses are kicking themselves saying 'why didn't we think of a title like that?'

But what is the game like? Well, I can assure you, you will not be disappointed. You play Arkos who lives far away in a distant galaxy and is a faithful servant to the Beautiful but totally evil Gremla. Arkos is a ruthless cyborg-type being, who used to follow Gremla's every command, but as her power grew so did her greed, and now Arkos can take no more.

He joined the rebel forces in a plot to overthrow her and

to destroy her palace for good.

When the attack was agreed, Arkos decided it would be best if he went alone, after all, he knew the route to the palace and could fight better than any mortal. The other rebels agreed and Arkos set forward to rid the planet of the evil Gremla. Kill everything that gets in your way, and anything that doesn't!

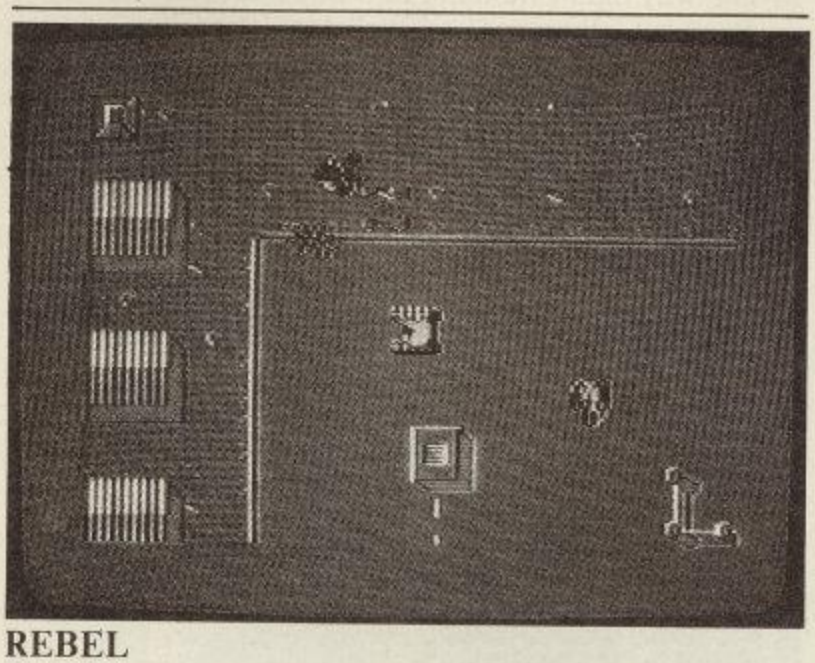

The game comes in two parts; the first being the planet Hypsis. This is the easy part as you only need to reach the 11th screen to confront and kill the mighty Orko, who was once your friend and is now your worst enemy, and must be shot many times before he dies.. Progress will not be granted until he is dead.

To aid you on your quest you will find red barrels, which must be shot three times to unleash their contents. Some contain various weapons and power hearts, but there is a chance that a mine lies inside so you have to watch your step as the mines are very deadly. They can only be passed by wearing a field of force (also found in the barrels) or jumped, but this may be impossible in some situations.

The backdrops and aliens are very nicely drawn and this makes the game a lot more playable, however you may soon find yourself cursing this game as it can sometimes prove very hard, and especially frustrating. That said, it is still a nicely presented game that plays reasonably well with some nice sound and spot effects thrown in. However, it could have been improved with in-game music and better control of the main character, but you can't have everything can you?

## REBEL

This new game from Virgin has a really good story line; try and imagine this. You are forced to work for a plantation centre, where the shifts are long and hard, and no-one knows what the word cry means and when you reach just over thirty you are terminated – not very nice, huh?

The new plantation supervisor has decided to try and improve production, which he does by creating a workforce of zombies. Sleep is controlled by him, and you sleep in a special chamber which makes you sleep and wake up in the morning. There are countless pills to be taken but these do nothing much, just slow your brain down – they are known as the Tanq-u-pills and they slowly take away your resistance. Our hero has managed to stop taking these pills and now realises the danger.

This is where you step in; you have to guide a tank containing our hero, around the giant base switching the solar panels so they will direct the power beam into a selected wall on each level. When you are satisfied with this, fire the lazer beam and hope you got it right. If you do you'll go onto the next level, if not you'll lose a life.

As you advance through the levels, the backdrops change but that's about it, you will get the same aliens, same task, and so after a while you may find yourself getting bored. This is a shame as the game has some wonderful graphics, but stumbles on the gameplay side. If this had been a fiver or less it would have been good, but at just under a tenner it's not really very good value.

## NICK FALDO

Here's your chance to hack your way through the rough and bunkers of the Royal St. Georges course in Sandwich.

An icon drive golf game, you must select your club (and suffer the sarcastic comments of your caddy should your choice differ from his own not so humble opinion), direction and strength of the shot. Your player lines up the shot automatically and wacks the ball according to your predetermined instructions.

The upper portion of the screen gives a top down view of the hole and if like me, your shots are nowhere near the fairway, you can call up a map of the surrounding area to show where you are in relation to the green.

All is well until you actually land on the green and your ball is lying a couple of feet from the hole. Distinguishing between the hole and ball becomes next to imposible and I have actually putted six from a short distance.

This would have been a reasonable if somewhat simplistic simulation but for the putting fiasco. If you want a really good golf game, then save your money and buy World Class Leaderboard instead.

# Amiga News

*Find out what's been happening in the Amiga world*

*A 20Mbyte SupraDrive hard disk unit*

## Hard News

A new series of Amiga compatible hard disk systems have been launched in the USA by the Supra Corporation. The high performance systems incorporate a hard disk drive in one of four capacities, SCSI expansion port and provide RAM expansion capabilities.

The four drives have 20, 30 60 and 250 Mbyte capacities and retail in the States at $995, $1195, $1995 and $3995 respectively.

The SupraDrives plug directly into the Amiga 500 expansion socket and feature Supra's own high speed data transfer interface. Burst date transfer speeds of 250Kbytes per second can be achieved to complement the fast seeking hard drives.

RAM boards of 1 or 2Mbyte capacity can be plugged into the hard disk units and the separate power supply of the units is used to power the expansion boards to avoid overloading the Amiga.

## New Lasers

Two new laser printers are ready for launch from Brother and Star Micronics.

The Brother HL-8 has a printout speed of eight pages per minute. Access to five resident fonts may be supplemented through two front cartridge slots making it suitable for desktop publishing applications.

The speed of the Brother machine is matched by Star's LaserPrinter 8. There are eight fonts resident in the machine, cartridge expansion capability and user definable characters can be specified at the cost of a small part of the internal 1Mbyte memory. LaserPrinter 8 can operate in both landscape and portrait formats and up to 64 different fonts can be included on a single tape.

Despite all of these facilities the price has been kept to a relatively low £2,195 including a year's on-site parts and labour warranty.

## CRL's Amiga Range

CRL have announced their plans to release three new games for the Amiga: Blackshadow, Tau Ceti and Academy.

In Blackshadow you command a spacecraft which flies over a vast, heavily armed asteroid. After running the gauntlet of defence systems, knocking out as many of the weapons as possible, the final target on each level has to be destroyed.

Tau Ceti and Academy have already been seen on the C64 but the Amiga versions promise extra excitement and realism.

Tau Ceti takes place on a decimated planet and your mission is to close down the malfunctioning systems which have defied all attempts to previous adventurers. In realistic 3D vector graphics, you must search the cities in your skimmer craft and collect the rods which are needed to shut down the massive fission reactor which fuels the planet.

Academy is the follow up to Tau Ceti which allows you to design your own skimmer. After graduating from the Academy, you are able to tackle one of 20 missions bust success will rely on the design of your skimmer.

All three CRL games have a retail price of £19.95.

*ALL PRICES CORRECT AT TIME OF GOING TO PRESS*

*Ron (left) and Jean Baker receive their prize from John Speller, MD of MicroPro International*

## Wonderful WordStar

Celebrations were called for when MicroPro passed the three million sales figure for their WordStar package. The crucial landmark was due to be released in late 1987, so a special promotion was embarked upon with the promise of a fantastic Far Eastern holiday for the lucky purchaser of the three millionth copy of the wordprocessor.

The actual purchaser of the momentous package could not be accurately assessed so anyone buying their copy of WordStar during September and October became eligible for the Celebration Draw made at London's Hurlinagham Club on November 27th.

The lucky recipient of the first prize was Ron Baker of Romford. Ron works for British Telecom International as an implementation and design engineer and it was in this capacity that he registered the software on BTI's behalf. The prize is a holiday for two which he will share with his wife, Jean.

The second prize, a compact disk player, was won by Allan Green from the Department of Physics at Queen Elizabeth's Hospital, Edgbaston. An Olympus Trip camera formed the third prize awarded to Julian Wates, Senior Lecturer in charge of Computing at North Hertfordshire College.

The three million sales figure in less than a decade by MicroPro is stunning when seen on a daily sales basis. To reach this volume of sales, almost 1000 WordStar units will have been shipped out every day! Perhaps we'll see the four millionth sales in May or June 1990.

***Touchline:***
***MicroPro International**: Haygarth House, 28/31 High Street, Wimbledon Village, London SW19 5BY. **Tel:** 01-879 1122.*

## Invisible Arts Package

The Amiga notched up another TV success before the end of 1987 when Channel 4's Eleventh Hour sereis presented Gorilla Tape Productions' programme Invisible TV featuring effects generated on an Amiga running Electronic Art's DeluxePaint II.

IVT, a fictitious TV station, was used as a vehicle to expose the 'propoganda' which veils itself in the guise of popular entertainment. The message was spread by using examples of a typical day's broadcasting in which different types of programmes were all given the hip hop scratch treatment.

Special effects were created by computer graphic artist Gary Whiteley who has used the Amiga in several previous productions as a suitable alternative to graphics production equipment costing many times that of the computer. DeluxePaint II provided a suitable environment for the production of the extraordinary effects which Whiteley visualised.

***Touchline:***
***Electronic Arts:**Langley Business Centre, 11-49 Station Road, Langley, Berkshire SL3 8YN. **Tel:** 0753 49442.*

## ProWrite Update

A new version of ProWrite – V2.0 – is available which has many added features. Of special interest is the self selection default specifications. All start up parameters such as font, justification, spacing and colours can be predetermined and several preference files can be stored and loaded whenever required.

Graphics and text dumps have been greatly improved giving speeds which may reach ten times that of previous versions. In text mode the program will run as fast as the printer will allow. High resolution printers can be fed with a smoothed output which permits true letter quality printouts from any of the Amiga fonts.

Printouts can be set to any width through ProWrite 2.0 using the sideways printing capability for extra wide paper.

HAM pictures, such as those created with DigiPaint, can be loaded into ProWrite and resized.

Paragraph formatting options have been incorporated to allow one and a half spacing, fixed line height and the inclusion of a blank separating line between each paragraph. The finished paragraphs can be sorted into ascending or descending order to assist in creating a table or for editing the custom user dictionary which complements the fixed 95,000 word spelling checker.

Character, word, sentence, paragraph, picture and page counts can be easily accessed for full document information readouts.

These are just the main improvements, many more alterations and find tunings have been incorporated to increase the power of this vastly improved product from New Horizons Software.

# Amiga Gossip

The recent news about virus disks has set the Amiga world jittering with fear, one software producer told me that nearly 40% of his disks were "infectd" with a virus that occasionally popped up with the message "YOUR MACHINE HAS BEEN INFECTED".

In America – where the virus is believed to have first started – there are no less than three major disk infestations – all of which recognise the other viruses and react accordingly. For instance, one disk virus forces another (found in DEC USA – Palo Alto) to pop up with the message "A Virus... Yummy! Dinner Time"

## This ain't funny anymore

I was recently talking to Darryl Mays, a British software programmer hoping to start breaking into the Amiga Software scene with "Antrax" (or should that be Anthrax?), he was grieving about the the fact that one of these viruses got in the way of his custom disk protection system, his fear as that unless you switch the Amiga off between every disk swap, the chances are quite high that a similarly protected disk will get fiddled around with, thus rendering it useless.

## Amiga Wars

In a meeting, George Lucas was reportedly asked if he had considered supporting the Amiga for some of the new mega-games doing the rounds, apparently he came up with the cracker: "Rounded down to the nearest million, there are no Amigas in the world!"

## C64 Emuluation – again

I have just found out that a third C64 emulator is nearly finished, it will be shown around the major hardware companies soon. Called "Card128!" this item is aimed fairly and squarely at Amiga 500 owners who have no memory expansion whatsoever – it plugs under the machine (where an additional memory card is normally fitted).

Sporting a Z80 and a 6512 CPU, this machine emulates a C64 and a C128 with "as near as dammit" software compatibility. There is a port for the 1512 disk drive, the drive controller software is reportedly inside the Amiga.

Naturally this is pure gossip, but rumour has it that Card128! works like MS-DOS on the Amiga 2000, i.e. it has a window on the workbench that can act as a task under intuition! If this is the case, then transferring files from one machine to another should be a cinch.

## Take your Pick

There were a few red faces at COMDEX recently as rumours were flying around that the XENIX operating system had been developed as an alternative operating system to AmigaDOS in case the Amiga's own one proved to be bug ridden! Mind you, I also heard that TRIPOS developed in the UK by the same team that did Sinclair's QL) was on the cards as well!

The last I heard of the XENIX rumour was when I heard a CBM man at the bar saying – "well if we have developed it, then it wouldn't work anyway, but if we haven't, then we sure as hell will soon!"

Latest news is that the A2024 colour monitor is on show in America; released to coincide with COMDEX, this little beastie has 1000 x 800 resolution. All of the pictures were pin sharp and there's no interlace resolution, CBM were pretty cagey about the price, and as for the case – YUK! I have seen better crafted monitors at the Atari stand – sorry guys, but it's an ugly S.O.B!

## CBM Digitiser?

A new video digitiser called "NYIT Live!" was quietly being shown by a dealer (with a CBM badge!). I gather the plan is to get the Amiga audience "primed" by using products from Mimetics and Newtek, as soon as everybody is familiar with igitizing hardware and software, CBM will jump in with a licenced NTIY "Live!" card and clean up on the professional market. Only a pre-production model was on show, but it looks promising as it runs at 30 frames a second with 7 bits for each RGB colour, as opposed to the 3 or 4 you get with "ALIVE!"

Before you start thinking of replacing your 68000 inside the Amiga with a 68010, I got a call last week from a guy in Utah bitching about the fact tht none of the Psygnosis game will work with it fitted – I haven't been able to get any response from Psygnosis on this one yet, but then it's your fault for changing the Amiga's CPU isn't it?

This is a great little rumour. Did you know that the developers of the Amiga fought tooth and nail to have PC slots in the A2000 – yet the American reviewers slated it for this omission – isn't life tragic!

commodore

Image captured in 16 grey scales

# DIGIPIC

## NEW Capture real time images from any PAL source FAST

**DigiPic** will capture a single picture field in real time (1/50th of a second) from your video source.

Save all, or a clipped part of a standard 320 × 200 picture in IFF format. Take up to four images randomly or in sequence before storing and working on them.

**DigiPic** works with the standard 16 level Amiga grey scale and it includes a unique 32 level Grey Scale adaptor – the change is dramatic! Alternatively you can produce a still picture in 32 COLOURS by using the three red green and blue colour filters provided.

With the powerful, menu driven software you can modify a picture captured by the digitiser. Manipulate intensities, and intensity gradients throughout the image for a clear result. You can vary the contrast range, sharpness, and brightness for a specific effect. Set the grey scale to a small number of steps for a dramatic finish, or use EDGE to produce an image that defines the outline of objects – create your own cartoons!

You can load your **DigiPic** image into Deluxe Paint, DigiPaint, Prism, Superbase Professional, and many other programs for sophisticated graphics applications.

**DigiPic** connects to any Commodore Amiga computer.

INTRODUCING A NEW DIMENSION IN MANAGEMENT DATABASE SYSTEMS

# NOW EXTEND YOUR REACH

Superbase Professional is one of the most advanced databases ever produced for the Amiga™. It represents a technical and commercial breakthrough which will allow you to advance your expectations of a database beyond that of any existing system. Superbase Professional was conceived as a 'no limits' database; your only limitation is the capacity of your machine. Whatever the application, Superbase Professional has the power to achieve it.

**The Graphics Applications Generator**

With the Superbase Professional Forms Editor you can create custom applications relating multiple files. It is a unique graphic design tool used to create forms using patterns, lines, boxes, text fonts, graphic images and fields from any file – in colour. Superbase Forms possess the intelligence to generate linked records, then retrieve and display them automatically without any programming. It is the ideal developers tool.

**Total text integration**

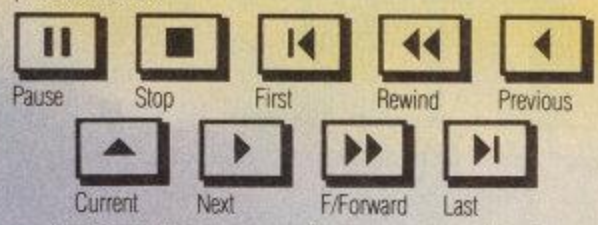

An integral text editor allows a mail merge interface to the database and the ability to link text files to records. The Superbase text editor allows you complete freedom to use any amount of text within your database files or can be used simply for your day to day correspondence and typing requirements. Superbase Professional can search any ASCII text file even if it wasn't created by Superbase.

**Database Management Language**

Superbase Professional's unique Database Management Language gives you access to all the power of your computer. Should you need to, this fourth generation programming language allows you to write entire applications in just a few lines of program code.

**As easy to use as a VCR . . .**

With Superbase Professional you have data retrieval at the press of a button.

The video style controls mean that you can use and preview your data with the minimum of effort.

**. . . with unlimited processing potential**

All the field types of a powerful modern database including date and time arithmetic, cross file lookup, calculation and validation allow you to exploit your data to the full.

Unrivalled ease of use with unsurpassed power: a combination not achieved until now.

**Professional back-up**

Superbase Professional has the full backing of Precision Software's technical team. 20 hours FREE telephone hotline during normal working hours for the 90 days following registration, and Extended Support Schemes to suit all users for purchase after that time.

Minimum System Requirements
Version 1.2 system software
1 floppy disk drive 512K RAM (1 megabyte recommended)

**Price: £249.95** (inc VAT)

Registered users of Superbase Personal write for upgrade price and procedure.

# METROPOLIS

COMPUTER · GAME · OR · REALITY?

Metropolis the game is an interactive experience, the like of which you have not been through before! Only now, with the power of 16-bit has it become possible to take you into the streets of a city which exists somewhere on the dark side of your own imagination. It allows you to walk, talk, exist and die within the confines of an enormous high tech city that hides a macabre secret.

Metropolis the computer program pushes back the frontiers of the possible. It is without doubt an unparalleled achievement in computer entertainment. Its vocabulary exceeds that of the average human being and the artifical intelligence programs are the most advanced anywhere. It has fully digitised conversational abilities and has over 60,000,000 possible responses at its disposal.

**FEATURES**

- **REAL-TIME DIGITISED CONVERSATION WITH**
  - **20,000 WORD VOCABULARY**
  - **60,000,000 INTELLIGENT RESPONSES**
- **STATE OF THE ART ANIMATION**
- **UNIQUELY INTERACTIVE CONTROLS**
- **MULTI-PLAYER GAME STRUCTURE**

Take on the challenge of the century and find out what your machine is *really* capable of – in the heart of Metropolis as you hunt for the answers to the fate of millions!

# Hi Investments

FOR THE AMIGA SERIES

Amiga 5¼" Disc Drive
40/80 Tracks, IBM compatible
RRP £169.95

## GIZMOZ

- "INDISPOSABLE PACKAGE" – 19 DESKTOP ACCESSORIES
- EXCELLENT SELECTION OF BUSINESS PROGRAMMING & PERSONAL TOOLS
- YOUR COMPUTER SAID OF GIZMOZ "....FOR MY DESK AT HOME I WOULD NOT DO WITHOUT IT."
- CONTAINS ICON MAKER/GRAPHIC PACKAGE/CALCULATORS/MEMO PAD/BLACK BOOK ETC
- ONLY £49.95

## PROMISE

- 95000 WORD DICTIONARY
- 18 WORD PER SECOND SPELLCHECKING SPEED
- FEATURES SPELL HELP, OPERATES VIRTUALLY ANY WORD PROCESSOR
- WILL EVEN CHECK PUNCTUATION ERRORS
- CREATES CUSTOMISED DICTIONARY
- £39.95

## OMEGA FILE

- PROFESSIONAL DATABASE & MAILMERGE
- 200 CHARACTERS PER FIELD, 256 RECORDS
- 5000 CHARACTERS PER RECORD
- FULL SCREEN EDITING UP TO 32000 INDEXED RECORDS PER DATABASE
- INCREDIBLY USER FRIENDLY
- OPEN 2 DATABASES AT THE SAME TIME

JUST £49.95

## DRUM STUDIO

- TURNS YOUR AMIGA INTO PROFESSIONAL DRUM TRACK
- INCLUDED 20 DIGITISED INSTRUMENTS
- 10 SONGS AVAILABLE WITH 100 PATTERN CALLS
- 5000 DIFFERENT SOUNDS AT THE SAME TIME
- SCREEN GRAPHICS FOR VISIBLE CONTROL ADJUSTMENTS
- ONLY £39.95

## WINDOW PRINT

- POWERFUL UTILITY THAT ALLOWS YOU TO CAPTURE A SCREEN OR WINDOW IMAGE
- MANIPULATE/PRODUCE A FILE IN IFF FORMAT
- PRINT ANY SIZE COPY OR USE YOUR OWN PROGRAMS IMAGES
- INCREDIBLY JUST £24.95

## HOME PUBLISHER

- POPULAR DESK TOP PUBLISHING
- PRODUCES HIGH QUALITY LAYOUT
- A FAST & EFFECTIVE WAY TO CREATE PROFESSIONAL DOCUMENTS
- 30 DIFFERENT FONTS
- DRIVERS FOR 8,9,16 & 24 PRINTERS
- 1ST WORD, DEGAS ETC COMPATABLE
- FOR ONLY £24.95

## 2 MEG RAM EXPANSION

- MORE SPACE FOR PROGRAM DATA STORAGE
- FASTER PROGRAM EXECUTION
- CAN BE EXPANDED TO 8 MEGABYTES
- AMIGA 500 INTERFACE AVAILABLE FOR £19.95
- £449.00

# Amiga On Line

**Who?** Anyone with an Amiga 500, 1000 or 2000, Kickstart 1.2 only.
**When?** From now on.
**How?** By dialling this number for information: 01 997 2591.

*Compunet* will tell you how to get onto a special bulletin board from which you can download the terminal software. This gets you onto *Compunet* for a look around. At this stage you can register your first subscription online.

## How Much?

The subscription costs £19.99. Most regular users then pay for an 'off peak' rate on top which works out at about £18 per quarter. Otherwise London area users can get onto *Compunet* at 60p per hour. Outside London, with access via the ISTEL network, it costs £4 per hour.

*Compunet* already has a lively Amiga section formed by C64 upgraders with advice, criticism and debate, among other things, on shareware and public domain software. Nor are other computers excluded. Atari ST and PC owners will soon join and swell the ranks. There is even a lively Amiga versus Archimedes battle being waged as I write.

## Window Magic

The terminal software, written by *Ariadne Software* – of 'Kickstart Guide' fame – is brilliant and fascinating to use. It operates in the full multitasking environment, with separate on-screen windows and pull down menus. This means that the Workbench, indeed any software, is available for use while Compunet is online. The prospect is in sight of downloading large files – as programs naturally expand to fill the available memory – in the background while you carry on doing something else!

Within the terminal this feature is used to maintain a directory display in one window while accessing pages of text or running demos in another, the picture window. A third window, the editor, can be opened. The editor can be used offline, the contents remaining intact in the editor while you go online to *Compunet*. While online, the contents of the picture window can be instantly copied into the editor. Any editing done can be accepted for use or rejected, in which case the editor window is restored to its original appearance.

But can an Amiga screen cope with a C64 display? Or are you confined to a special Amiga part of *Compunet*? As you might expect, the terminal software takes care of it, simulating the 64 character set for text based material. It is also possible to save 64 software to disk if you so wish. *Compunet* is a simple way of porting the data between machines. You might wish to convert a 64 BASIC program into Amiga Microsoft BASIC for instance or, less likely, vice versa. Amiga high resolution graphics will also be possible, the date being downloaded for display by the computer.

The items already on the menus when I viewed the development version of the software were LOGON, SETUP, DROP and QUIT and MAIL, CAT, EXECUTE, EXTEND, VOTE (a vital bit of people power on *Compunet)*, ACCOUNT, and LEAVE. Instead of scrolling through and highlighting commands, the Amiga user clicks with the mouse pointer on gadgets. The directory entries can be clicked on to move to a lower level of the directory tree or to activate a demo or set of text pages.

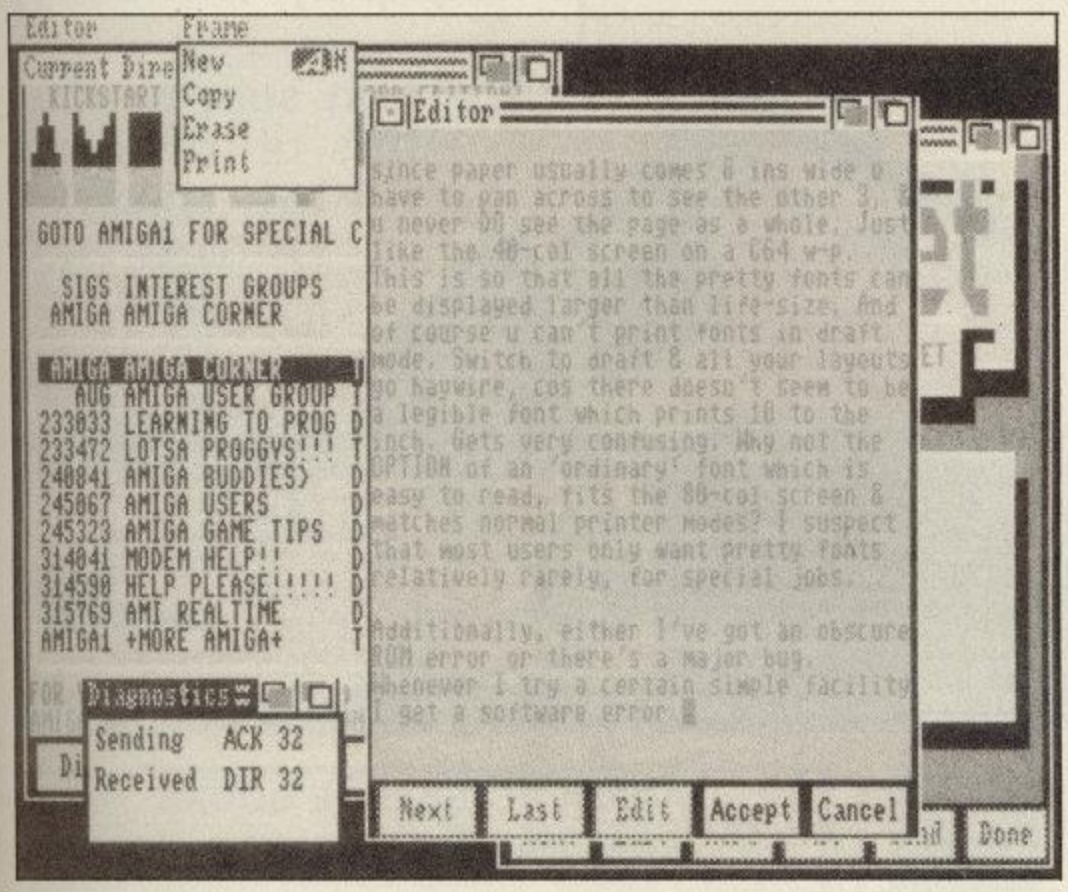

All the features familiar from the C64 are available to the Amiga user, including electronic mail.

## New Features

I mentioned the problem of the sheer size of Amiga programs. *Compunet*

*Amiga owners now have the opportunity to tap into the wealth of demos, utilities, debates and user feedback which is Compunet.*

***By A. Owen***

currently operates at the standard 1200/75 on the Infotrax network. 1200 is acceptable from *Compunet* to the user, but say you want to send something to *Compunet* 75 baus is unrealistic. *Compunet* itself will undoubtedly support 1200/1200 one day when the majority of users have the appropriate modem, but in the meantime a separate 1200/1200 line will be made available for the London area. Amiga subscribers will also be able to send their disks to *Compunet* for them to upload onto the system. Compunet will be offering a modem deal to potential subscribers which will offer, at the least, an upgrade path to 1200/1200.

The terminal is currently 80 column but a 40 column version will probably be developed for those using an Amiga 500 in conjunction with a television. Of course the advantage of being on *Compunet* is that you can update your terminal software from the database when new features are added, software support business users pay £100s for.

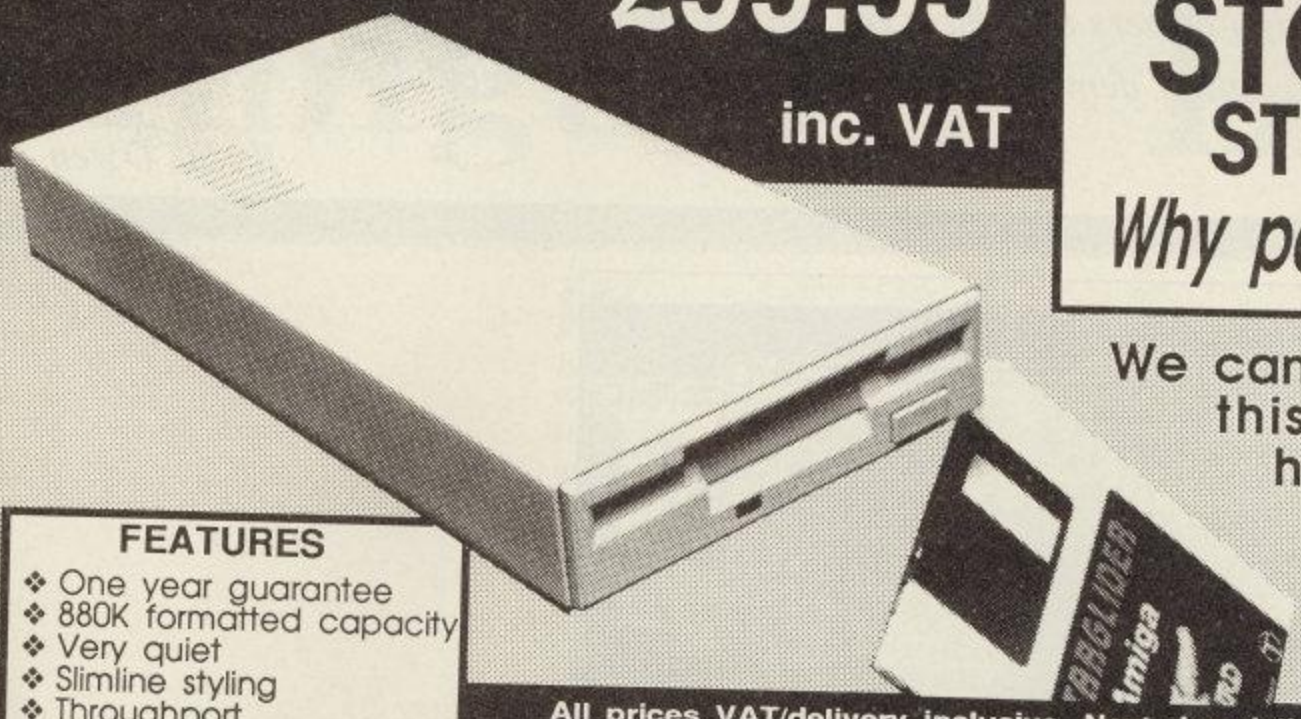

## Conclusions

*Compunet* itself is a very promising resource for the Amiga user. It is likely that the demo and software base will quickly benefit from upgraders, coders and importers of American material. There are already many demos available on disc. If the C64 material is anything to go by – there are well over 1,000 demos, previews, games, music, utilities and art – Amiga owners will have plenty to keep them busy. The editorial policy is to let authors put their own material onto *Compunet*, to monitor its success with other users and, as editor Jane Firbank puts it, to "immortalise the good stuff". Until something even better comes along.

The terminal software is of a very high standard with all the usual features such as resizeable windows, requestors – for a number to dial for instance – and pull downs. I was most impressed with the operation of the multitasking. Ariadne have fulfilled an ambitious design.

# Help at Hand

*Pop-up Utilities to make life easier.*

***By Anne Owen***

Complicated as it is, the Amiga was bound to spawn utilities to harness the 'power' without the pain. I set out to test a few of the latest.

## Zing! Keys

This is not just an add-on for owners of Zing!, a menu/control panel for AmigaDOS, by Meridian Software. Zing! Keys certainly works very well with Zing! but the provision of macro keys for any application, from DOS to Deluxe Paint 2, is potentially very useful for any Amiga user.

Macros are of course available within some software packages, e.g. WordPerfect. Most however contain no such facility. A macro is a series of key presses or commands held together in a form which can be called up by a single key press. For instance, while using the Scribble! wordprocessor, you can press a previously defined macro key to insert a series of 'dot' commands to format your document. Zing! Keys has a number of very useful built-in macros but any number can be defined by the user and assigned to Hot Keys. The Hot Keys is the key combination which calls up the macro function.

An amazing feature of Zing! keys is that you can record events as well as strings of text or key presses. There are a number of already defined Intuition macros which size and move windows with single key presses Mouse movements and clicks can also be programmed into macros.

Macros can be edited saved, loaded and merged. The definitions can be nested, delays inserted and variables introduced, e.g. prompting for a filename from the user, a string which is then entered into a command line.

Further use of this ability to 'record' is made with the HISTORY command. CLI commands are recorded and can be retrieved into a gadget window for editing and reuse. A more unusual use is the SECURITY-LOCK command which locks the keyboard until a password is entered – handy if you have to leave your desk and don't want anyone to tamper with your work.

There's more to Zing! Keys than first meets the eye. For anyone who likes to write their own batch files to configure their system then the programming element will be an enjoyable challenge. Zing! Keys can be used to customise an application for the novice user so that he just has to 'press buttons', or to setup an 'individual' environment. Separate hot key and macro definitions can be saved on any disk, ready for installation.

Meridian's manual is excellent and doesn't hesitate to repeat itself if necessary. There are some nice tutorial style sections.

## Grabbit

This is a simple but useful utility. If dumping screens to your printer is important then Grabbit does a good clean job without crashing other software. Brilliantly presented on screen with good clear messages and help windows, Grabbit is polished software but is limited to the eponymous print screen function and 'Anytime' a colour palette utility. The utilities are installed by clicking on the Workbench icons and, once in place, are available by pressing a simple key combination.

Grabbit accesses the Preferences settings and sends the current screen to the printer. Anytime provides familiar slider controls which effect the colour combinations shown on screen. Knowing how much people like to individualise their colour schemes, I think this will prove a popular feature.

## Gizmoz

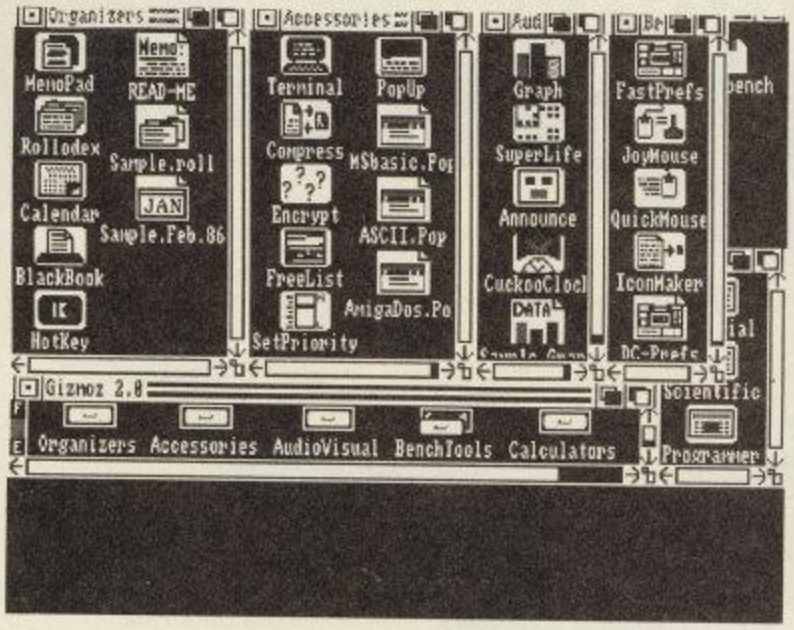

Gizmoz is a different animal. The single disk contains a vast array of programs and utilities, some more useful than others.

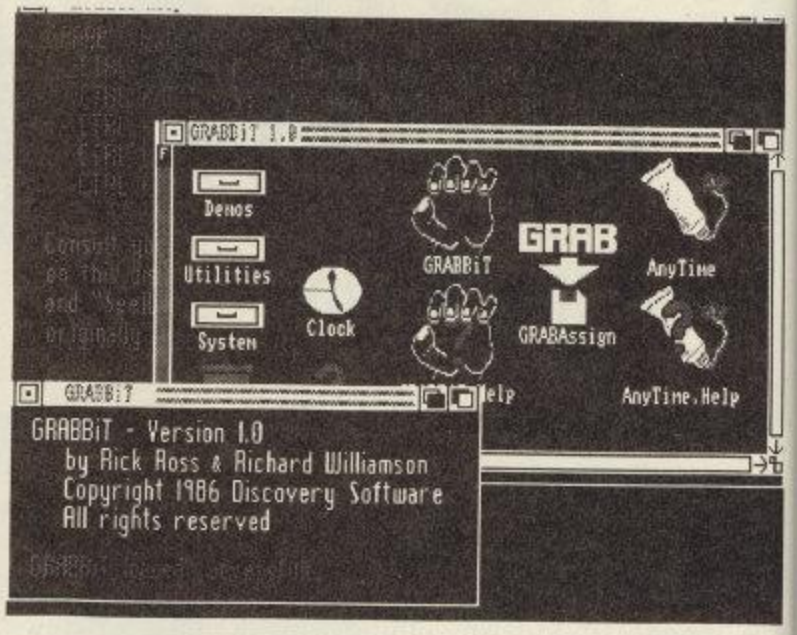

The first thing you do with Gizmoz is open up all the windows to see what you've got, clicking on icons indescriminately to see what's 'underneath'. Some fun things pop up, like the cuckoo clock – sure to replace the boring Workbench clock – but there are alot more rather static and uninteresting windows.

Not impressed? Well, quickly get into the excellent manual and you'll begin to realise that here you have a very workmanlike, even sophisticated, set of productivity tools. The key to the success of this variety of utilities/applications is the way they mesh with the Workbench, their way of working is instantly familiar. The sophistication of Memopad (text), calendar (dates/times) and Rollodex (card index) is internal to each application and shared by each. That is, text on screen can be cut out of one and pasted into another, a very handy integration of data which saves a lot of time. Printing from all three is dealt with by the Black Book tool, which sets up output of schedules, cards and labels.

The calendar can remind you of appointments and the Rollodex can dial a number from a telephone field, via a Hayes compatible modem. A bar, column or pie graph can be generated from a script written in Memopad and pasted in Gizmoz Graph. The resulting picture can be saved as IFF for incorporation into another graphics program. Colours can be chosen and pie segments exploded.

If you are a scientist, there's a

calculator which will work with exponetial notation, give you TAN, SIN, COS, square, square root and muchmore besides. If calculating annuity or compound interest is part of your job, there's a financial calculator – great for keeping track of that volatile share portfolio! And if you're a programmer, your calculator will work in binary, octal, decimal and hex; it will shift and rotate on 4, 8, 16, and 32 bit words and perform logical operations. Copy this one straight to your utilities disk. I opened it up while working on a program in another window.

Gizmoz also contians an array of utilities. FastPrefs lets you save Preference configurations which can be activated by clicking their icon. A library of configurations is very useful if, like me, you keep swapping printers. Joymouse sets up port two so that you can use a joystick like a mouse. Quickmouse adds an acceleration function to the mouse control software. Announce is an improvement over the Workbench speech demo. It translates English into phonemes too – handy if you're programming with TRANSLATE$. Running from CLI, Announce becomes a useful 'command' to take announcements from batchfiles.

Icon Maker turns making an icon into the simple matter of loading an IFF file (created, say, in Dpaint), sizing it and matching the Workbench colours. Next you choose the icon type, device, disk, drawer, etc, and its highlight (when you click on an icon it can be highlighted in three ways, complement, backfill or a new image entirely). Other status information is easily specified and the icon saved for use.

The Gizmoz Terminal will get you safely online to a text based bulletin board or service such as Telecom Gold. For file transfer there is Xmodem, Simple (Xmodem but with the original file length) and Amiga binary. There are six terminal emulations and full control over baud rates, parity and so on.

The Gizmoz Hotkey allow the user to define up to eight hot keys (key press combinations, e.g. CTRL-ALT-Z) and to assign a keyboard press (including HELP, TAB and RETURN) to the key. This definition is known as a macro.

You may find Gizmoz Popup very useful if you are new to the computer. It 'pops up' a card on the screen. Two cards describing Amiga DOS and Microsoft BASIC are available but you can prepare your own cards with MemoPad. There's a string search facility too.

Two, perhaps limited interest, utilities are compress and encrypt. Compress can be genuinely useful for file transfer – as long as the destination has decompress available. Also, in an office environment, encrypt may be a useful disincentive to anyone wanting to peek at your files!

Finally there's a game of Life – well-known and to be treated as a freebie on Gizmoz.

All I can say is 'how did they get it all on one disk?' Some of the utilities are available in different form in the public domain but you can judge their value for your own purposes. After a month's use, I'd now rate the Gizmoz productivity tools as essential items for the office, or home office, unless you have already invested in full versions of wordprocessor, database and spreadsheet.

## Helpmates

It is interesting to note how little overlap there is between the many utilities available for the Amiga Those reviewed in this article are second string productivity tools. Gizmoz is highly recommended for those who don't like to leave Workbench. Grabbit too, is easy to use and does its (limited) job in an uncomplicated manner. Meridian's Zing! and Metacomco's Shell, reviewed in former *Your Amigas*, are more fundamental tools. Shell extends AmigaDOS and is my preference. Zing! puts an alternative and very powerful front end onto AmigaDOS as well as providing screen saves and dumps. There is now an improved manual and Zing! keys dovetails nicely with the earlier product.

# ONLY DIGI PAINT CAN DO ALL THIS

Get the maximum graphics power fro your Amiga. Create stunning, lifelike computer artwork with Digi-Paint, the first full-featured 4096 color (Hold and Modify) paint program. Break the "32 color barrier" and finally realize the potential of your Amiga with Digi-Pain advanced features:

- 4096 colors on screen simultaneous
- NewTek's exclusive enhanced HAM mode
- Dithered HAM gradient fill
- Full screen effects including double, half size, mirror reverse and more
- Full IFF and Digi-View compatibility
- Use 320x200 or HAM hi-res 320x400 resolutions
- Fat bits Magnify mode
- Rectangle, oval, line and other draw tools
- 12 different paint modes including blending, tinting and smooth shadin
- Full lasso cut and paste with automa edge blending
- Programmed completely in assembl language for fast, smooth response

Find out why Byte Magazine called Digi-Paint "Remarkable". Available n at your local Amiga dealer or call: **1-800-843-8934.**

# Amiga Games

*Saved up your pennies for a new Amiga game, but have to be selective – then read our comprehensive review pages*

## Test Drive

Have you ever wanted to drive a Porsche 911 Turbo, or a Ferrari Testarossa, or perhaps just have a quick spin in a little black Lotus Esprit Turbo? I have! I have wanted to drive one very fast down a motorway, safe in the knowledge that I could outrun any police car in the vicinity, or at least be warned in advance by a small radar device (now popular in the States).

So imagine what it's like – in your hand is a disk asking you to test drive one of the five most expensive and prestigious cars there are! Quite a challenge eh?

Test Drive is Accolade's latest offering since Hardball, and like Hardball, these guys really know how to design a loading screen; digitized speech, snappy music – hey, if the loading sequence is anything to go by, then the game looks set to be a stunner.

And what a stunner it is! You make a quick selection from the list of five cars (Porsche 911 Turbo, Ferrari Testarossa, Lamborghini Countach, Lotus Turbo Esprit and the Chevvy Corvette), each machine has its vital statistics on display, you select the one you most like (!) and away you go.

The basic idea of the game is to drive fast – very fast. Of course the police try to stop you, after all racing along at 120mph in a 55mph zone is not their idea of sanity. Initially the game is very simple, just don't go too heavy on the revs counter, just take your machine (mine's the Porsche!) up to 800 revs and drop the clutch, as the back tyres squeal, drop her into second, and so on, until you start to feel yourself lose control of the car and then you slow down.

At higher levels of the game, there are other cars driving in both directions, there are more police, a really sneaky hairpin bend, pits in the road and some rough dips and peaks forcing you to slow down a bit – but don't go too slow or you won't deserve to test drive any of these beautiful cars, and the big letters GAME OVER will greet you.

The simulation, for what I know of these marvellous cars, is quite accurate, the Testarossa clearly outperforms the Porsche 911, but the Porsche can be driven harder, the Testarossa has less road handling capability than, say, the Lotus Esprit, but the Esprit, like the Countache, is a little delicate when it comes to pushing the machine into overdrive.

A great game to load up when you don't feel like saving the universe, and a really great game if you happen to like fast cars. If you can, try this game out and see if you like it as people's taste in cars and car racing games are electric at best.

## Terramex

***Touchline:***
***Name:*** *Terramex.* ***Supplier:*** *Quicksilva/APS, Victory House, Leicester Place, London WC2H 7NB.* ***Tel:*** *01-439 0666.* ***Machine:*** *Amiga.* ***Price:*** *£19.95.*
***Originality:*** *10/10.* ***Graphics:*** *9/10.* ***Playability:*** *10/10.* ***Value:*** *10/10.*

THIS IS POSSIBLY THE MOST INFURIATING GAME I HAVE EVER COME ACROSS IN MY LIFE. I have asked the Editor to leave this statement in capitals because I have played this game solidly all weekend with very little sleep, hardly any food. I have a pain in my neck and my eyes are slightly bloodshot – and I've enjoyed every minute of it.

Terramex is an amazing game, starting off as a pretty uninspiring graphic adventure, this game quickly moves on to become one of the best games I have played on the Amiga.

You play one of five national characters, who has been entrusted with the job of finding recluse/mad scientist Albert Eyestrain (and with glasses like his – you can see why) who predicted that the world will end by being smashed to smithereens by a huge meteriote.

The world laughed at Albert. He went off in a huff proclaiming that the world wasn't fit to be saved.

When the meteor was seen just 24 hours away from hitting the Earth, we realised what a silly bunch of people we had been, and therefore entrust one of our top agents, Herr Krusche, Wilbur Fortiscue Smythe, Wu Pong, Big John Caine or Henry Beaucoup – to find the Prof.

The adventure is whacky to say the least; there are lots of things to pick up (carried by your jungle bearers) and puzzles to solve. There are creatures in this landscape created by the Prof, such as rock snakes, Peterodactuls, and drops of acid rain – one touch from any of these and you lose a life.

The adventure is massive, with something new on just about every screen. The rope bridge, for instance had me thinking for ages until I came up with a suitably lateral way of crossing it.

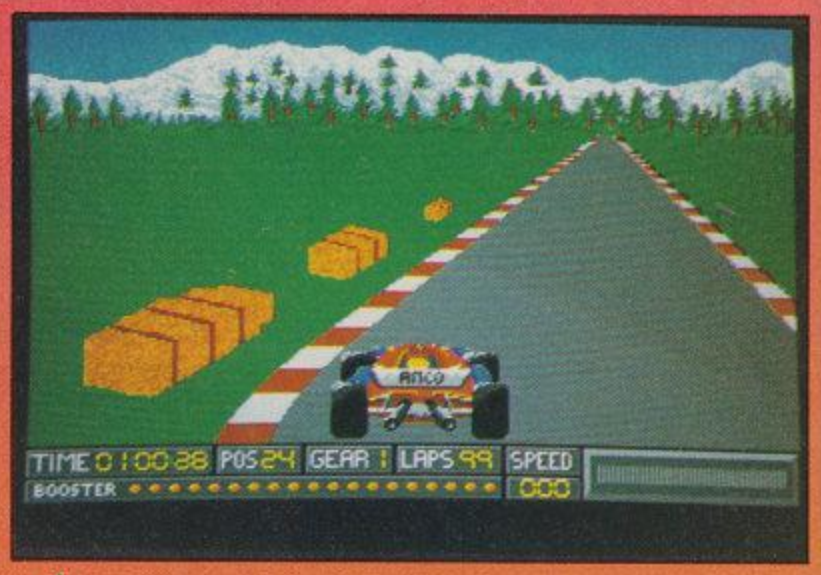

When you do meet the Prof, the game doesn't end there, you will have to convince him the world needs saving and surrender many of the things you have found on the way. He is a bit of a cranky old fellow, saying things like "Make zis available?" between his calculations.

Terramex is likely to be a long lasting game because parts of the adventure are different when you play different characters. It will keep you interested, not only because of the detailed and colourful graphics, or because of the great music (somehow never becoming repetitive – now that's a first!) but because the character interacts with you more readily than in any other game: Try and jump off the edge of a cliff without the right item and he will shake his head, try again, and he will shrug his shoulders and jump.

This is a great game, infuriating and thought provoking with the right balance of whackiness and realism – I haven't seen a game like this on the Amiga yet, go out and buy it, Terramex is addictive and fun.

**C.G.**

## Grid Start

***Touchline:***
***Name:*** *Grid Start.* ***Supplier:*** *Anco Software Ltd, 35 West Hill, Dartford, Kent DA1 2EL.* ***Tel:*** *0322 92513.* ***Machine:*** *Amiga.* ***Price:*** *£9.95.*
***Originality:*** *5/10.* ***Playability:*** *8/10.* ***Graphics:*** *6/10.* ***Value:*** *7/10.*

A bit of a different racing game this one; Anco have decided to stick to the more chunky approach – big sprites, brash colours, scrolling backgrounds and loud, but simple sound effects. You drive a six gear formula one racing car around six different racing tracks; Brands Hatch, Silverstone, Belgium, Mexico, Austria and Germany, each having their own distinctive backgrounds and track characteristics.

Grid Start is a pig of a game to get playing seriously though, you won't reach amateur status (let alone professional) for a few weeks of almost constant play. The secret of Grid Start, like real motor racing, is a question of learning the track off by heart, of knowing your racing car inside out, of knowing where and when to apply the break, change gear, even position yourself on the road for turning.

The game seems to be heavily modelled on Atari's Pole Position, or the later GX-1 (without the night time sequence). Dotted around the tracks are the ubiquitous advertising signs (a drink called "Enjoy" Anco's logo and Rush – the rock group) and the bales of straw, which, upon contact, make your car blow up.

Racing against other cars is very difficult, at first – it seems as if there are too many cars on the track, and if you're unlucky enough to crash into a car (or whatever), the chances of regaining your first place are very slim indeed. Most of the cars speed past you, and you are destined to 24th position – but that's life in the fast lane I suppose.

For all its chunkiness and basic (sometimes sparse) backgrounds, this is an excellent game. Anco have sensibly priced it – clearly making it one of the best value-for-money budget releases I have yet seen on the Amiga. **C.G.**

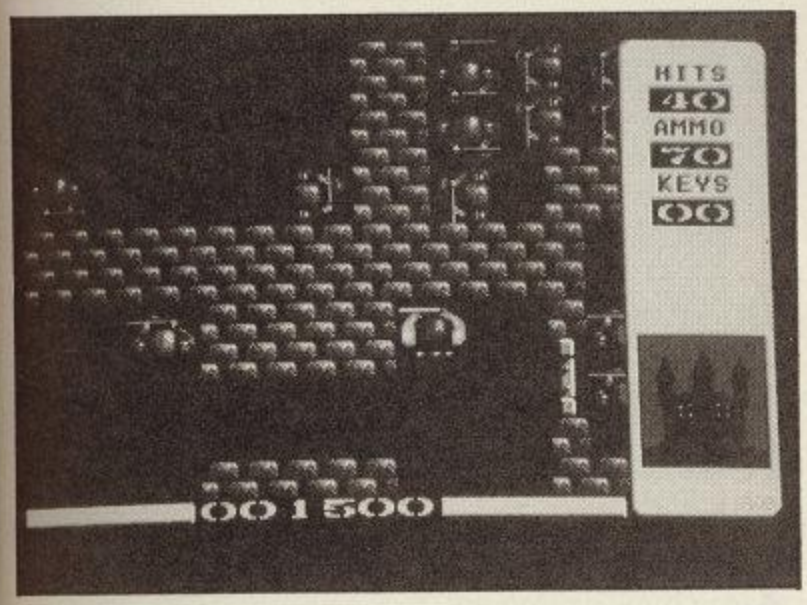

## Eagles Nest

The Eagles Nest is a strategically positioned garrison fortress, believed to be a central command for an imminent enemy counter-offensive, which apparently poses a major threat to the continuation of "our" advance, and must therefore be eliminated before the final offensive can begin.

So the blurb goes on. This is basically a thinly veiled excuse to kill, kill and kill some more.

You play a character who can withstand 50 shots, and you can only carry 99 bullets on you, but the Eagles Nest has plenty of ammo dotted around the four floors with which to fill your automatic rifle and happily kill a few more Commies, Gooks – or whatever.

Not having seen the C64 or the CPC versions of this game released earlier, I must admit I wasn't overly impressed by the programming or the graphics on this one. It is a sort of World War II version of "Gauntlet", the basic premise being to explore as many rooms as possible, shoot anyone who gets in the way and eat food or take medicine as and when necessary.

The sound effects, although realistic, seem somewhat muted, even turning the Amiga's monitor volume control up full doesn't help matters – a shame as there could be plenty of scope for improvements (footsteps, ricochets, other bullets firing at you and the odd cry as an enemy bites the dust).

To make things easier, there is a supplied map of the ground floor; this is very useful should you want to start learning how to play the game.

You have to be pretty quick to play this game properly. If you don't watch your ammo, you could end up being cornered by a load of soldiers without any bullets with which to mow them down, or to shoot open a wooden door.

Eagles Nest is most certainly a playable game, a little crass at times, and the puzzles aren't really as demanding as with other games, but until Gauntlet is released for the Amiga, it will do. **C.G.**

***Touchline:***

***Originality:*** *6/10.* ***Playability:*** *6/10.* ***Graphics:*** *6/10.* ***Value:*** *6/10.*

## The Hunt for Red October

The Red October is a new submarine design so quiet, with a revolutionary new drive system that makes it almost undetectable to the submarine's age old enemy – sonar.

You play one of the most senior Russian Submarine commanders, ordered to test the latest in Soviet death-mongering hardware. But (surprise, surprise), you decide to defect. Your officers are willing to risk their lives to join you while the enlisted crew members suspect nothing.

After killing the KGB-assigned political officer on board your ship (the one man who could blow your cover), you set off, under completely false orders to reach the West. Starting at Reykjanes Ridge, you have to slip out undetected by moving very slowly among the rock formations...

Thus starts the latest in simulations and "strategic" games programmed by Oxford Digital Enterprises, and with the Amiga, they really have had a ball game, using full colour graphics, (a lot of which is digitised), some sparse, but effective sound effects, and mouse control throughout.

Red October isn't a particularly action packed game. Being a more sedate version of "cat and mouse", you have to avoid detection by all sides until you reach a safe port of call (it's either that, or you crash off some country's coastline).

If you are detected by the Americans, they will help you throughout. Russia will, of course, want to blow you out of the water for defecting with their submarine! The English are there also, but their actions are not at clearly defined as the US or USSR ships, although they tend to be a lot faster at manoeuvering.

The game is controlled completely by the mouse, pointing to each respective icon for each member of the crew. The main control panel basically informs you of the ship's direction, the depth and speed of the ship. You can use the compass to change course.

The sonar officer represents the "eyes and ears" of the submarine, while underwater. This has its disadvantages, such as requiring a visual sighting before taking any action (sonar traces are highly subjective) and using sonar can also leave vulnerable blind spots which can be exploited by hostile attack submarines.

There are plenty of other options – all of which have something to do with the running of Red October, your job is to plan ahead as far as you can, take defensive action (at first) but strategically plan offensive tactics should you find yourself in a tight spot.

Red October is a good game for thinkers. There is plenty of visual information, and the supplied maps and notes are essential reading. Another nice touch is the newspaper

headline at each end of the game, you will get one should you successfully dock Red October in the West, but not all countries are willing to accept a state of the art submarine (with a nuclear capability) and they will do their best to fend you off.

Lots of features, lots of options and lots of colourful graphics, all you need is lots of time. **C.G.**

***Touchline:***
***Name:*** *The Hunt for Red October.* ***Supplier:*** *Argus Press Software, Victory House, Leicester Place, London, WC2A 7NB,* ***Tel:*** *01-439 0666.* ***Machine:*** *Amiga.* ***Price:*** *£14.95.*
***Originality:*** *9/10.* ***Graphics:*** *8/10.* ***Playability:*** *7/10.* ***Value:*** *7/10.*

## Western Games

Now, this is a novelty! If you want to learn how the wild west was really won, then this game is for you. No shooting Injuns here, just good wholesome family entertainment such as spitting, shooting beer glasses (using the village idiots as target bearers), eating as much food as you can (but you have to keep it all down) and arm wrestling.

The games on this double disk package are bright, vibrant and very, very silly. Instead of going for realism the programmers of this little gem have decided to make it look like a cartoon or a comic strip and their attention to detail has made what is one of the most graphically inviting games around for any machine on the market.

This is, I think the first wholly German program I have seen for the Amiga, released by a software house called Magic Bytes it is an original game, a bit like the "Olympics" games currently available for the Amiga, but on a more down to earth level.

You will need a joystick to play this one, and it will get some pretty heavy bashing, as it is one of those games that requires fast pushing and pulling on the stick in order to control your character on the screen.

The first game you play is the baccy spitting competition (like I said, good clean wholesome stuff). You chew as much baccy as you can without swallowing, you select the force at which you want to chew, select the angle of the spit and simply gob away!

Likewise, the beer shooting competition is similar, you first draw your gun, and roughly aim the cross over your target (ranging from glasses, bottles, kegs and so on...) you select the right moment to fire and then shoot.

All of the competitions are very difficult to play to begin with, but after a while, you pick up on the rhythm of the game, and after that, it is plain sailing!

A very nice series of games to look at – and great fun to play, especially with a second player as your opponent. Definitely one to bring out at a party! **C.G.**

***Touchline:***
***Name:*** *Western Games.* ***Supplier:*** *Ariolasoft, 9 Disraeli Road, Putney, London SW15 2DR.* ***Tel:*** *01-785 4285.* ***Machine:*** *Amiga.* ***Price:*** *£19.95.*

## Q Ball

English Software have recently converted and upgraded the Atari ST version of this game for the Amiga. It is a sort of 3D Zero gravity game of snooker with mouse control and full colour graphics.

The problem is that while Q Ball is very easy to learn, the game is nigh-on-impossible to play and control properly.

I have tried this game out with many different friends (most of whom already have STs of Amigas) and none of them could control the ball properly – even after a month's full playing. So in the end we satisfied ourselves with randomly aiming the ball and hitting the cue as hard as we can (more logical attempts proving fruitless).

The graphics looks nice, the sound effects are very nice and the music is good (when it lasts) but other than that, Q Ball is best left to lesser machines such as the Atari ST – it is not worth playing because there isn't a game here. **C.G.**

***Touchline:***

# AMIGA OWNERS:

## *Discover new worlds within your Amiga*

## THE 64 EMULATOR FOR YOUR AMIGA **£69.95**

The 64 Emulator broadens the horizons of your Amiga with access to thousands of programs written for the Commodore 64. Yes, the proven word processors, databases, spreadsheets and exciting games can now be run on your Amiga. Why wait for an expanded range of Amiga software when you can take immediate advantage of quality software already chosen by six million other computer owners?

- Run 64 software on your Amiga!
- Supports Amiga disk drives and printers during 64 emulation.
- Serial interface allows use of Commodore 64 disk drives and printers.
- Pop-up configuration menu lets you easily customize The 64 Emulator to your hardware.
- Written in 100% 68000 machine language for fast operation.
- Supports emulation of all video, sound and timers (VIC, SID and CIAs).
- Monochrome mode for increased speed when colour is not required.
- Built-in transfer feature allows you to move 64 programs to Amiga disks.
- Còmpatible with GEOS, PaperClip, Print Shop and thousands of other 64 programs.
- Due to the nature of the Amiga, some programs may not operate with the 64 Emulator.

*Requires 512K and Kickstart 1.2.*

# The new whisper quiet slimline

# Cumana disk drives for the Amiga user

Silence, high reliability and fast access are just some of the advantages that purchasers of the new high quality external 3.5" floppy disk drive from Cumana can enjoy when using their Amiga computers.

The Cumana CAX 354 takes its power from the host computer and offers a full 880k of formatted storage to either A500 owners or users of the A1000 series.

Other points to ponder are, high quality NEC 3.5" double sided drive mechanism, 1 Mb unformatted storage capacity, and standard connectors which enable easy addition of 5.25" drives.

For those who want to know the real nitty gritty, the seek time (track to track) is a super fast 3ms with a settling time of 15ms, to really zip through your software – and all at an astonishingly low price. Ask your Cumana dealer for details or contact:

CUMANA®
*The best name in memory*

Cumana Ltd,
Pines Trading Estate, Broad Street, Guildford, Surrey GU3 3BH.

# DATEL ELECTRONICS

## EXTERNAL 3.5" DISK DRIVE

- Slimline 1 Meg suitable for A500 or 1000
- Top quality NEC drive mechanism
- Throughport for Daisychaining other drives
- Attractively styled ● Complete – No more to buy
- 12 months guarantee ● Fully compatible

**ONLY £114.99 POST FREE**
**ADD (£5 for next day Courier delivery).**

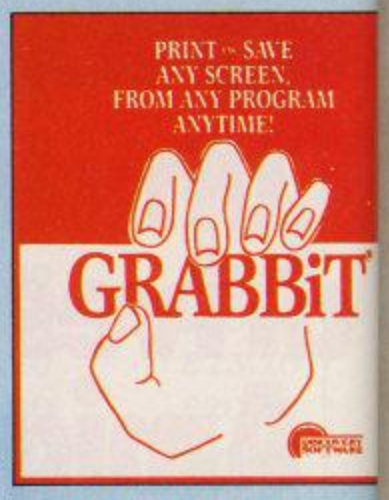

## 512K RAM EXTENSION ● A500

- Available with/without calendar clock option
- Simply plugs internally into a A500 slot
- Fitted in minutes – no soldering etc.
- With calendar/clock onboard time/date automatically booted
- Battery backed to retain time/date

**ONLY £79.99 FOR STANDARD 512K CARD OR**

**ONLY £89.99 FOR VERSION WITH CLOCK/CALENDAR**

## MIDIMASTER

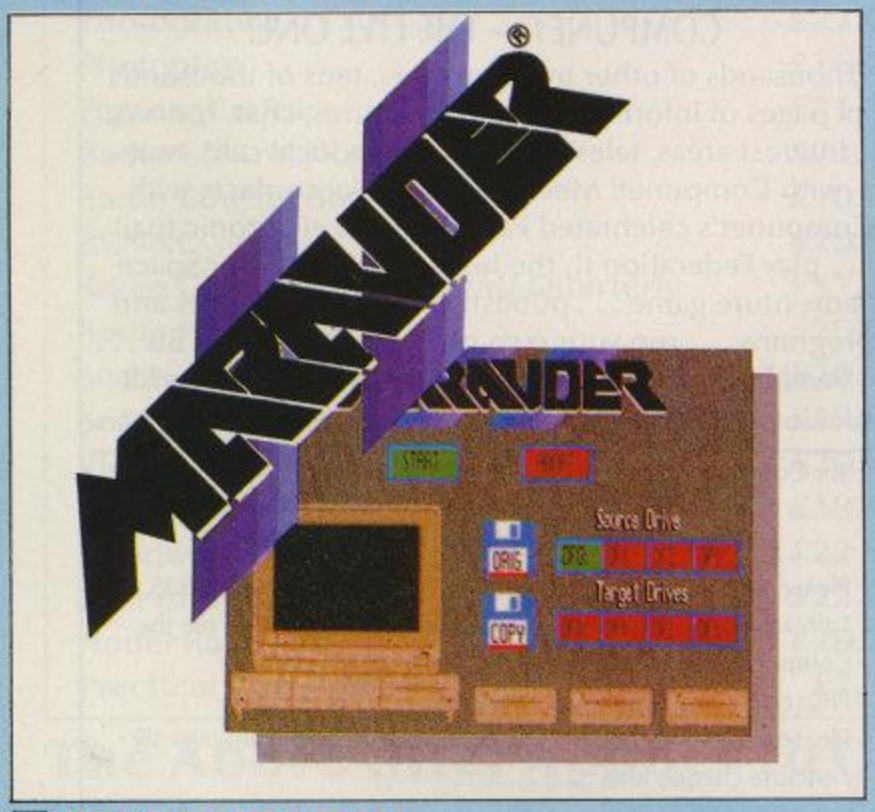

- Full Midi Interface for A500/ 2000/1000 (Please state model)
- Compatible with most leading Midi packages (inc. D/Music)
- Midi In – Midi Out x 3 – Midi Thru
- Fully Opto Isolated
- No need to pay more – Full Midi standard

**ONLY £34.99**

## GRABBIT

- Grabbit is a transparent Screen Grabb program
- Always there – simple key operation
- Drives dozens of Printers
- Requires only 10K Ram
- A true productivity tool!
- Very quick operation – does not requi screen on during printing
- Free "ANYTIME" program lets you upd your own colour palette preferences.

**ONLY £21.99 POST FRE**

## MARAUDER II

**● Quite simply the best disk copier available for the Amiga (all models)**

- Superfast disk copier will copy almost any commercial disk
- Friendly user Interface – Mouse driven throughout.
- Completely compatible with Amiga multitasking system
- Even decrypts many encoded programs including D.Print/Video/ Paint/Music/II etc.
- Special 'Strategy Files' cope with even the most advanced protection schemes
- Supports upto 5 drives simultaneously for multiple copies
- Regular updates available – we always ship the latest
- Fast operation – typically around 80 seconds
- USA's top selling copier

**ONLY £29.99 POST FREE**

**ALL ORDERS NORMALLY DESPATCHED WITHIN 48 HR**

# Superbase Professional

*Superbase fulfills its promise with the addition of a forms designer and programming language*

***By Anne Owen***

Superbase is instantly recognisable by the VCR style controls (an idea now 'borrowed' by other database programmers) has been evolving over at Precision in Surrey, into Superbase Professional.

The new software tidies up some of the old and features new elements such as a text and forms editor. The most important addition however is that of a programming language for Superbase. The designers have not come up with some esoteric database language for us to learn but have sensibly made the familiar structures and keywords of Basic available for Superbase programming.

It's worth reminding ourselves of some of the unique features of Superbase, all of which are now programmable. A database file can have an external file linked to it which can contain text, screen pictures or music data. The pictures can form a slideshow or can be dumped to a printer; the music can be played back at a tempo programmed from Superbase. The equivalent program keywords are SHOW and SCRDUMP.

Superbase supports the Amiga's speech facilities and the program language provides the keywords SAY USING followed by the parameters for pitch, inflexion etc.

Superbase files can cross reference with other files. For instance a holiday record file might have fields common to a firm's personnel file with holiday entitlements in it. In this way updating on the personnel file also effects the variables in the holiday file itself. Some relevant program keywords are CREATE and INDEX.

Superbase strives to allow English language style expressions where possible, e.g. the relative concepts of time TODAY and NOW and LIKE string matching function, all available via the programming language.

## Superbase Basic

When the program option is selected, an edit window opens, just like Amiga Microsoft Basic. A program menu is available with Run, New, Edit, Open,

Close, Save, Print and Remove options. You can move into the database window at any time, or open a command line window for directly typing in program commands.

The program editor has many of the features of the text editor including delete word, delete to and of line, clear line, split line, join line, insert mode on/off and undo, making program writing a pleasant task.

Familiar (to Basic users) keywords are ABS, ASC, ATN, CHR$, COS, DATA, DIM, INT, LEN, SQR, CLS, INSTR$, LEFT$, LIST, LOG, MID$, MOD, NEW, READ, REM, RESTORE, RIGHT$, RND, RUN (from memory or disk), SGN, SIN, SQR, STR$, TAN and VAL.

As with many keywords, LOAD and SAVE can be used with parameters to give them wider use DOS command from disk for execution before returning control to the program. DISKSPACE is also useful when files are filling up fast. EOF detects the end of a Superbase file.

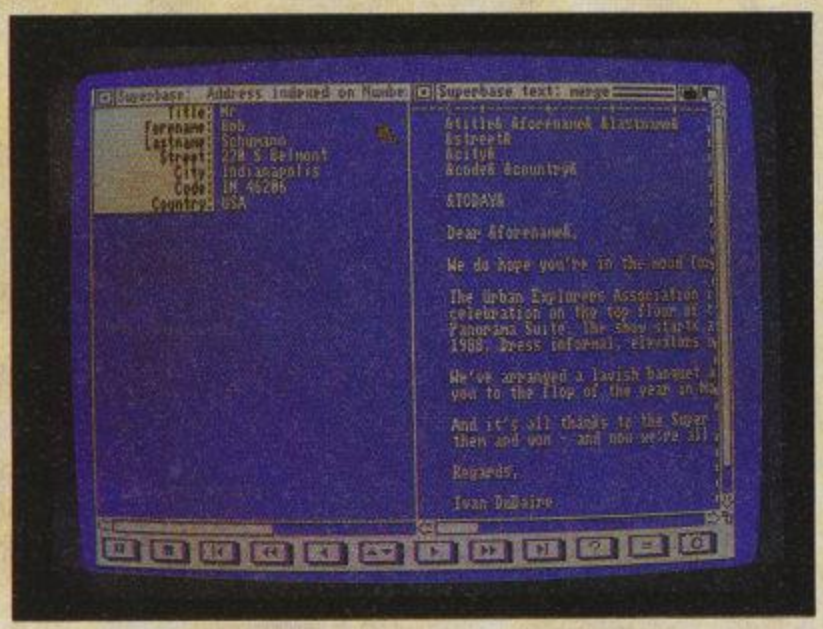

Superbase deals comprehensively with time, indeed there seems to be a strange preponderence of time based keywords: DATE$, DAY, DAYS, HRS, MINS, DATEBASE, TIME$, THOUSECS, TIMEVAL, TODAY, NOW, YEAR, MONTH, MONTH$, SECS. All are available to define the date and time format and to express or assign the required moment, down to milliseconds!

String handling is a vital part of database work, carried out in Superbase by the following keyword commands: FCASE$, LCASE$, LTRIM$, UCASE$, TRIM$, and and secondly in the position of a programmer/consultant creating an easy to use system which inexperienced operators could use efficiently.

## Forms

For the former the forms editor is the first port of call. Forms have the advantage that they present information on screen or on paper in a manner designed by the Superbase user. Specified information from a combination of files can be displayed clearly and attractively.

Forms are designed page by page, a printer page, not a screen full, and each form consists of three pages. Pages can be saved and reloaded, and their positions within the forms swapped about in memory.

than normal in Basic. They can deal with a tokenised program, with text, with a query file, an update file or function key definitions and can add one file to another.

CHAIN loads a new program but retains variable information. CLEAR and ERASE clear variables while SET interprets variable settings and commands from a disk file. ERRNO, ERR$, ON ERROR and RESUME help with error tracing and FREE gives a memory free figure.

The main control structures are FOR TO NEXT, IF THEN ELSE and WHILE WEND. There are no line numbers but you can GOTO or GOSUB to a label and (of course) RETURN to the main flow of the program. ON GOTO and ON GOSUB are also available.

DOS like commands COPY, DELETE, DIRECTORY, RENAME and SETBUFFERS are available from within a program. CALL calls up any SPCAE$. Number precision can be set with FIX.

The cursor position is read by COL and ROW and is assigned by LOCATE and HOME. NEWLINE moves to the next line, REPLICATE reproduces a character a specified number of times and SET PAGING controls the page scrolling while WAIT does just that. Bold, underline, and italic text can be easily turned on and off.

PRINT selects the printer as the output device. PCOL and PROW detect the printhead position and EJECT can be used to ensure sensible page breaks for printed output.

## Tale of Two Users

I put myself initially in the position of a user setting up forms for presentation on screen and paper, including mail merging and reports

The sort of thing you might do is to print a two page form to an ordinary dot matrix printer a page at a time and then match them up for an A3 photocopy. If you can sheet feed your printer then an A4 form design can be printed once, photocopied many times and the resulting forms put through the printer to have individual details filled in.

Calculated fields, which change dynamically, can be added to the form. They are attached only to the form, not to the file. The report functions SUM, SD, MEAN, MAX, MIN and VAR are available.

Any of the files supplying information to the forms can be made the master file and new selection criteria applied to the records.

The form can appear in 4, 8 or 16 colours and the design itself is carried out with the aid of the following 'objects': areas (solid and patterned fills), boxes, lines, images (loaded from

other paint programs), text and fields (supplied by the data files). The 'object' is placed on the form in the desired position and can be moved, copied, edited or deleted. An invisible grid can be turned on to help alignment of objects and a 'reduced' preview of the complete form can be displayed. Field objects can have justification adjusted, can be set as 'read only' and can be automatically given a border and/or the field name before the data.

Printing of the form can be in text or graphics modes. Each object can have a value assigned to it which indicates whether it is to appear on a printout or not. Some design features (especially colours) may look excellent on screen but confusing on paper.

## Function Keys and Automatic Reports

For performing repetitive but limited actions on the data the user needn't go as far as writing a program. Function keys can be used very effectively. Commands can be assigned to the function keys and activated with a single key press. For instance loading a letter into the text editor and extracting a couple of names and address fields for merging and printing. KEY displays all the current definitions, which can be loaded and saved as required. Programming function keys with often used strings also helps with data entry. The text editor has a complete set of menus of its own and is capable of 64K documents. A format ruler can be placed at any point in the text. There is help on key presses and the mailmerge simply involves inserting field names in the text between the & character (Wordstar style).

Another boon to this user is the automatic generation of reports without the need for programming. The reports are designed on screen with the forms editor. On saving, the editor automatically creates a report file and an associated Superbase program file which will reproduce the report on screen or printer, including title page and totals page if required.

## Programming

Because the command language matches closely the menu options in Superbase, any regular user can turn his hand to programming and quickly get a feel for the actions which will result from a program. The professional programmer can go a step further to automate data processing or design an interface suitable for a particular Superbase application.

It is possible to create files from scratch within a program via CREATE, ADD, MAKE and INDEX. There are also the corresponding QUIT, REMOVE FILE and REMOVE INDEX. Files can be saved with PROTECT and, for further security, a password added with PASSWORD.

Record creation involves the use of BLANK, ENTER and STORE keywords. Field values can come from the user with EDIT (whole record) or ASK (specific input) or values assigned directly from DATA in the program or INPUT from disk files. POINTER can be used to control the pointer in an ASCII file when extracting data.

REQUEST is a vital command which brings up one of the variety of existing Superbase dialogue boxes. You can manipulate menus with MENU ON and CLEAR (menu). Presentation as record, table or form can be set and records selected with SELECT – CURRENT, DUPLICATE, FIRST, KEY (with string parameter), LAST, NEXT, PREVIOUS and REMOVE. A path can be set to a validation file (which checks data entry) and suitable error message issued. Data entry can also be forced if necessary.

WHERE sets a filter on the fields selected (by SELECT) for report output or for other query applications, such as sorting, merging files or simply retrieving data. Sorting is carried out by SELECTing the fields upon which to sort and ORDERing them, either ASCENDING or DESCENDING.

Forms, reports and mail merging can all be handled from within a program. Both function key definitions and programs can be loaded automatically by creating a program file called START, which Superbase will load and execute on startup, allowing a 'turnkey' system to be easily implemented.

## Conclusions

A journalist colleague recently remarked that the potential of the Amiga hadn't been realised. True, but Superbase is one of a new generation of software now realising it. The creative (graphics, page design, fonts, speech and music) is combined with the practical power of a relational database. The one limitation you are probably already aware of is your printer. The appearance of fonts on screen is often much better than on a graphics dump. The Amiga does not have special font libraries to accurately reproduce these, even on a laser printer.

The designers of Superbase haven't made any assumptions about what the business user will want from the database. After all, these days the business computer is more than likely used in the engineering of science departments as much as in administration. A scientist will appreciate the precision of numbers and the accurate dates, even including changes to the calendar in 1752.

Superbase, like all good software, creates its own working environment. The new features of Superbase professional allow the powerful features to be extended or for the environment to be restricted for a particular category of use or user.

The fast Amiga interface shines through but I must mention, as I have with all the disk based software, that the performance of the Amiga floppy disk drives inevitably slows down the movement between some operations. Users who have Superbase up and running daily would benefit, indeed profit, from a hard disk (they start from £694 from Precision).

When Superbase was demonstrated to me on a 512K A1000, the program very quickly ran into memory problems. These were instantly cured by the fitting of a Promiga megaboard 2 from Progressive Peripherals. I suggest, if you are working with 512K, that you discuss this with Precision before purchase.

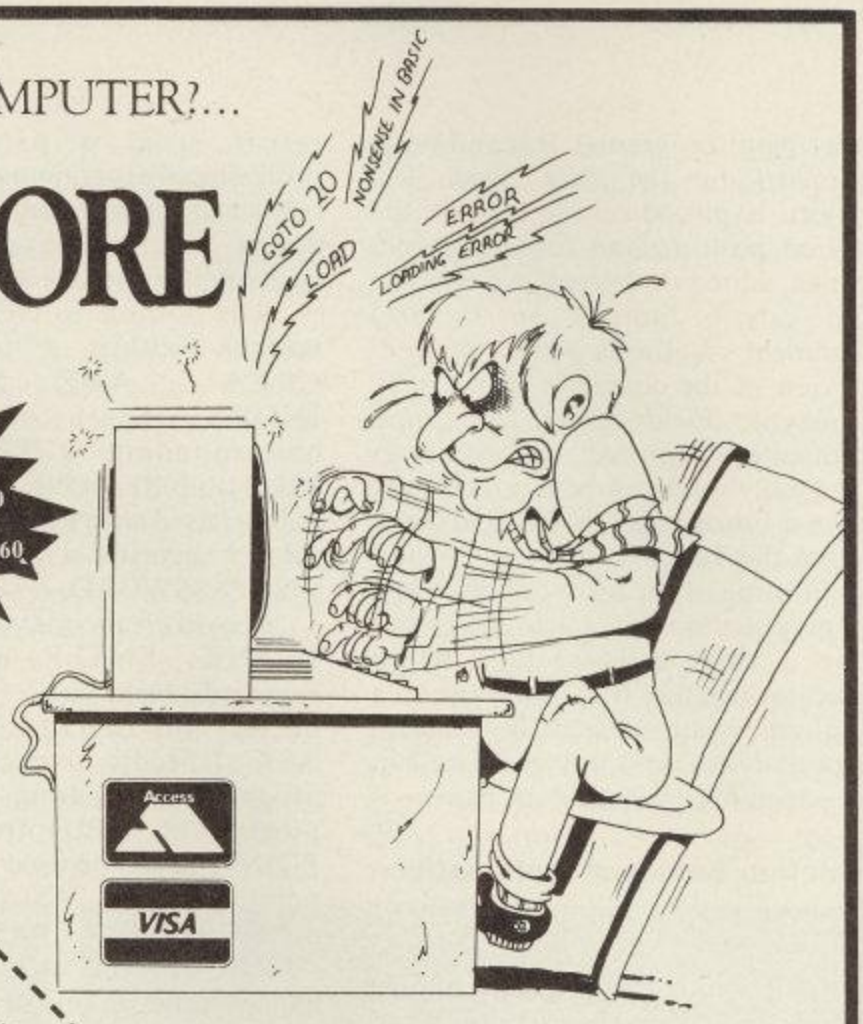

The documentation is of a high standard, one manual for Superbase, another for the new Superbase professional features. Although these are general purpose manuals, Amiga users can easily avoid the material about Superbase on Atari and MSDOS, though it is obvious that many Amiga features such as speech and external music files are missing from the inferior versions!

Upgrade prices will be available and registered users wil be mailed by Precision.

*So you own a Commodore? So you've written some programs? So why haven't you sent them to us?*

*Your Commodore* is always on the look out for new programs, hints and tips, articles and even regular series. In fact if you have something that you think could be of use to other Commodore owners we want to hear about it.

So if you have got something which you think we may be interested in. How do you go about submitting it to us?

Below you will find a list of guidelines that will help us to deal with any item that you send in to us. We don't expect everybody to be the next William Shakespeare but if you do follow these simple rules then it will make our job a lot easier.

1) If possible all material sent to the magazine should be typed or printed out on a computer printer.

2) All text should be double spaced i.e. there should be a blank line between each line of text. You should also leave a margin of about 10 characters around the text.

3) On the very first page you should put the following:
Name of the article
Machine that it is for
Any extras required – disk, printer etc.
Your name
Your address
Your telephone number

4) The top of every page should have the following information on it:
Abbreviation of the article title
Your name
The page number

For example, suppose you had submitted an article on C64 interrupts. You should put something like the following at the head of the page:

Interrupts/J.Smith/1

5) Please make sure that you do not make any additional marks on your text especially underlining.

6) Try and write in clear concise English, it does not have to be a work of literature but it must be comprehensible.

7) On the bottom of each page you should put the word MORE if there are more pages to the article or ENDS if it is the last page.

8) If possible, enclose a listing of all programs.

9) Under no circumstances use a staple to hold the pages together. Use a paperclip instead.

10) Programs should be included on either disk or tape. Make sure that you SAVE two copies of every program so that we have a better chance of loading them if problems occur.

11) Programs under 10 lines can be included in the text. If your program is longer than this you must enclose a disk or cassette.

12) If your article needs any artwork then supply clear examples of what is needed. We don't expect you to be an artist but we do need to see what is required.

13) Photographs, if necessary, must be either black and white prints or colour slides. We can take shots ourselves so don't worry about this too much.

14) Submissions of any length are welcome. If you have a five line routine that you think may be of use to someone else we welcome it just as much as a full blown six part series.

15) Payment varies quite a lot and depends on quite a number of factors, such as complexity of program, presentation of program, number of magazine pages it takes up etc. Payment is generally between £10.00 and £800.00.

16) All payments are made in the month that the magazine containing your article has appeared in print.

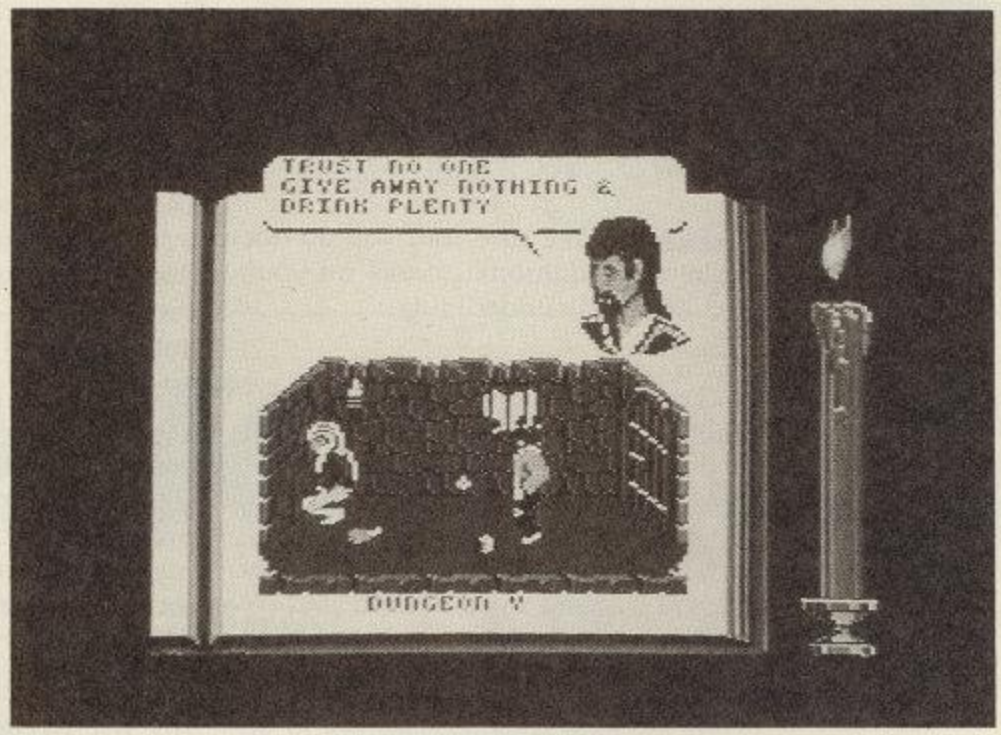

17) If we do find your submission suitable for inclusion in the magazine we will write to you giving the terms of publication, the rate of payment and an agreement form. Prompt return of this form will allow us to use your program as soon as possible.

18) If you want the program returning to you, should we find it unsuitable for publication, then you should enclose a stamped self addressed envelope.

19) The last and most important point to make is 'get writing', we are waiting for your articles.

# I.Q.

*Strain your brain with the recent intellectual releases*

**Knightmare**

Welcome watchers of illusion, to the castle of confusion... If you recognise these opening words then you're already one of the dedicated followers of ITV's cult roleplaying TV game Knightmare, in which teams of advisors guide a knight, blinded by a full facial helmet, around a computer generated graphic dungeon. The graphics in the TV program were created by two Supernova computers which are slightly more powerful than your average C64 so this is obviously going to be a cut down version from Activision.

You play the knight who must find his way out of the Knightmare by solving his problems and overcoming the monsters and go to the second wilderness section. To help you in your quest you can seek advice from two Oracles. However, one is good and the other is evil so you should listen to both sets of advice but follow none to find the successful middle path. You will also hear from Treguard, the Dungeonmaster whenever you waste time or attempt pointless actions or anything else that annoys him.

Your quest is told in 3D graphics which is displayed on the turning pages of a book alongside a burning candle which represents your lifeforce. As monsters hit you, and poison and traps take their toll, the level of the candle will plummet to end your game.

You control the Knight's movements with a joystick and his actions with adventure style commands selected from menus or by pressing the first letter of the command, object, person or sell. This may seem an efficient method – however it can cause you problems as it takes a long time to throw a rock while a ghost and a demon chomp at your heels.

Unfortunately, the game also suffers from a few annoying bugs such as if you throw a rock in one room and then enter the other, the same rock comes flying across to meet you! To add to this the graphics are crude and the

action is far from the combination of traditional adventuring and arcade action promised on the packaging.

There is no way a C64 can mimic the efforts of two Supernovas and live actors but surely it can come closer than this. Perhaps the approach used in Dragon's Lair and Escape from Singe's Castle would have been better. Disappointing I'm afraid. **T.H.**

## Scruples

This is a computer version of the best-selling board game which is best described as a sort of thinking man's Trivial Pursuit.

The game poses a series of moral dilemmas to each player in turn. It is up to you whether you decide to answer truthfully or bluff your way out of things but you are always likely to be challenged in which case you will have to justify your answer. The other players will then vote as to whether they believe you or the challenger.

A typical question would be, "If you saw your boss coming out of a cinema that showed exclusively blue movies, would you tell your colleagues at work?" Personally, I would only bother if I recognised him appearing in one of the blue movies!

Between three and ten players, either human or computer, can take part in a game. Setting up the game is somewhat tedious as you must select from sixty-four different faces for each computer player and define personality traits for the humans. This involves defining on a bar chart how you see yourself for each of twelve different characteristics. These range from personal integrity via greed to family relationships. The computer then adjusts your inputs slightly and presents you with a new graph at the end of the game according to how you answered the questions.

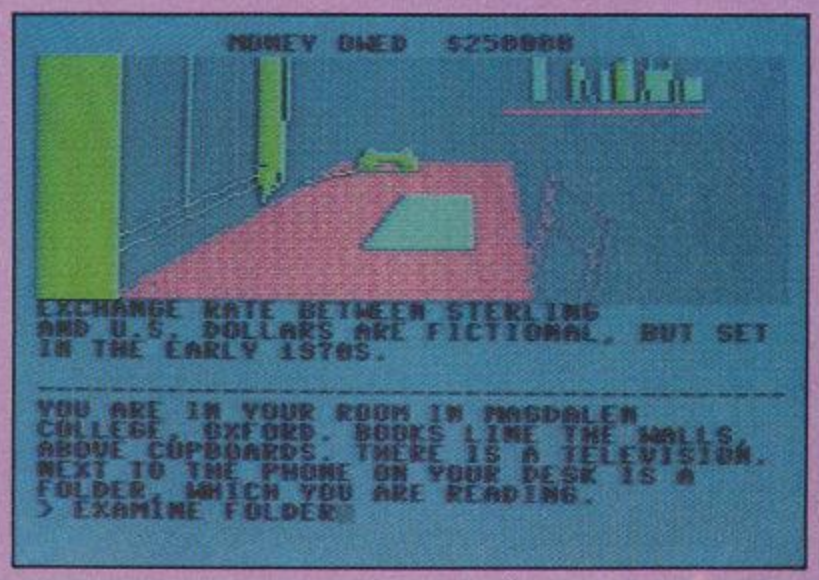

The game itself depends on getting rid of your dilemma cards before anyone else does. You have an answer card (yes, no or depends) which is kept secret from the other players and the trick is to ask questions which will force players to give the same answer as you have on your card.

The problem with the game is that to get the best out of it, you need to be watching the other players and judging their reactions. Against computer opponents, this is obviously impossible. Again, with human opponents, making them look away as you examine your answer card destroys the atmosphere of the game. The conversion of the game is excellent, no complaints there. I just think that this is the wrong sort of game to be converted in the first place. Whereas it works well with a group of you sitting round a table, it fails miserably when you all move to the small screen. **G.R.H.**

## Not a Penny More, Not a Penny Less

It was surely only a matter of time before Jeffrey Archer found his way somewhere into the computer world. After all, his list of appearances in recent years has been considerable – television, books, the stage, political rallies and the High Court. Domark have affected the link up and produced a games based on Archer's first book, Not a Penny More, Not a Penny Less.

The book, like most first novels tends to be semi-autobiographical. Four totally unconnected people are persuaded to sink their life savings into shares in an oil company. There is the promise of enormous profits but the deal turns out to be one large con trick and the punters lose one million dollars between them (early 1970s prices).

You play one of the four, Stephen Bradley, and it is up to you to contact the other three and persuade them that you ought to try and get back all the money that you were swindled out of. Hence the title of the game.

That is the gist of the story and a very good one it is too for whether you like Jeffrey Archer or not, he does tell an excellent tale even if his literary powers do not feature among the world's greatest.

The games itself is a different matter and I am afraid that it takes the art of adventuring back into the dark ages. The list of problems and bugs is phenomenal and I can do no more than mention some of the ones that occur at the start of the game.

The parser is pathetic. Even by the standards of games written five years ago, it is dire. There is no inventory command so that if you pick something up, there is no way you can find out what you are holding at a later stage of the game. Directions have to be typed out in full, e.g. 'go north east' rather than just 'NE'. Not that you can move anywhere anyway. At least not until you have solved certain puzzles. The game is entirely linear in construction so that everything must be done in an exact order. Get it wrong and it is effectively game over although you are not told that at the time.

Although many items are described in the location descriptions, trying to examine them further is by and large a waste of time. In some cases they disappear totally. For example, you start off in your room in college (you are a university lecturer). In the room is a bookcase and a cupboard. Or at least there are until a policeman arrives and catches you with an incriminating dossier open. Then they disappear. If however you manage to close the dossier before the policeman arrives, after he as gone, re-examination reveals a vital phone number that you managed to miss first time around.

Still the bugs haven't finished. Phoning Scotland Yard puts you through to your stockbroker (perhaps this is an intentional dig at BT). Examining the top names in the dossier gives you a description of your rooms again. I managed to go and see this first character, a doctor, on three occasions within one game; each time following exactly the same sequence of events because no flag had been set to instruct the program only to allow things happening once.

There are graphics but they are of the line variety complete with a fill routine that takes ages to complete. The program also boasts an impressive speech routine but there is so much hiss that it sounds like a badly tuned radio station. Pronunciation isn't all that it might be either. Magdalene College is pronounced a mag-da-lin instead of maudlin.

Perceptive readers will notice that I was not too impressed with this game. In fact, I would go so far as to say that this is the worst full priced adventure I have played for several years. The package includes a copy of the book which is necessary to find out what you are supposed to be doing. My advice is to go and buy the book and ignore the game, especially at just under fifteen pounds for a cassette version.

## Eye

Another computer version of a board game and one that is almost impossible to describe if you haven't seen it before.

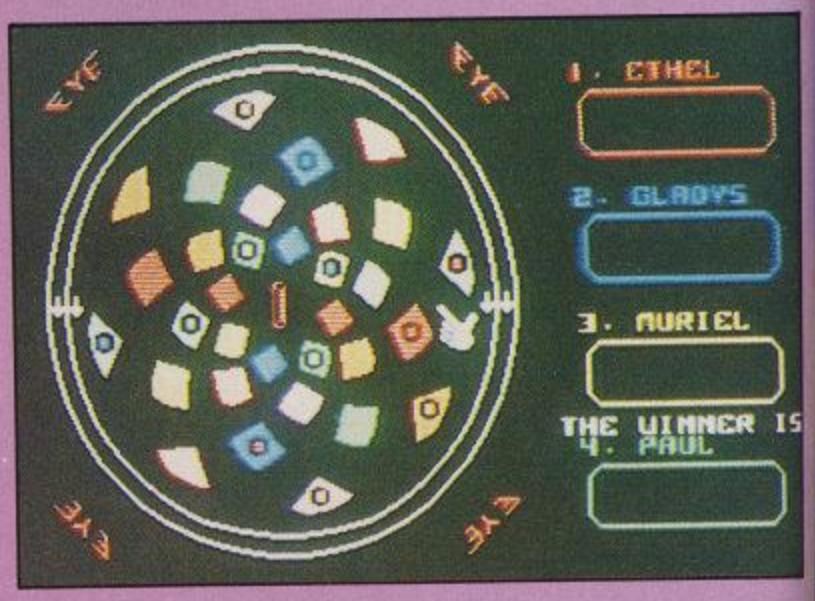

The playing area is a circle with four squares of eight different colours showing at any one time. The position of these squares is altered by rotating two spirals within the circle. The object of the game is to place the requisite number of your own pieces on your own colour before your opponents manage the same feat. How many pieces you need is determined by the number of players.

You have a number of moves determined by the highest number of pieces you have on any one colour. A move can consist of sliding one of your own pieces to an adjacent square or twisting one of the two spirals to change the pattern of the colours either with the object of hindering one of your opponents or helping yourself. If that wasn't complicated enough, you can also control netural colours and at the beginning of each turn, you can move any of your opponent's pieces that happen to be lying on a colour you control.

Although it all sounds very complicated, you soon get the hang of what's going on and the game becomes quite addictive. One advantage of the computer version is that there are several game variations that are not possible in the board game but against that, one of the most enjoyable parts of the board game is moving the spiral and watching the colours change. In the computer version, this effect is lost as the screen blanks out and redraws with the new pattern.

Eye is the sort of board game that converts well to the computer and fans of strategy games like this who are in constant need of someone else to play against will not be disappointed. Two minor quibbles. The printed instructions are somewhat sparse and could usefully have been expanded and also there is a silly grammatical error when you are setting up the game (whose instead of who's). I know it's trivial but it does have the effect of making the finished product look unprofessional.

## DOLPHIN DOS

**THE EFFECT IS STAGGERING.**

Best Hardware Utility of year

The **established standard** parallel operating system for the 64/128 and 1541 disk drive. Now in use with most of the top software houses including **Gremlin, Software Projects, Thalamus, CRL Alligata, Superior etc. etc.** as well as many of the top independant software programmers

The speed and efficiency is **incredible**, who would believe that the humble old 1541 could load **202 blocks in less than 5 secs**. It is compatible with the majority of commercial software and can be switched out when necessary. One of the real pleasures of using this system is to use it with the likes of Easyscript & Superbase to speed up both the **normal loading and the sequential files**. It is important to point out that this is achieved using **standard** CBM disk format and not a special system, therefore you can still use your existing disks.

**ONLY £69.95**

**INSTALLATION**

Fitting involves fitting two sub assembly boards, one in the 64/128 and one in the 1541. Normally these just plug in but some '64s need a small amount of soldering.

**EXTRAS AVAILABLE**

User port expansion card.....**£14.95**
Kernal for '128 in '128 mode.....**£9.95**
Second drive assembly.....**£44.95**
Dolphin Copy (selection of copiers includes very powerful nibbler, extra fast unprotected and selective file).....**£7.95**

**SOME OF THE FEATURES**

- LOAD speed 25x normal (PRG)
- SAVE speed 12x normal (PRG)
- LOAD speed 12x normal (SEQ)
- SAVE speed 8x normal (SEQ)
- LOAD/SAVE 3x normal (REL)
- Easy & fast DOS commands
- Format 40 tracks (749 blocks)
- Monitor built in
- LOADs 202 blocks in 5 secs
- Enhanced screen editor
- Drives centronics printer
- Extra BASIC commands
- Compatible with standard DOS
- Can be switched out

## Disks Boxes

**25 bulk** packed DS/DD disks. With sleeves, w/p tabs and labels. Good quality & fully guaranteed..... **£13.95**

**25 disks + box**. Disks as above plus 50 capacity locking storage box..... **£22.95**

**25 disks + box**. As previous offer but with 100 capacity locking box. A very popular offer..... **£24.95**

**50 capacity box**. High quality lockable disk storage. Smoked perspex top..... **£10.95**

**100 capacity box**. Larger capacity version of above..... **£13.95**

**In Australia contact: Micro Accessories of S.A., Unit 8, Hewittson Rd, Elizabeth West, S. Australia 5113.Tel: (08) 287-0191**

# FOR SPEED, POWER AND EASE OF USE

# FREEZE MACHINE

**Now with.. "Single part save" Includes.. "Freeze Frame MkV & Lazer II"**

- **Freeze...** Totally unstoppable Freeze facility from the originators.
- **Fast Save...** Saves in as little as 15 seconds. Nothing else can match this
- **Multiple Save...** Make as many saves as you want once frozen, in different styles if you wish.
- **Ultra Compact...** The most efficient compacter? Our tests indicate this, as many as 5-6 games per disk.
- **Game Killer...** Incorporates an effective routine to disable collision detection.
- **Independant...** Even produces stand alone Lazer files that reload in as little as 10 seconds.
- **Ease of use...** Always a strong feature, now even more enhanced.
- **Multi-Load...** Standard cartridge handles many games of this type. With the utility disk even more!
- **Fast Format...** Formats your disks in about 12 seconds.
- **File Copier...** Built in fast copier handles files up to 248 blocks long and is really easy to use.
- **Two Fastloads...** A normal disk turbo at 5-7 times normal PLUS the astonishing Lazer at 20+ times normal...BUILT IN.
- **Selectaload...** Just use cursors to scroll to the program you want and press a function key.
- **Reset...** Built in, so you can enter pokes for more lives etc.
- **Tape Turbo...** For quick save/reload on tape.

**CHILLS THE REST!**

"...far outstrips the opposition on both price and performance ..."
Commodore Review

"...the most exciting and lightning fast I have ever used..."
Commodore Computing International

## Why Freeze Machine?

This is the latest and most effective backup cartridge from Evesham Micros, the originators. It's speed of operation is the staggering feature. Imagine being able to SAVE & reLOAD your favourite games in as little as 10 seconds and no more than 18. No other "device" can remotely match these figures...remember these facilities are *built in*. Buy the "Freeze Machine" and see it perform, if you don't agree that it is the most formidable cartridge available return it within your statutory 28 days for full refund, we are that confident.

**ONLY £28.95**

## UPGRADES

| | |
|---|---|
| MkI, II, III, IIIB.... | £19.95 |
| MKIV..... | £ 7.95 |
| Lazer..... | £ 2.00 |

## FREEZE MACHINE Strikes Back

**Freeze Machine Utility Disk V3.0**

Latest version of the disk that complements the use of the Freeze Machine. Includes well over 30 routines. Allows the complete transfer to disk of many programs that load extra parts as the game progresses (the ones the standard cartridge cannot handle). Includes many of the latest popular titles like Last Ninja & Gunship plus many "standards" like World Games & Supercycle. Avery useful add-on to your Freeze Machine.
Upgrades: £2.00

ONLY £7.95

## DOUBLER

The tape backup device

Still selling well, years after it's initial appearance. Surely it must be the most effective product of it's type. Consists of hardware and software and uses a clever method, controlled by the software that allows you to make perfect backups of your tape software. Uses two CBM type data recorders.

- Easy to use
- Good results
- Proven design

**£12.95**

## 1541 Exam

**Is your 1541 suffering from...**

***ALIGNMENT PROBLEMS***

If so then this is the package for you. Contains digital alignment disk and drive fault diagnosis software that allows you to both **check and correct** head alignment and speed.

- Checks alignment
- Checks speed
- Detailed instructions
- Includes quiet stops

**£39.95**

## GEOS

Full range of Berkeley Softworks GEOS products for the 64 & 128 at the best prices.

| | |
|---|---|
| GEOS 64 | £24.95 |
| GEOFILE | £24.95 |
| GEOCALC | £24.95 |
| GEODEX/DESKPACK | £21.95 |
| GEOWRITE WORKSHOP | £24.95 |
| FONTPACK ONE | £16.95 |
| GEOSPELL | £16.95 |
| GEOPUBLISH | £32.95 |
| GEOS 128 | £32.95 |
| GEOWRITE WORKSHOP 128 | £32.95 |

## Disc Disector V5.0

Our popular disk backup/utility package includes a wide range of pwerful and useful programs. The 'nibblers' can produce backups of most protected software. Includes many parameters for the most difficult to copy software.

- Evesham 3 & 8 minute nibblers
- Many parameters
- Dual drive nibbler
- Selective menu maker
- Disk orderly
- Unscratch
- Disk rescue
- Discmon+
- Etc., etc.

**£19.95**

The whole package is easy to use and menu driven. Works with with 128 in 64 mode.

## 1541 QUIET STOPS

Woodpecker trouble? Silence your 1541 now. (not suitable for 'turn lever' type drives)

- Easy to fit
- Detailed instructions
- Does two drives
- Prevents mis-alignment

**£4.95**

## IconTroller

By Suncom, the keyboard mounted cursor controller, a natty little stick that attatches to your keyboard. Perfect for Icon driven software like GEOS.

**Only £11.95**

**All prices VAT/delivery inclusive. Next day delivery £5.00 extra.**

# Welcome Back

*It's good value for money all the way with our handy compilation of re-released budget games.*

***By Tony Hetherington***

When you go into a shop to buy a game you're usually greeted with a bewildering array of titles; some of which are treasures, others are terrors. For full-priced games the answer is simply to read through *Your Commodore's* review pages and then go out and buy with confidence. Even budget games have the same pitfalls as £1.99 for a bad game is good money wasted. However, if you look carefully you can usually pick up a bargain as you can find games that were top of the full-priced games enjoying a cut-price comeback. Here are ten to look out for if you want to bag a bargain.

## Football Manager

Football Manager has got to be one of the most successful games ever. Launched in 1982 on the Spectrum and converted later for the C64 and C16 this game captures the problems of football management and presents them in a ridiculously addictive form. Although the game was written in Basic the snail pace action didn't deter it's players staying up all night to play just one more season I don't think my neighbours will ever recover from the time I won the league and cup double!

The good news is that Addictive Games is adding the finishing touches to Football Manager II, and even better news is that you can pick u a copy of the original from Prism Leisure for only £2.99.

***Touchline:***

***Title:*** *Football Manager.* ***Supplier:*** *Prism Leisure Corporation, Unit 1, Baird Rd, Enfield, Middlesex, EN1 1SJ.* ***Machine:*** *C64.* ***Price:*** *£2.99.* ***Originality:*** *7/10.* ***Playability:*** *10/10.* ***Graphics:*** *4/10.* ***Value:*** *10/10.*

## Decathlon

One of the first, and in my opion, the best of the decathlon games has been re-released as part of the Firebird £1.99 range. Both you and your joystick must endure a punishing schedule of events that includes the 100m, 110m hurdles, long jump, high jump, pole vault and the exhausting 1500 metres. The key to success is joystick waggling so make sure you have a stick that can stand the pace before you attempt to go for gold.

***Touchline:***

***Title:*** *Decathlon.* ***Supplier:*** *Firebird, 64/76 New Oxford Street, London WC1A 1PS.* ***Tel:*** *01-379 6755.* ***Machine:*** *C64.* ***Price:*** *£1.99.*

***Originality:*** *7/10.* ***Playability:*** *10/10.* ***Graphics:*** *6/10.* ***Value:*** *10/10.*

## Boulderdash

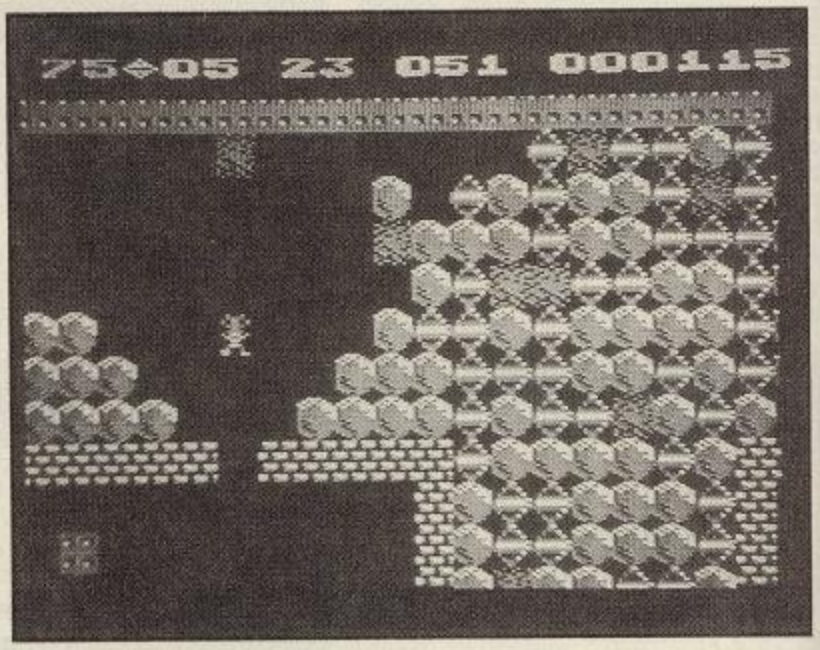

Boulderdash is one of my all time favourite arcade games and has everything that an arcade game should. It's simple to learn, horribly addictive, presents you with fiendish puzzles that you must solve in a race against the clock and it drives me mad!

The star of the game is Rockford, a little character that must collect diamonds while avoiding crushing boulders and deadly amoebas, fireflies and dragonflies.

Boulderdash was originally written by First Star and imported by Beyond and now is back for a well-deserved encore courtesy of Prism Leisure.

***Touchline:***

## Attack of the Mutant camels

The first and best bout of Minter magic as 90 feet genectically altered camels are sent to destroy the world. Armed with a short supply of high speed laser jets you must take on the massive beasts as they march relentlessly across

the scrolling landscape.

Unfortunately, genetically altered camels are formidable beasts and are coated in many layers of armour, which you must blast away while avoiding the acid bolts that the hairy horrors spit at you. Clear the screen and you'll live to face another batch of conquering camels.

***Touchline:***

***Title:*** *Attack of the Mutant Camels.* ***Supplier:*** *Mastertronic, 8-10 Paul Street, London EC2A 4JH.* ***Tel:*** *01-377 6880.* ***Machine:*** *C64.* ***Price.*** *£1.99*
***Originality:*** *9/10.* ***Playability:*** *9/10.* ***Graphics:*** *5/10.* ***Value:*** *10/10.*

## Pitfall

Another Activision game to be re-released by firebird, Pitfall is one of the few computer games that has been converted and which now appear in the arcades. In the game you play Pitfall Harry, adventurer, treasure hunter and explorer as you make your way through the inhospitable jungle and a subterranean maze that lies below.

As you'll soon find out treasure hunting isn't all that easy as you'll have to leap over barrels, swing on vines over lakes, leap crocodile pits by jumping on their heads and time your runs across the jungle so you're not swallowed up by swamps that come and go. Be warned – this game may look simple but it isn't.

***Touchline:***

***Title:*** *Pitfall.* ***Supplier:*** *Firebird, 64/76 New Oxford Street, London WC1A 1PS.* ***Tel:*** *01-379 6755.* ***Machine:*** *C64.* ***Price:*** *£1.99.*
***Originality:*** *6/10.* ***Playability:*** *8/10.* ***Graphics:*** *4/10.* ***Value:*** *10/10.*

## Fight Night

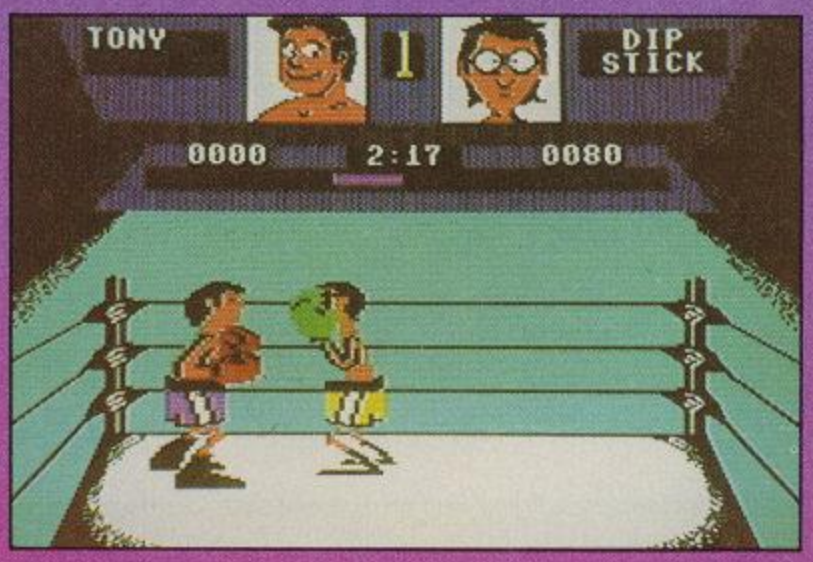

The new look, Mastertronic owned, Americana range boasts and impressive line up including this one for fight fans.

Fight Night allows you to build your own boxer right down to the colour of his shorts and then prepare him for the ring through a tough training and sparing program before tackling the opponents that stand between you and the title. Don't let appearances deceive you as what looks like an easy opponent can have a killer blow.

Treat Dip Stick with more respect than what you think he deserves as his speciality can ruin more than your career.

***Toucline:***

***Title:*** *Fight Night.* ***Supplier:*** *Americana, 8-10 Paul Street, London EC2A 4JH.* ***Tel:*** *01-377 6880.* ***Machine:*** *C64.* ***Price:*** *£1.99.*
***originality:*** *6/10.* ***Playability:*** *9/10.* ***Graphics:*** *8/10.* ***Value:*** *10/10.*

## International Karate

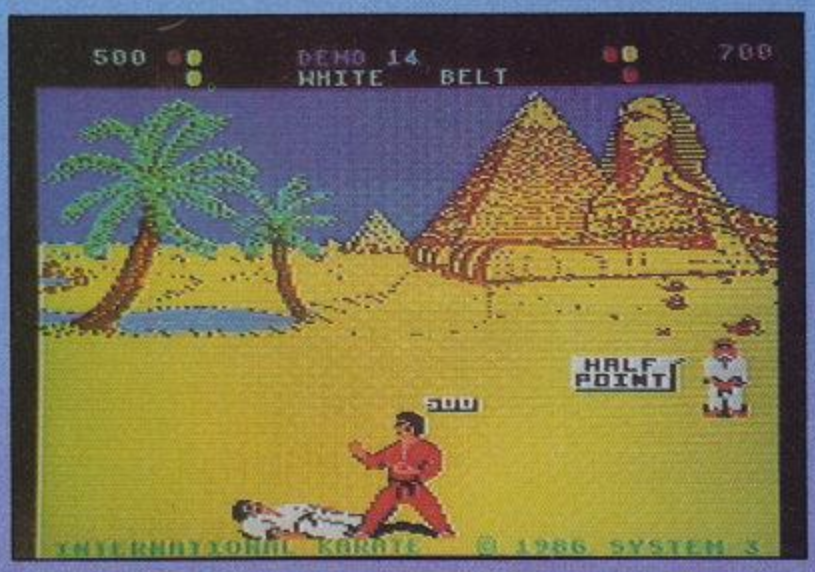

Players who prefer to use bare hands and feet to beat their opponents to a pulp will enjoy System 3's International Karate now re-released by Prism Leisure.

The game flies you around the world from New York to Sydney and on to London and the base of Mount Fuji as you lay into a human or computer controlled opponent with your sixteen Kug Fu moves. Win two out of three 30 second bouts, you could be on your way to a black belt.

***Touchline:***

***Title:*** *International Karate.* ***Supplier:*** *Prism Leisure Corporation, Unit 1, Baird Rd, Enfield, Middlesex, EN1 1SJ.* ***Machine:*** *C64.* ***Price:*** *£2.99.*

***Originality:*** *4/10.* ***Playability:*** *7/10.* ***Graphics:*** *6/10.* ***Value:*** *10/10.*

## Forbidden Forest

Take a deep breath and a firm hold of your nerves and dive into this atmospheric nightmare. Armed with only a bow and arrow you enter the forbidden forest to find and defeat the Demogorgon. Through day and night you must fight for your life as a stream of giant spiders, enormous bees, killer skeletons, massive frogs, a fire breathing dragon and the Demogoron himself attack you and aim to bring you to a hideous and bloodthirsty end.

Forbidden Forest may look a little dated but for £1.99 it's worth a look.

***Touchline:***

***Title:*** *Forbidden Forest.* ***Supplier:*** *Top Ten.* ***Machine:*** *C64.* ***Price:*** *£1.99.*
***Originality:*** *6/10.* ***Playability:*** *7/10.* ***Graphics:*** *4/10.* ***Value:*** *9/10.*

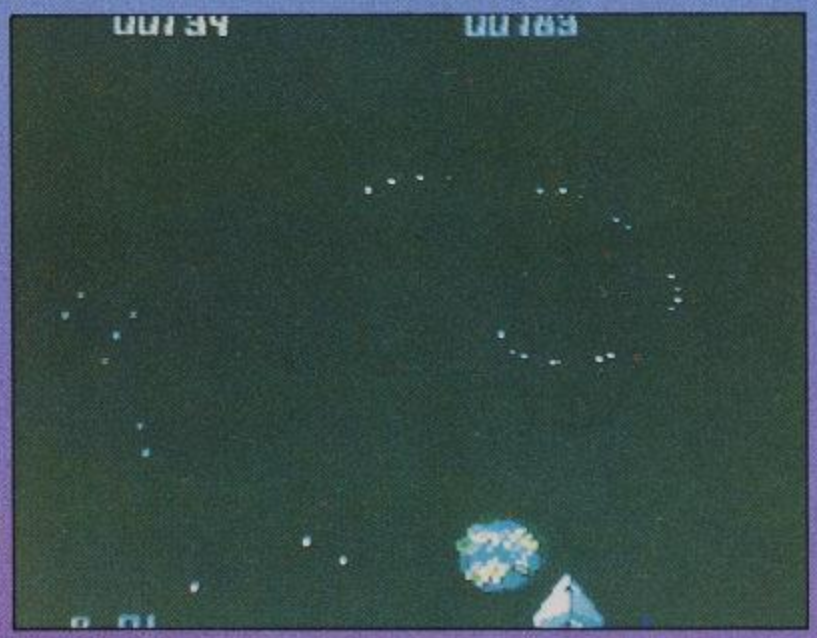

## Crazy Comets

The old classic Mad Planets arrived on the C64 through Martech's Crazy Comets and is back again as part of Mastertronic's Riccochet range. Your job is to destroy the new planets that are being formed and then are spinning out of control. The action is fast and furious and accompanied by a Rob Hubbard soundtrack.

***Touchline:***

***Title:*** *Crazy Comets.* ***Supplier:*** *Mastertronic. 8-10 Paul Street, London EC2A 4JH.* ***Tel:*** *01-377 6880.* ***Machine:*** *C64.* ***Price:*** *£1.99*

# MUSIC GRADE EXAM TIME?

**You need trained ears for music exams – Perfect Fourth AURAL trains ears.**

In every music grade examination, a section is devoted to ear testing which is called an aural test. Although the actual marks allotted for this test amount to just under a fifth of the total marks available, lack of practise in this section can profoundly effect the whole examination result.

You will no doubt remember the nervousness that you felt during your school (or even professional) exams, if you knew that you were weak in a particular subject, or perhaps even just an area of a subject.

So it is with music examinations. But with one major difference. *Aural tests are the only part of the grade exams where the student can not practice alone.* A skilled pianist is essential. Without this help, you will be entering the exams with a gap in preparation with the result that confidence is sapped. And nervousness can adversely affect the whole performance.

The result? A missed distinction or merit, but even worse..... overall failure.

And this tragic state of affairs is *not the fault of the student.* If no pianist is available to help, then you can't practise aural, having to rely on snatched moments from the weekly music lesson.

You will surely agree with music teachers that this is a totally unsatisfactory state of affairs. Daily practise is the only certain answer.

Recognising this urgent need, a practising music teacher set about solving the problem. After four years work and in consultation with the examining boards, Perfect Fourth AURAL was created. Today you can practice aural daily in your own home, totally without help.

Perfect Fourth AURAL is a remarkable computer program designed to be used on popular home micros, *needing absolutely no computer or piano skills at all.* If you can play a game - you can use aural.

Not only is AURAL intelligent - it will randomly select one of over 250 different tests available on each program - it will even show you how to conduct with cleverly synchronised graphics. This program is field-tested and has already helped students to play with much more confidence and greatly improved results.

This is what top teachers and performers say about Perfect Fourth AURAL.

GRAHAM LYONS, Performer, composer, teacher and author of the highly successful tutor, Take Up The Clarinet. *"It's fun. I wish this package had been available years ago."*

JANE PICKLES, Principal flautist BBC Concert Orchestra *"the answer to many a harrassed instrumental teachers prayer..."*

DAVID FARNON MA(Cantab) ARCM, Composer, Conductor, Performer and Teacher. *"...an excellent approach to aural training."*

# Sysres

*Add hundreds of new functions to BASIC while using only 33 new command words*

***By Allen Webb***

Reviewing this package gave me a deep feeling of nostalgia in that it took me back to the good old CBM PET days. After the initial Palo Alto HELP chips, there emerged a number of advanced tool kit packages; the most notable of these being the POWER chip and VICTREE. Certainly there were a number of similar British products but these were feeble efforts compared to the American packages. SYSRES demonstrates that things haven't changed and is the C64 equivalent to the excellent POWER package for the PET.

Enough of the spiel, what's SYSRES all about? Basically it is a toolkit to allow the easy manipulation of disk commands, programs and files.

First we have extensions to the disk operating system. These are commands which replace the extremely tedious way of accessing the disk.

```
OPEN 15,8,15,".....":CLOSE 15
```

These allow you to copy files, scratch files, call the directory, etc by use of simple commands such as @ $ and @S. OK, so that's fairly standard. One rather nice command is the list from disk (@L). This allows you to display a file direct from disk without loosing any programs in memory. The command handles sequential, relative and program files. If you think about it, this is a very handy facility with a wide range of uses.

The remainder of the package comprises about 30 other commands. These range from the usual RENUMBER, AUTO and DELETE commands through enhancements to RUN, LIST and CMD to the positively phenomenal CHANGE. Before describing some of these commands, it is worth making some points about the author's approach to the design of the package.

First of all, this package can be considered to be a true operating system. A range of enhancements such as bi-directional scrolling, key repeat, redefinition of all keys and default devices are wedged into the system. Having done this, the system recognises if you run a program and disconnects and reconnects functions to ensure that optimum speed is achieved.

Secondly, rather than just provide the basic commands, the author has crammed in as many options as his fevered imagination can dream up. RENUMBER, for example, allows you to renumber the whole program, part of it and even move a block of code. Commands such as CHANGE are even more complex.

Thirdly, maximum use is made of the many ways of storing and handling files, allowing some extremely involved operations.

For users of BASIC, there are a full range of editing tools. These include:

DELETE
RENUMBER
FIND
CHANGE
TRACE
DUMP
WHY
APPEND
MERGE

These allow you to write code, run and debug and edit it in a simple manner. Rather than slavishly describe all of these commands, I will mention those which were most outstanding.

*FIND:* This allows you to look for a specified pattern of characters. The commands is extended, however, to allow you to specify which position in each line to search, specify the areas to search and to specify pattern matching with "wild cards".

*CHANGE:* This finds a specified pattern of characters and replaces it with another pattern of characters. The command supports all the options of FIND with a claimed 700 valid combinations. The potential of the command is quite phenomenal allowing operations which would normally be very difficult to achieve in BASIC. You can, for example, concatenate lines to longer than 80 characters, remove REMS, find unresolved references or start a line with a number. I found this a potentially powerful command which required a lot of concentration preferably with a cold wet towel wrapped around your head.

*TRACE:* Most trace commands give some form of a scruffy list of line numbers on the screen which at best is unintelligible and at worst wrecks the screen format. With SYSRES, you have the choice of two optional windows at the top of the screen. The right hand window lists part of each line as it is executed and the left hand one gives the value of each variable every time it is redefined. The options to pause or slow execution or print the windows ease the viewing of the trace.

*MERGE:* This is a true merge which will interleave the program lines off disk with a program in memory.

For machine code users, these commands are even more useful allowing the preparation and editing of source codes. To allow the manipulation of source codes suitable for use with assemblers such as the

JCL assembler, PUT and GET are provided. This allows you to take advantage of the superior SYSRES functions while maintaining compatibility with the assembler. The PUT command strips off the line numbers and saves the program as a sequential file. Very handy. To aid debugging of machine code, a BREAK line is provided. This is accessed in the usual way via a BRK instruction or from a MON command. If no monitor is present, details of the page where the break occured along with the contents of the registers, etc. are given. If a monitor is present, it is entered. The package comes with a public domain monitor (XMON) with several versions at different addresses. The system also seems to work with other monitors, however. One rather bizarre feature is that the bidirectional scrolling is active, even from within the monitor. This allows you to LIST a source code or BASIC program without leaving the monitor. This offers some useful debugging features.

Those of you who use binary files will know the irritating way that the BASIC pointers are left so that any attempt to LOAD or amend programs get an OUT OF MEMORY error. To allow for this, three commands are provided. BLOAD and BSAVE allow the storage and retrieval of binary files without this problem. BRUN loads a binary file and commences execution at the start address of the code. This command also allows you to transfer parameters, provided that your code requires this. The following syntax is therefore accepted:

BRUN "myfile",parm1, parm2

A slightly stranger method of handling files is provided by the EXEC command. This command is aimed at providing a means of booting key definitions and other more esoteric functions. The BASIC program is saved as a Sequential file which can then be handled by EXEC.

Most toolkits provide a means of redefining keys, and SYSRES is no exception. Generally, these are confined to function keys, but SYSRES, somehow predictably, goes much further. On boot-up, 18 of the alphabet keys are defined with common BASIC and SYSRES commands which are accessed by pressing the LOGO key with the appropriate alphabet key. The KEY command can be used to additionally define most of the keys when used in conjunction with the SHIFT key. Redefinitions can be set up manually or by loading definitions via EXEC.

An important feature of this type of software is the need to give nicely formatted output. When listing source code or BASIC programs, SYSRES uses white for line numbers and the normal ink colour for the rest of the code. The normal scroll is changed so that you cannot accidently lose the screen contents by trying to move the cursor off the bottom of the screen. Instead, where a program is longer than the screen, you can list in either direction – a much more civilized and controlled approach. LISTing long files can be paused by pressing the SPACE BAR or slowed by pressing CTRL.

**EXTENDED EDITOR COMMANDS**

| | | |
|---|---|---|
| / | [1] | Quick load from disk |
| † | [1] | Quick load from disk with auto run |
| APPEND | [1] | Append from disk to end of current program |
| AUTO | [1] | Auto line number (allows header) |
| BLOAD | [1] | Load machine language (binary) file |
| BRUN | [1] | Load and execute machine language program |
| CHANGE | [1] | Change pattern to another pattern |
| CLOSE | [2] | Close one or all files |
| CMD | [2] | Set output to file (does not send "READY.") |
| DELETE | [1] | Delete a range of lines from program |
| DUMP | [1] | Dump all scalar variables to screen or file |
| EXEC | [1] | Execute a file as keyboard commands |
| FIND | [1] | Find occurences of a pattern |
| GET | [1] | Read a sequential file into editor |
| KEY | [1] | Define a key as a special function |
| KEYS | [1] | Turn key functions on |
| KILL | [1] | Disable SYSRES™ |
| KILL* | [1] | Disable SYSRES™ and unreserve memory |
| LIST | [2] | Improved BASIC LIST command |
| LOAD | [2] | Defaults to disk drive |
| MERGE | [1] | Merge from disk into current program |
| MON | [1] | Break to current machine language monitor |
| OLD | [1] | Restore program after "NEW" |
| PUT | [1] | Send program to disk as text file |
| RENUMBER | [1] | Renumber all or part of program |
| RUN | [2] | Run current program, ignores screen garbage |
| SAVE | [2] | Defaults to disk drive, allows replace |
| SETD | [1] | Set disk device #, allows multiple drives |
| SETP | [1] | Set printer channel, format mode, paging |
| TRACE | [1] | Select 1 of 3 trace/step modes and speed |
| VERIFY | [2] | Compare current program against disk/tape |
| WHY | [1] | Print position of last error |
| WHY? | [1] | List line of break or error |
| * | [1] | Send output to printer |
| # | [1] | Display current version of SYSRES™ |

[1] Added command
[2] Old command with improvements

**DIRECTORY ORIENTED COMMANDS**

| | |
|---|---|
| / | Quick load disk file |
| † | Quick load file with auto run |
| APPEND | Append file to end of current program |
| BLOAD | Load machine language (binary) file |
| BRUN | Load and execute machine language program |
| EXEC | Execute file as keyboard commands |
| GET | Read file into editor |
| LOAD | Same as "/" |
| MERGE | Merge file into current program |
| PUT | Send text to disk, allows replace |
| SAVE | Save program to disk, allows replace |
| VERIFY | Compare current program against file |
| @L | List file to screen |
| *@L | List file to printer (allows formatting) |
| @Cd: | Copy file to specified drive |
| @Sd: | Scratch file from specified drive |

**EXTENDED DOS SUPPORT**

@ (type "N" keyboard)
< (type "B" keyboard)
! (original keyboard)
> (for 'wedge' users)

These commands may be used interchangeably, to perform the following DOS SUPPORT functions.

| | |
|---|---|
| @ | Display disk status |
| @N | Format (HEADER) a new diskette |
| @I | Force initialize diskette |
| @V | Validate diskette (collect) |
| @D | Duplicate diskette |
| @C | Copy or concatenate disk file(s)* |
| @R | Rename file |
| @S | Scratch file(s)* |
| @$ | List directory** |
| @U: | Reset disk drive |
| @L | List disk file** |

For those of you with printers, things are even more attractive. Many commands can be sent to a printer by prefixing them by *. The nature of output and the device are set by the SETP command. By adding 64 to the device number, a formatted output can be obtained. This format option does a number of things:

- Line numbers are right justified.
- Multi-statement lines are split with one statement per line.
- Spaces are inserted between commands.
- FOR-NEXT loops are indented by level of nesting. For example, the following program:

```
90      FORI=1TO20
100     FORJ=1TO20
110     FORK=1TO20
120     PRINTI*J*K
130     NEXT:NEXT:NEXT
```

is printed as:

```
90      FOR I=1TO 20
100     FOR J=1TO 20
110     FOR K=1TO 20
120     PRINT I*J*K
130     NEXT:
        NEXT:
        NEXT:
```

The obvious value of this feature is that you can write a program as compressed as you like and still get a legible hard copy to aid debugging. So far as I could establish, SYSRES does not provide a Centronics driver.

SYSRES is hidden mostly behind the ROMs and uses only a page of memory from $CF00 to $CFFF. No indication is given of zero page or other memory usage so I assume that there are no specific compatibility problems. The manual claims that the program attempts to analyse other cartridges or programs present which might give extensions to BASIC and make appropriate allowances. I tried using SYSRES with the MIKRO assembler casrtridge with no obvious clashes. Clearly, machine code users will need to take care as to which areas of RAM are used by their programs.

## Overall Impressions

I admit that I am wary of over praising a piece of software, but in this case, I am hard pressed to fault it. So often I have seen software which dabbled with the jon it's tackling, but falls short due to carelessness or lack of attention to detail. SYSRES is not one of them. The author has gone out of his way to provide a full compliment of features and to ensure that every detail is catered for. The program shows an appreciation of the 64's operation and caters for the unusual but flexible file handling system.

The program comes on disk and not only is it unprotected, but the manual encourages the user to make a working backup. The manual comprises about a 100 pages of text held in an A5 size ring binder. The manual is well printed and reads well. Unlike many products where the manual is the last and most poorly produced item, the SYSRES manual is detailed and offers both examples for use and plenty of hints.

The price may at first appear high but for what is a *tour de force* of programming this is an investment for anybody who wishes to use the 64 to the full.

**YORK ELECTRONIC RESEARCH**

**Commodore 64/Plus 4 Products**

**6502 ASSEMBLER 64/Plus 4* ..... tape/disk* £12.99**

A sophisticated two-pass symbolic assembler and text editor which supports tape and disk filing. The assembler, the editor, and your source and object code may all be resident in memory simultaneously, facilitating rapid and interactive code development. Recently extended manual with many examples.

**Z80 EMULATOR/CROSS-ASSEMBLER 64 only ..... disk £12.99**

A unique integrated Z80 development package. The emulator compiles Z80 source code into optimised 6502 which runs on the 64 at approximately one sixth the speed of a 2MHz Z80. It supports all but 20 of the 688 Z80 operations, calls to 6502 routines, and interrupts. The cross assembler generates hex or binary Z80 object files. The disk also contains a powerful editor and several example programs.

**BI-DIRECTIONAL RS232 INTERFACE WITH COMMUNICATIONS SOFTWARE 64 +4* .. tape/disk* £29.99**

The 64 KERNAL supports RS232 via the user port. This interface provides the necessary voltage conversion for direct connection to RS232 printers, modems and other devices. It is compatible with Easyscript and Superscript. The unit is supplied with 1 metre of cable (add 75p per extra metre*) terminated in a 25-way male (or female*) D-connector. The software includes a terminal emulator which supports split baud rates and auto-dial, file transfer utilities, a menu driven port initialisation program, and a transparent printer driver which vectors the KERNAL to redirect device 4 printer output to the RS232 port.

*Please specify.

**Prices are fully inclusive. Overseas orders add £2.50**
**Allow up to 1 week for delivery**
**Manuals available separately £1.00**

# The Alternative Collection

*One of the up and coming budget software houses, Alternative Software look all set to topple some of the top ten companies from their perch at the top. Here's your chance to discover how good their games are*

***By Tony Hetherington***

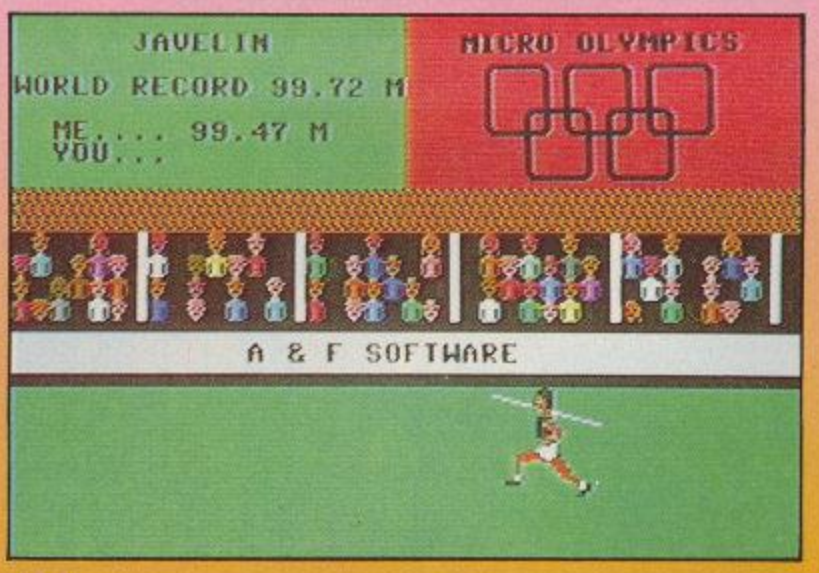

The budget games market is in a turmoil. Once the sole contenders, mighty Mastertronic has competition from Firebird who has just picked up some Melbourne House games such as Rock 'n Wrestle, Penetrator, Mugsy, Mugsy's Revenge and Sherlock Holmes from the Australian Melbourne House. This is even more incredible when you remember that Mastertronic bought the UK Melbourne House! If that wasn't enough the cut price Kings are facing the challenge of Code Masters who has gone from next to nothing to dominating the charts in under a year! Now there is a new player in the arena but can Yorkshire based Alternative Software breakthrough into the big time? As they say, the proof of the pudding is in the playing so we tested ten new Alternative £1.99 games.

## JUDO UCHI MATA

A rerelease of Martech's Uchi Mata gives you the fight of your life as you take on a human or increasingly difficult computer opponents at the ancient Japanese art of unarmed combat. Armed with just your wits and a good joystick you must literally get to grips with your opponent so you can then throw him with moves such as Tomoe-Nage, O Soto Gari, De Ashi Barai and, of course Uchi Mata.

To succeed with these moves you have to grab your opponent with a stronger grip than he's got on you and complete a series of joystick moves that will hopefully leave him flat on the mat. At the end of the game your score is accumulated and converted into an award that ranges from white belt to black belt and beyond through the Dans. A good beat 'em up that's a more subtle variation of the kicks and chops of karate.

## OLYMPIC SPECTACULAR

Eleven Olympic events face keyboard athletes in a rerelease of Database's Micro Olympics that was first released during the Decathlon boom. The events are split into three groups, running (100, 200, 400, 800, 1500 metres), throwing (javelin, discus, hammer) and jumping (long jump, high jump and pole vault).

To play the events you will need a combination of keyboard hammering and timing as you gain speed and jump or throw at the right time and are poorly rewarded for your efforts by jerky basic graphics. The running events can be particularly grueling, both on fingers and keys, as even the 1500m is a sprint!

## SOCCER BOSS

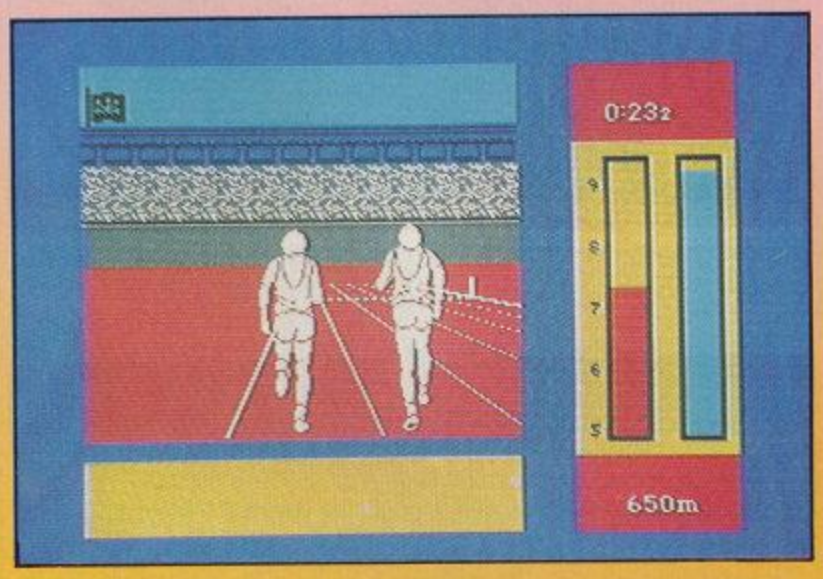

Football Games come and go but Football Manager still rules the sidelines but Soccer Boss offers a good alternative and is £1 cheaper.

The game let's the new manager of Liverpool, Scunthorpe or whatever team you choose to command firmly in the dark with only a few instructions but you'll soon guess the players with the highest skill levels are the ones to pick.

As the game proceeds, you'll have to grapple with the selection problems, injuries and even the gas bill as you strive for league, cup and even European glory. This game was originally released by Peaksoft but they only had six teams in the league, now it's back at a fraction of the cost with full divisions. Here we go, here we go, here we go!

## RUN FOR GOLD

Run for Gold is an athletics game in which skill and tactics are as important as your runners speed and stamina. You control two runners whose quest is gold in the 400 and 800, 1500 metres. However, there are forty others who want the same medals.

You begin your quest in local meetings that will qualify you for a race at Crystal Palace, then onto the European Finals and finally the Olympics.

The races are run with you in the centre of the action and you must control your pace and position on the track so that you're well placed for the closing sprint. Makes a change from the frantic waggling of the Decathlon games.

## SCARE BEAR

You are Fred Bear trapped in a nightmare brought on by eating a cheese sandwich. Unfortunately, this is no ordinary dream as it's a nightmare and is very real. You are trapped in a car in toyland and are pursued by fluffy snakes, wooden snakes, toy trucks, turtles, joysticks, ghosts and a whole host of other toys that have turned nasty and are out to get you.

Your only defence against this attack is a nuclear honeypot that delivers a toy trashing honey ball as you leap over your victims in your car that can accelerate, break and jump!

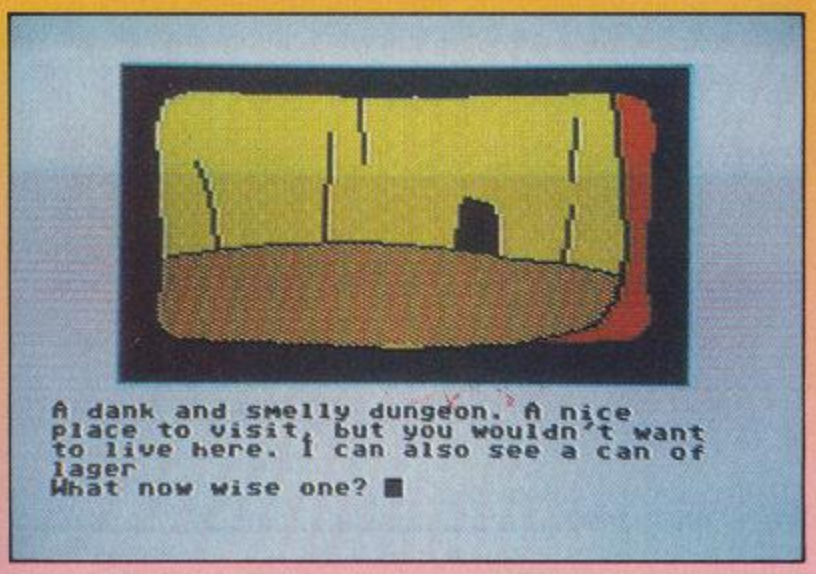

## FOOTBALL FRENZY

Football Frenzy is a football game with a difference. There are no joystick controlled players that dribble and shoot or tactics to choose as this is an adventure. Your team,

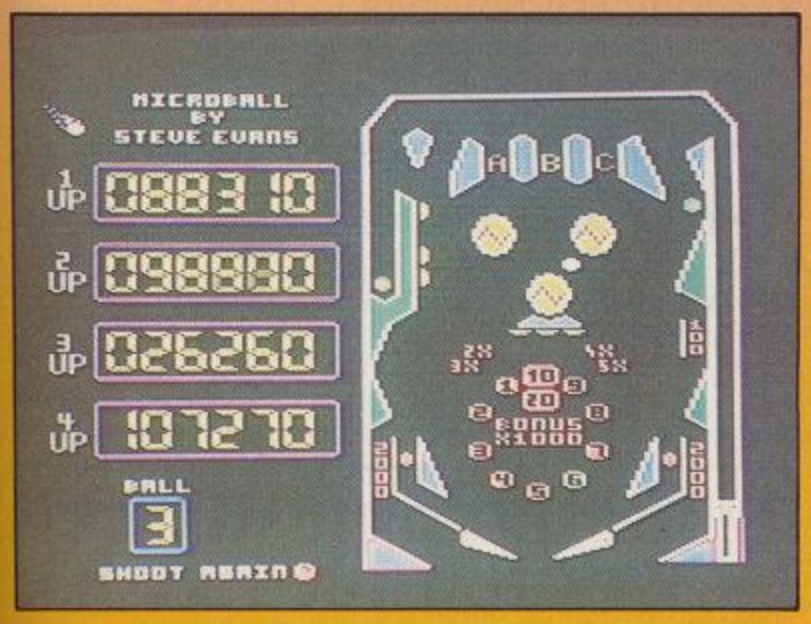

Grimsditch Rangers have somehow managed to reach the Cup Final and as manager you've just three more days before you lead the team out onto the hallowed turf. Surely nothing can go wrong! However, everything does and it's your job to get the team to the stadium on time. Two word command sentences may not seem a lot but there's a lot of adventuring packed into this program for only £1.99.

## WIZ BIZ

More budget adventuring for those who like to talk their way out of trouble. In this game of magic and mayhem you come around after a particularly heavy drinking session in the Duck and Plunger. Half-way during the evening you do your usual party piece of turning one of your friends into a black and purple Salamander. When you turned Mike, your victim back to normal he was a curious shape and didn't seem to see the funny side but instead planned revenge. Now you find yourself, complete with hangover, coming around in his Castle and the only thing in view is a can of lager!

## MICRO BALL

Being a good snooker player is supposed to be a sign of a mispent youth. Unfortunately, I chose the less profitable pastime of pinball. As a result I have hit more targets, scored more replays and claimed more extra balls than Steve Davis has potted blacks.

Up to four players can play Micro Ball or more likely you can play four games at once as you attempt to keep the ball in play, knock down sets of targets for bonus multipliers and score the 250,000 points necessary for the first extra ball (480,000 and 720,000 bring second and third extra balls).

As the scores rack up, watch out for "out shots" as a bad bounce can send the ball down one of the side channels before you can get to the tilt button.

Micro Ball occasionally defies the laws of physics as the ball seems to stop in mid air and then carries on once the program has worked out where it's going, but for £1.99 pinball wizard's will enjoy this.

## CRICKET INTERNATIONAL

There have been very few cricket games released for the C64. However fans of the willow and leather can now play 60 over limited over matches between their own teams or in a match between England and the rest of the world.

As bowler runs in he can decide where to bowl the ball and where to pitch leaving the batsman to judge the flight of the ball, decide the angle of the shot and get the bat to the ball. If you hit the ball you can attempt to run between the wickets. The fielding side can then select a fielder to run for the ball and attempt a run out if they haven't already bowled you.

This isn't an easy game to play; so don't expect to score too many centuries particularly against the computer opponent.

## RED ARROWS

Have you what it takes to fly in formation with the world's best display team? Now's your chance to find out as you jump into your Hawk and take to the skies with the elite of the RAF, the Red Arrows.

The game features two parts in which you learn how to fly a Hawk and then fly in formation with the rest of the team. The controls to fly the Hawk can be selected for the keyboard or joystick and include controls for the Hawks thrust and brakes, ailerons and elevators. Once you can keep the plane in the air and on course you're ready to join the rest of the squadron and perform formation manoeuvres such as the Diamond, Pyramid, Eagle and Manhatten. In all these formations you fly a plane at the back of the group so your screen is full of the other planes which can make it difficult to follow.

# Software for Sale

*If you think that one of our programs looks very interesting, but you can't afford the time to type it in then our software service will help you out.*

It's three o'clock in the morning. You sit at the computer Keyboard having just finished a marathon typing session entering one of the superb programs from *Your Commodore*. Your fingers reach for the keyboard and press the letters R, U and N. You press RETURN, sit back and nothing happens.

Everyone has probably faced this problem. When it does happen it's a matter of spending hours searching through the program for any typing mistakes. No matter how long you look or how many people help you, you can usually guarantee that at least one little bug slips through unnoticed.

The *Your Commodore* Software Service makes available all of the programs from each issue on both cassette and disk at a price of £6.00 for disk and £4.00 for cassette. None of the documentation for the programs is supplied with the software since it is all available in the relevant magazine. Should you not have the magazine then back issues are available from the following address:

INFONET LTD, 5 River Park Estate, Berkhamsted, Herts HP4 1HL.
TEL: (0447) 76661

Please contact this address for prices and availability.

## The Disk

Programs on the disk will also be supplied as totally working versions, i.e. when possible we will not use Basic Loaders thus making use of the programs much easier. Unfortunately at the moment we cannot duplicate C16 and Plus/4 cassettes. However programs for these machines will be available on the disk.

What programs are available?

At the top of each article you will find a strap containing the article type, C64 Program etc. So that you can see which programs are available on which format, you will also find a couple of symbols after this strap. The symbols have the following meaning:

This symbol means that the program is available on cassette.

These programs are available on disk.

## Please Note

Since the programs supplied on cassette are total working versions of the program, we do not put disk-only programs on tape. There is no sense in placing a program that expects to be reading from disk on to tape.

### OCTOBER 1987

**Shadow Boxing** — Use the memory under the C64's ROMS for storage.
**Adventure Kit** — The first module of our DIY Adventure system. (C64)
**Sprite Grabber** — Grab Sprites from other programs and save them for later use. (C64)
**Hide it** — Program protection for C64 owners.

**ORDER CODE**
**DISK YDOCT87 £6.00**
**TAPE YCOCT87 £4.00**

### NOVEMBER 1987

**ADVENTURE KIT II** — The second part of our C64 adventure writing kit.
**KERNAL II** — A pull-down menu system giving easy file handling. (C64)
**FUNCTION KEY TEMPLATE** — Use the Commodore plotter to produce templates on your C64.
**PLUS/4 AND C16 DISK MENU** — Access your disk files with ease (disk only).
**128 PREFERENCES** — Predefine your computer's default characteristics.
**NUMBER TUMBLE** — A frustrating game for the C64.

**ORDER CODE**
**DISK YDNOV87 £6.00**
**TAPE YCNOV87 £4.00**

### DECEMBER 1987

**DISKIT 8** — A memory clear routine for use with our Turbo Cruncher from March 1987 (Disk only).
**DISK MANAGER** — Pop-Up disk commands at your fingertips (C64, disk only).

**RELOCATOR** — Alter the load address of your programs (C64).
**8 SPEED SCROLL** — Powerful machine code scroll routine (C64).
**TYPRO** — A Plus/4 text editor (Disk only).
**EASY COUNT** — A word count facility for Easy Script users.
**BUDGET CALC** — Keep track of your finances (C64, disk only).
**SPRITE LIBRARY** — The first part of our sprite collection (C64).
**LISTER 128** — Produce neat C128 listing with this program (C128, disk only).
**TRACK/SECTOR EDITOR** — A powerful disk editor (C64, disk only).
**DIR COVER** — Produce your own detailed disk sleeves (C64 plus disk and printer).
**1541 FAST LOADER** — Improve your loading time (C64, disk only).
**MENU MAKER** — A menu generator for C64 owners (Disk only).

ORDER CODE
DISK YDDEC87 £6.00
TAPE YCDEC87 £4.00

## JANUARY 1988

**80 CHARACTER PRINTOUT** — Give your C64 80 columns.
**QUESTIONNAIRE 1** — An excellent quiz generator for the C64.
**ACKROYD'S SAGA**— A mathematical educational adventure (C64).
**ENLARGING THE 64** — Create large characters on the C64.
**ARRAY DISPLAY SUBROUTINES** — Improve your C64's INPUT routine.
**C64 TAPE SYSTEM** — Provide menu driven access to your C64 cassettes.
**ORDER CODE**
**DISK YDJAN88 £6.00**
**TAPE YCJAN88 £4.00**

## FEBRUARY 1988

**ACKROYD'S SAGA** — See January 1988
**ULTRA FUNCTION KEYS** — Store up to one screen of text on your C64 function keys.
**INPUT CLEAN UP** — Improved INPUT routine for C128 users.
**ADVENTURE KIT** — The parser module for our DIY adventure series.
**MORSE CODE TUTOR** — Teach yourself morse code with this program for the C64.
**GET THE POINT** — A simple joystiçk driven pointer for C64 users.
**ORDER CODE**
**DISK YDFEB88 £6.00**
**TAPE YCFEB88 £4.00**

Cassettes or disks are available from March 1986. Please ring the editorial office (01-437 0626) for details of these.

**ORDER FORM – PLEASE COMPLETE IN BLOCK CAPITALS**

# Bone cruncher

*Your chance to win one of the hottest games on the market in this month's competition*

Superior are now making their mark on the Commodore games market, and this month's competition puts your imagination to the test. Guess the names of the characters from Bone Cruncher and a copy of the game could be on its way to you. We are giving away ten games and a personal stereo to the first ten correct entries pulled out of the hat after the closing date.

## How to Enter

Simply allocate the correct name beside the relevant letter and send your entry to the address on the entry coupon.(Hint: our game of the month just happens to be Bone Cruncher!)

## The Rules

Entries will not be accepted from employees of Argus Specialist Publications and Superior Software. This restriction also applies to employees' families and agents of the companies.

The How to Enter section forms part of the rules. The Editor's decision is final and no correspondence can be entered into.

# DATEL ELECTRONICS

## 3 SLOT MOTHERBOARD

**Save wear and tear on your Expansion Port**

- ❑ Accepts 3 cartridges.
- ❑ Onboard safety fuse.
- ❑ Switch in/out any slot.
- ❑ High grade PCB.
- ❑ Fully buffered.
- ❑ Reset button.

**ONLY £16.99**

## PRINTER IV

**Now you can turn your MPS 801 into 4 printers in one!!**

- ❑ Alternative character set ROM – fitted in seconds.
- ❑ All four sets have true descenders.
- ❑ 100% compatible with all software.
- ❑ Descender. ❑ Eclipse.
- ❑ Scribe. ❑ Future.
- ❑ Choose any set at the flick of a switch.

"For anyone who uses their printer often this chip is a must. It's quick and easy to use and the end results are impressive" – Your Commodore, Jan 87.

**ONLY £19.99**

## TURBO ROM II

**Turbo Rom II is a replacement for the actual kernal inside your 64. It provides superfast load/save routines.**

- ❑ Loads most programs at 5-6 times normal speed.
- ❑ Saves at 5-6 times normal.
- ❑ Improved DOS support including 10 sec format.
- ❑ Programmed function keys:- load, directory, old, etc.
- ❑ Return to normal kernal at flick of a switch.
- ❑ FCOPY – 250 block file copier.
- ❑ FLOAD – special I/O loader.
- ❑ Plus lots more.
- ❑ Fitted in minutes – no soldering usually required. (On some 64's the old ROM may have to be desoldered).

**ONLY £14.99**

## DIGITAL SOUND SAMPLER

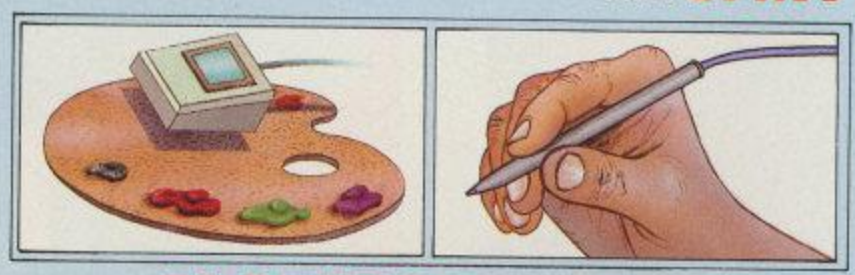

- ❑ The new sampler allows you to record any sound digitally into memory and then replay it with astounding effects.
- ❑ Playback forwards/backwards with echo/reverb/ring modulation etc.
- ❑ Now with full sound editing module to produce outstanding effects.
- ❑ Full 8 bit D to A and ADC conversion.
- ❑ MIDI compatible with suitable interface. (I.e. Datel unit for £29.99, see ad).
- ❑ Live effects menu includes real time display of waveforms.
- ❑ Line in/mic in/line out/feedback controls.
- ❑ Powerful sequencer with editing features.
- ❑ Load/save sample.
- ❑ Up to 8 samples in memory at one time.
- ❑ Tape or disk (please state).
- ❑ Complete software/hardware package **£49.99**

❑ Com-Drum software is available separately at **£9.99** to turn your Sampler II into a Com-Drum system as well as a sampling system.

## DATA RECORDER

- ❑ Quality Commodore compatible data recorder.
- ❑ Pause control. ❑ Suitable for 64/128.
- ❑ Counter. ❑ Send now for quick delivery.

**ONLY £24.99**

## BLAZING PADDLES

**A complete lightpen/graphics illustrator package.**

- ❑ A fully icon/menu driven graphics package of a calibre which should cost much more.
- ❑ Complete with a fibre optical lightpen system for pin point accuracy.
- ❑ Multi feature software including:
  - Range of brushes • Airbrush • Rectangle • Circle • Rubberbanding • Lines • Freehand
  - Zoom mode • Printer dump • Load/save • Advanced colour mixing – over 200 hues!!
  - Cut and paste allows shapes/windows/pictures to be saved to/from tape/disk.
- ❑ Blazing Paddles will also work with many other input devices including; Joysticks, Mice, Graphics Tablets, Trackball etc.
- ❑ Pictures can be saved from Action Replay and edited with Blazing Paddles.

Complete Blazing Paddles & Lightpen **ONLY £24.99**

Blazing Paddles available separately for **£12.99**

## COM-DRUM

**Digital Drum System**

- ❑ Now you can turn your computer into a digital drum system. ❑ Hardware/software package.
- ❑ 8 digital drum sounds in memory at one time.
- ❑ Complete with 3 drum kits.
- ❑ Real drum sounds – not synthesised.
- ❑ Create superb drum rhythms with real and step time. ❑ Full editing. ❑ Menu driven.
- ❑ Output to hi-fi or through tv speaker.
- ❑ Load/save facilities.

**ONLY £29.99** (state tape or disk)

## SMART CART ™

**Now you can have an 8K or 32K cartridge that you program like RAM then acts like ROM!**

- ❑ 8K or 32K pseudo ROM.
- ❑ Battery backed to last up to 5 years (lithium battery).
- ❑ Simply load the program you require – then flick the switch. The cartridge can then be removed just like a ROM cartridge.
- ❑ Make your own cartridges including autostart types – without an EPROM burner.
- ❑ Can be switched on or off board via software.
- ❑ I/O 2 slot open for special programming techniques.
- ❑ 32K version has 4 x 8K pages.
- ❑ Some knowledge of M/C is helpful – but full instruction are provided.

**8K VERSION £14.99**
**32K VERSION £29.99**

## TOOLKIT IV

**The ultimate disk toolkit for the 1540/1541**

- ❑ A disk toolkit is an absolute must for the serious disk hacker. Toolkit IV has more features than most for less.
- ❑ DISK DOCTOR V2 – Read and write any track and sector including extra and renumbered tracks. Repair damaged sectors. Look underneath read errors.
- ❑ HEADER/GAP EDITOR – Decodes and displays ALL header information including off bytes and header gap. Rewrite the entire header and header gap. Renumber sectors. Also edit any sector tail gap.
- ❑ DISK LOOK – Sort directory. Recover lost files. Display file start/end addresses. Disassemble any file program directly from the disk to SCREEN or PRINTER including undocumented opcodes. Edit Bam. Much, much more.
- ❑ FILE COMPACTOR – Can compact machine programs by up to 50%. Saves disk space. Compacted programs run as normal.
- ❑ FAST DISK COPY – Copy an entire disk in 2 minutes or less using single 1541.
- ❑ FAST FILE COPY – Selective file copy. Works at up to 6 times normal speed.
- ❑ FORMATTER – 10 second format an entire disk or format any individual track or half track 0 to 41. Redefine any of 30 parameters to create or recreate unique disk formats.
- ❑ ERROR EDIT – Quickly find and recreate all read errors including extra and renumbered tracks or sectors and half tracks from 0 to 41. Even recreates data under errors and allows you to redefine any necessary parameters.

**ONLY £9.99**

## SMARTCART UTILITIES

A series of utility programs for use with Smartcart. Simply load in the program and you have a powerful cartridge. When you have a different requirement – load in another program and you have a new cartridge. The process takes seconds, and can be repeated any number of times.

We intend to release a range of programs. The first available are:

## DISKMATE II

❑ all the features of Diskmate II (see ad).

Loaded in seconds – with full instructions. **ONLY £9.99**

## RAM DISK

- ❑ Turn your Smart Cart into a 32K RAM/disk.
- ❑ 32K of instant storage area for files/programs.
- ❑ Load/save instantly.
- ❑ Disk type commands: load, save, directory, scratch.
- ❑ Program data retained when computer is switched off!
- ❑ Full command set with instructions.

**ONLY £9.99**

## ROBOTEK 64

**Model & Robot Control made easy**

- ❑ Robotek 64 is a comprehensive hardware/software package which enables you to connect your 64/128 to the outside world.
- ❑ 4 output channels – each with onboard relay
- ❑ 4 input channels – each fully buffered TTL level sensing.
- ❑ Analogue input with full 8 bit conversion.
- ❑ Voice input for voice control.
- ❑ Software features:- test mode/analogue measurement/voice activate/digital readout etc.
- ❑ Excellent value! **ONLY £39.99**

including hardware/software/mic etc. (State tape or disk)

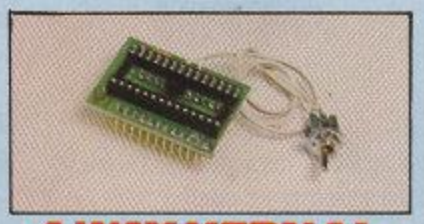

# DATEL ELECTRONICS

## 256K SUPEROM EXPANDER

- ❑ Now you can select from any of 8 32K EPROMs instantly.
- ❑ 8 sockets to accept upto a 32K EPROM in each.
- ❑ On board operating system – no programs to load.
- ❑ Program your own EPROMs using our EPROM programmer.
- ❑ No need to have loads of cartridges – just make a selection from the Superom menu.
- ❑ Directory of utilities on power up.
- ❑ Fully menu driven on power up.
- ❑ Select any slot under software controls.
- ❑ Unique EPROM generator feature will take your own programs – basic or m/c and turn them into autostart EPROMs. (EPROM burner required).
- ❑ Accepts 2764/27128/27256 EPROMs.
- ❑ On board unstoppable reset.

**ONLY £29.99**

## 4 WAY KERNAL BOARD

- ❑ This board fits in place of the kernal in your 64 and accepts a 16K or 32K replacement kernal giving 2 or 4 different operating systems.
- ❑ Just flick the switch supplied to select between systems.
- ❑ This is a carrier only – ready to accept your own chip.
- ❑ Now you can have all your different systems available at one time.

**ONLY £8.99**

5 WAY BOARD **ONLY £12.99**

## CLONEMASTER™

- ❑ Makes tape to tape back-ups.
- ❑ Works with even Turbo Loaders etc.
- ❑ Requires access to two CBM type data recorders.
- ❑ Makes perfect copies.
- ❑ Very simple to use.
- ❑ LED level indicator.

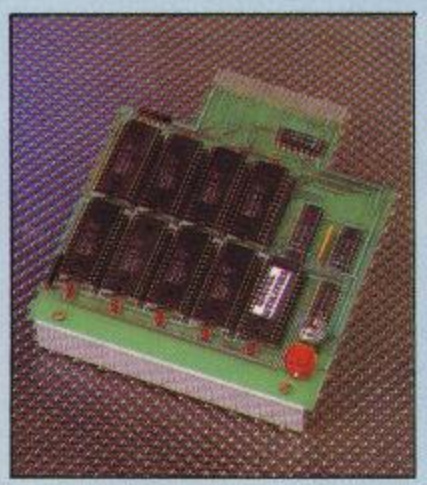

**ONLY £9.99** POST FREE

## RESET CARTRIDGE

- ❑ Unstoppable reset button.
- ❑ Resets even so called "unstoppable" programs.
- ❑ Add pokes from magazines etc.
- ❑ Fits in cartridge port.
- ❑ Simply plug in.

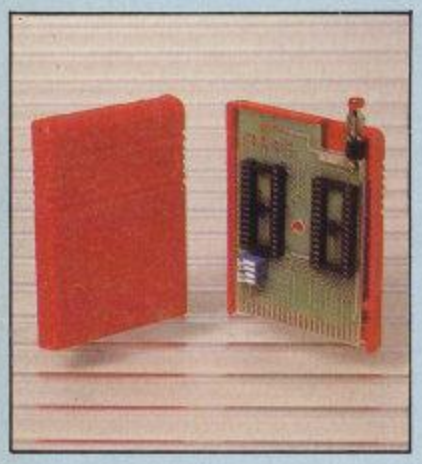

**ONLY £5.99**

## DUPLIKATOR™

- ❑ Copies whole disk in one pass – only one drive required!
- ❑ Makes back-up copies in eight seconds!!
- ❑ Duplikator is the fastest, most efficient and easiest to use disk copying system ever conceived.
- ❑ Comes complete with 256K on-board ram and it's own operating system – no software to load.
- ❑ Makes multiple copies from one original.
- ❑ Full disk verification during back-up process.
- ❑ Copies standard software as well as errors 21-29 and upto 40 tracks.
- ❑ Full disk error check in eight seconds.
- ❑ Full disk verify against ram in fifteen seconds.
- ❑ A must for clubs, user groups etc. How else can you copy over 250 disks and hour for less than £100.
- ❑ Comes complete with on/off switch and reset button.
- ❑ Fitted in minutes – no soldering usually required.

**ONLY £89.99**

## 16K EPROM BOARD

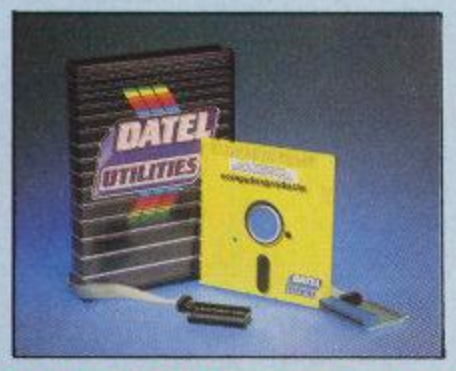

- ❑ Accepts 2 x 8K EPROMs.
- ❑ Switchable to configure as 2 x 8K or 16K or off.
- ❑ On board unstoppable reset.
- ❑ Full instructions.

**ONLY £8.99**

## DISK NOTCHER

- ❑ Quickly and easily double your disk capacity.
- ❑ Use both sides of your disks.
- ❑ Simple to use.
- ❑ Takes seconds.

**ONLY £4.99**

## DEEP SCAN BURST NIBBLER™

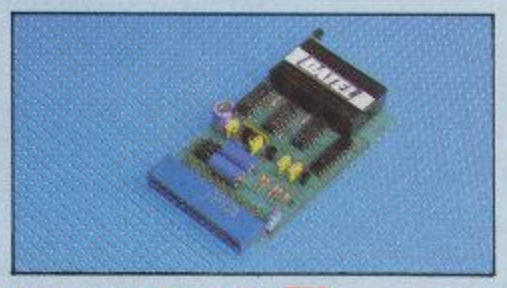

- ❑ The most powerful disk nibbler available anywhere, at any price!
- ❑ Burst Nibbler is actually a two part system – a software package **and** a parallel cable to connect the 1541/1570/1571 to 64/128 (state type).
- ❑ What gives Burst Nibbler its power? Conventional nibblers have to decode the data from the disk before it can transfer it using the serial bus – when non standard data is encountered they are beat. Burst Nibbler transfers data as raw GCR code via the parallel cable without the need to decode it so you get a perfect copy of the original.

● Will nibble upto 41 tracks. ● Copy a whole disk in under 2 minutes. ● Full instructions.
● Regular updates – we always ship the latest. ● Fitted in minutes – no soldering usually required.
● Full or ½ tracks. ● No need to buy parallel cable if you have Disk Demon/Dolphin etc.
● Cable has throughbus extension for other add ons.

- ❑ Whether to choose FastHack'em or Burst Nibbler? Fast Hack'Em is unbeatable value as an "all-rounder" – with nibblers, 1 or 2 drive copy, format, file copy, 1571 copy etc. etc., so if you have a more general requirement perhaps FastHack'Em is for you. Burst Nibbler is a pure nibbler second to none, for the reasons stated. So if it's just making backups you are interested in, there is no other product to beat it.

**ONLY £24.99 COMPLETE**

**SOFTWARE ONLY £12.99 CABLE ONLY £14.99**

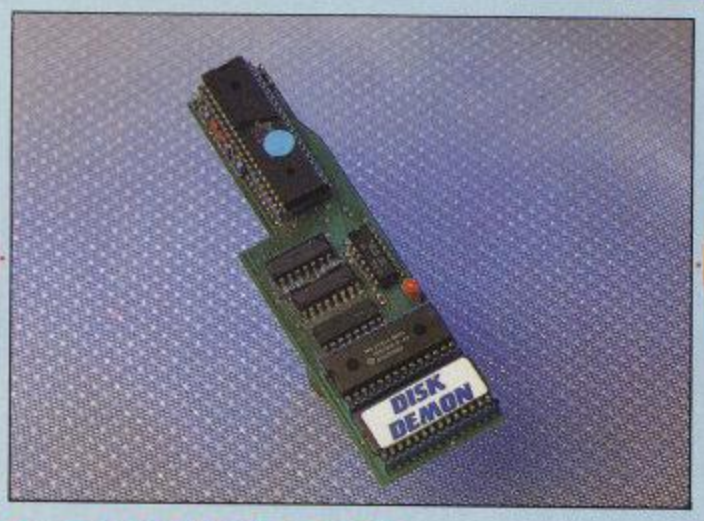

## EPROMMER 64™

- ❑ A top quality, easy-to-use EPROM programmer for the 64/128.
- ❑ Fully menu driven software/hardware package makes programming/reading/verifying/copying EPROMs simplicity itself.
- ❑ Will program 2716, 2732, 2764, 27128 and 27256 chips. 12.5, 21 or 25 volts.
- ❑ Fits into user port for maximum compatibility with cartridges/Superom Board etc.
- ❑ Full feature system – all functions covered including device check/verify.
- ❑ We believe Eprommer 64 is the most comprehensive, most friendly and best value for money programmer available for the 64/128.
- ❑ Ideal companion for Superom Board, Cartridge Development System, our kernal expanders or indeed any EPROM base project.
- ❑ Comes complete with instructions – plus the cartridge handbook.

**ONLY £39.99 COMPLETE**

# DATEL ELECTRONICS

## PROFESSIONAL DOS © MIKROTRONIC

**£64.99 POST FREE with Disc Demon operating system**

**"The world's fastest parallel operating system"**

- ❑ Loads a typical 202 block program file in under 3 seconds!
- ❑ 60x faster load (PRG files).
- ❑ 25x faster load (SEQ files).
- ❑ 20x faster save (PRG files).
- ❑ 20x faster save (SEQ files).

**PLUS** AN ADVANCED COMMAND STRUCTURE INCLUDING:

- ❑ Fast format – up to 40 tracks (749 blocks).
- ❑ 16 function keys: list, run, load, directory, format, save, old, verify, etc.
- ❑ Fload will fastload files up to 250 blocks (other similar systems will only cope with 202 blocks).
- ❑ Number conversion. ❑ Reset.
- ❑ Unique built in file copier will copy files up to 250 blocks like lightning – multiple copy options – perfect for copying Action Replay files.
- ❑ Highly compatible with commercial software – can be switched out for non compatible programs.
- ❑ Perfect for use with Action Replay 3 – a typical AR3 backup will reload in about 3 seconds – yes 3 seconds!
- ❑ Speeds up other DOS functions including verify, scratch etc.
- ❑ Comes complete with superfast file and whole disk copier free!
- ❑ Screen on or off during loading.
- ❑ Enhanced command set – over 30 new commands.
- ❑ Easily fitted – Disk Demon plugs inside the 1541 and the new operating system chip plugs inside the C64/128. Fitting takes only minutes and usually requires no soldering.
- ❑ User port throughbus supplied free – you could pay £15.00 for this alone.
- ❑ Supplied complete – no more to buy.
- ❑ Works on C128/1541 in 64 or 128 mode.

**C128 version**

**£69.99**

## BLUE CHIP DRIVE

● **Fully C64/128 compatible.**

- ❑ At last a top quality drive at a sensible price.
- ❑ Super slimline case
- ❑ External power supply for cool operation.
- ❑ Direct drive motor.
- ❑ Supplied complete with all cables – no more to buy.
- ❑ This drive is now probably the most compatible drive available for the Commodore. More so than even Commodores own 1541C. Much more so than other so called compatibles. In fact we have been unable to find a program including the latest that would not work. (At time of Press).
- ❑ **No need to look elsewhere – this is the best.**

**ONLY £139.99 POST FREE**
**(If you require courier delivery add £5.00).**

## ULTRA CRUNCHER

● **The ultimate cartridge based program compactor.**

- ❑ Compacts by upto 30%!
- ❑ More programs for disk.
- ❑ 3 compacting programs on one cartridge.
- ❑ Fast loading/saving routines – works with Disc Demon.
- ❑ Can even further compact AR III files!
- ❑ 250 block file copy function.
- ❑ Full DOS support including fast format.

**ONLY £12.99 on cartridge.**
**Available as chip only for 256K Superom Board for only £7.99**

## FAST HACK'EM ™

● **Multi Module Disk Nibbler – all on one disk.**

- ❑ Single 1541 Nibbler – Copy a disk in 2 minutes.
- ❑ Auto Nibbler – Copy an entire protected disk in 3 minutes.
- ❑ Super fast File Copy – Under 9 seconds typically.
- ❑ Copes with Fat Tracks.
- ❑ Superfast Copy – Entire disk in 36 seconds with verify.
- ❑ Twin Drive Copier – Even faster!
- ❑ Plus unique "Parameters" mode. These files "Unlock" the more heavily protected programs with a parameter for a particular brand or even single program.
- ❑ **No other product is such a good "All Rounder" at this price its unbeatable.**

**ONLY £9.99 POST FREE**

## DISKMATE II

**The Disk Utility Cartridge**

- ❑ Disk fastload cartridge.
- ❑ Up to 5 times faster.
- ❑ Fast save. ❑ Fast format (10 secs).
- ❑ Improved DOS – single stroke commands – load/save/dir/old etc.
- ❑ Redefined function keys for fast operation of common commands.
- ❑ Powerful toolkit commands including: old/delete/merge/copy/append/autonum/linesave etc.
- ❑ Plus a full machine code monitor – too many features to list but it has them all!
- ❑ Special switching techniques make Diskmate invisible to the system. Therefore it is a more compatible fastloader than other types.
- ❑ Diskmate II is

**ONLY £14.99**

## MIDI 64

**A Full Midi Interface for the 64/128 at a realistic price**

- ❑ MIDI in. ❑ MIDI thru. ❑ 2 x MIDI out.
- ❑ Compatible with most leading software packages including: Sell, JMS, Advanced Music System, Joreth, Steinburg etc.

**ONLY £29.99**

## MOUSE

- ❑ CBM 64/128 mouse.
- ❑ Wide compatibility with software including: Blazing Paddles.
- ❑ Works by mimicking joystick so will work in any joystick application including graphic packages only designed for joystick.
- ❑ Functions on either joystick port.
- ❑ Optical system operation.

**ONLY £24.99**

## CHIPS

- ❑ 27128 **£3.00 EACH**
- ❑ 27256 **£4.50 EACH**

## CARTRIDGE DEVELOPMENT SYSTEM

- ❑ All the necessary parts to produce an 8K/16K auto-start cartridge.
- ❑ Top quality PCB. ❑ Injection moulded case.
- ❑ Reset switch. ❑ 16K EPROM.
- ❑ "Cartridge Handbook" gives full details and tips on building and configuring the cartridge for many uses.

**ONLY £12.99**
**complete with handbook**

# Through the RoundWindowII

*We conclude the instructions for WEOS and give you a demo to play with*

***By Rony van Hae and Bant Duchesne***

Pull down menus, windows and joystick driven pointers are no longer difficult for Basic programmers to access with WEOS. Continuing on from last month's mammoth program we give you the remainder of the programming information you need to use WEOS together with a demo program (at the rear of the magazine) which illustrates how to use some of the WEOS commands.

## CHECK LIST

• Due to a small programming mistake you can't define a shadow colour. If you specify a comma after the text string, follow it directly by another comma – you have to use a value or a variable instead.
Wrong: MENU 1,.....,a$,,1,2
Right: MENU 1,.....,a$,2,,1

• The position where the window will be printed depends on all the menus which have a lower number. Sounds confusing? Well it isn't, let's imagine the following:
You've got three menus with the following names:
'DESK','FILES','OPTIONS' as you can see the headers have a length of 4,5 and 7 characters. So the first menu starts at 0 (begin position) and the second menu starts at the fifth position and the last menu at the eleventh position. Each menu will be separated with a space as you can see.

Since the print position is calculated by the other menus, you'll have to be careful with the x-length of the window. Let's imagine the following: you have already defined six menus and the seventh (which you want to add) starts at position 36 but the length of the window is 16, as you can see this wrong because the sum of xp and xl exceeds 40...

• The x-length of the window also depends on the shadow flag, if this is set to one, you have to add 1 to the x-length. So remember: x1+xp+sh may not be greater than 40.

• Watch out that the length of the names of the options may not exceed the (x-length)-2.

• Sometimes when you define menus and you define different colours, you can discover that the inverted option line when you choose an option has two colours!
This is because WEOS will not fill up the remaining gap of characters, to solve this problem, fill each option (after the menu text of course) up with spaces. Try this:

```
10 MENU 1,10,2,1"HEADER←
OPT1←OPT2 ↑",5,11,1
20 DESK 94:MENU 1 ON:PAUSE 0
```

Run it and go to an option (first turn your pointer on) and click the button. As you will see the inverted line has two colours! To cure this, modify line 10 to:

```
10 MENU 1,10,2,1,"HEADER←
OPT1(4 spc)←OPT2 (4spc) ↑",4,11,1
```

Run it again. This time it is perfect.

MENU(x) : returns menu values
x can be: 1...returns selected option
2...returns selected menu e.g.
10-20 take lines of the first example of menu
30 DESK 94
40 WEOS 2: REM Hunt for symbols & menus
50 IF MENU (0)=0 goto 40
60 SOPEN 10,6:WPRINT"MENU:"; MENU (0)
70 WPRINT"OPT:"MENU (1)
80 PAUSE 0:SCLOSE:GOTO 40

Run it. Try different menus and options! When you select nothing, MENU(0) and MENU (1) will return a null.

As mentioned earlier this command gives you the first way to read data when WEOS is performed.

• Some people may ask themselves why I added the commands MENU ON and MENU OFF since WEOS 2 does all the work for you. Well this is because some people don't have a joystick or a mouse.

One final note – if you select a menu it is possible that nothing will happen. This is because the computer is too fast. To solve this problem try this:
POKE 39251, delay (1=very fast;255=very slow)

**CHECK**
Syntax: x=CHECK (a$, asc)
Mode: all.
Output: all.
This is a fairly primitive implementation of INSTR. CHECK scans the string (a$) for a character (asc), if it is found it will return the place in the string where the character is.

This function was added because I didn't include a WINPUT command, you can stimulate it with this command. Look in our desktop program, to find out how we did it.

**TYPE**
Syntax: TYPE (x)
Mode: all.
Output: all.
This function is the data read function of WEOS.
When you perform WEOS, it changes a lot of data in your computer, to read it out, use this command!
TYPE(0): which type of character has collided with the pointer?
0...nothing
1...a special symbol
2...a menu !
If TYPE(0) returns a zero, TYPE(1) will return wrong values (so you first have to check TYPE(0)).
If TYPE (0) returns a 1, TYPE (1) will return the symbol number.
When TYPE(0) returns a 2, TYPE(1) will work the same as the MENU(0) command. The special symbols are:

| Symbol | Value | Poke Code | PETASCII |
|---|---|---|---|
| ▭ | 1 | 121 122 | 185 186 |
| ▭ | 2 | 123 124 | 187 188 |
| ▯ | 3 | 93 | 125 |
| ↑ | 4 | 30 | 94 |
| → | 5 | 92 | 124 |
| ↑ | 6 | 91 | 123 |
| ← | 7 | 31 | 95 |

Symbols 1 and 2 are at both edges of an APW (can be used as CLOSE WINDOW for symbol 1 and MOVE WINDOW for sumbol 2). Symbol 3 is used in most cases as OK symbol, symbol codes 4-7 are arrow codes which can be used as markers or something different (e.g. Preference Manager in DeskTop.)

• The symbols have no special meaning to the computer but to the user, each can have its own meaning and thus you still have to write the routine to perform it.

**WOPEN**
Syntax: WOPEN xp,yp,xl,yl,header (,wc(,sh(,sc)))
Mode: all.
Output: screen.
Yes, at last windows. This instruction opens a window; an APW to be precise. When you try to open a window when there is still another window, type on screen (SW or PDM) an error is printed, this also happens if the limit of opened windows is reached (you can open up to 4 APW).

Let's look at the paras:
xp .... 0-39
yp .... 0-24
xl .... 6-40
yl .... 3-25
sh .... 0-1

xp,yp indicates the cursor position where the window will be printed. xl and yl specify the window size and the sh indicates if a shadow is needed (1=yes,0=no). A 'BAD WINDOW PARAS ERROR' can happen if:
- the paras are out of range.
- the sum of xl+xp+sh exceeds 40
- the sum of yl+yp+sh exceeds 25.

They may not contain any control character (such as colour codes or CR). The header string may not be greater than xl-6, and if you want no header simply create an empty string. The window cursor is now at (0,0). This is the upper left corner of the window, and also means that the maximum characters allowed on a line before it skips to another line is xl-2.

Any screen/window operation is now in this window. (except INPUT, error messages and disk status reports), e.g.
WOPEN 2,4,20,10," "
WOPEN 5,10,10,7,"HELLO"

wc,sc indicate the colour for resp. window and shadow. Just like the shadow flag those too are optional.

**WSWAP**
Syntax: WSWAP
Mode: all.
Output: windows (APW).
This command switches 2 windows, it deactivates the first one and activates the window after it. All operations are now at the new activated window.

• You need at least 2 APWs otherwise you'll get an error, e.g.
10 WOPEN 1,1,20,5,"":WOPEN2,3, 30,16,"WINDOW2"
20PAUSE 0:WSWAP:WPRINT"Hey ...": PAUSE 0:WSWAP
30 WPRINT"YES..."

When there is still another type of window on your screen you will get an error.

**WCOPY**

Syntax: WCOPY xp,yp
Mode: all.
Output: screen.
This is almost the same as WMOVE with the exception that the system copies the window to another position (thus creating another window. If there are already four windows on screen and you try to WCOPY you'll get an error. You can only copy APW. The cursor (window) position in the window will be saved and placed on the other new (identical) window on your screen. e.g.
Add following line to the previous program:
40 PAUSE O:WCOPY 7,1:PAUSE O:WMOVE 5,7:WPRINT"YEP"
This will demonstrate you what WCOPY really can do!

If a 'BAD WINDOW PARAS ERROR' occurs see above.

**SOPEN**

Syntax: SOPEN xl,yl(,wc(,sh(,sc)))
Mode: all.
Output: screen.
This command opens a static window (SW). The only difference between APWs and an SW is that they don't need a start position. It is calculated automatically for you and centred in the middle of the screen (nice hey??). You simply have to specify the window size. When you try to open an SW there is still an PDM or a SW on screen, an error is printed. However, this will not happen if there still is an APW on your screen.

The border of a SW is also different (like any different window type). A SW has the highest priority, (lowest has a APW and a PDM is among them). Well what does this mean? It means that *you have to close it first by SCLOSE before you can use commands such as wcopy or wswap.* And this is the reason why each time you try to open a PDM or APW when there is still a SW on your screen an error is given. The last three paras have the same function as by APW and PDM. e.g.
SOPEN 30,10,4,1:WPRINT"THIS WAS THE LAST INSTRUCTION"

**WMOVE**
Syntax: WMOVE xp,yp
Mode: all.
Output: screen.
A window manipulation command alters the draw pointer to another position. If a bad paras error occurs look at WOPEN for explanation. If no window or a wrong type is present on your screen, an error report is printed, e.g.
10 WOPEN 2,2,10,6,"MOVE",2,1,12:PAUSE 0
20 WMOVE 4,7:WPRINT"MAGIC"
30 PAUSE 0:WMOVE 9,10:WPRINT "HELLO"

## Coming Soon

You now have all of the programming information required to put WEOS to use. The demonstration program in this issue should make use of the program even easier.

In the next instalment, WEOS will provide you with a desktop environment, written completely in WEOS BASIC.

Should you produce any utilities yourself using WEOS BASIC please send them in.

*See listings on page 102*

# TELETEXT

A world of information at your fingertips

The Microtext adaptor turns your C64 or C128 into a sophisticated Teletext Receiver. Giving you full colour display of any of the free pages from Ceefax or Oracle. As well as news and sports results, there is road, rail and air travel information, whats on TV and weather reports. You can get an update on share prices or bargain holidays. And not only does Teletext cater for special interests, like computing, motoring, or gardening, but you'll also find things to do and places to go in your area, prize competitions and even your daily horoscope, plus much much more. It's all free, easy to use and it's all at your fingertips.

A page like a recipe or a weather map may be saved to disc or cassette or even printed out and the manual has examples and shows how to access and use Teletext from your own programs, the ability to use live information like football results, exchange rates or weather conditions, provides possibilities limited only by your imagination.

The adaptor fits neatly on the user port of the Commodore. A lead goes to the 'VIDEO OUT' socket of your video recorder so using your Video as the Tuner for the system.
Just **£69.95 inc P&P** (Overseas add £2.00)

"I wouldn't hesitate to recommend this to anyone"
— Your Commodore Jun 87

**MICROTEXT TUNER NOW AVAILABLE**

Our own Tuner has been specially designed to provide the signal that the Adaptor needs, thus eliminating the need for a video recorder. Just plug in an aerial, it tunes itself in (!) and channels are selected from the keyboard. The whole system consists of a Microtext Adaptor, Tuner, Power supply, lead and manual and costs just **£114.80 inc P&P** (128D cersion add £8.50) Only from:-

**MICROTEXT**
**Dept YC, 7 Birdlip Close, Horndean, Hants. PO8 9PW**
**Telephone: 0705 595694**

# THE MPS803 PRINTKIT IV

*AT LAST*
Top quality performance from your MPS803 Printer. Simply fit 'PRINTKIT IV' directly to your MPS803 printer and you will get:

*TRUE DESCENDERS *A BOLD OPTION
*UNDERLINING *ITALICS

And up to 50% speed increase!

All facilities are fully CBM compatible "'PRINTKIT IV' is a very impressive upgrade kit" CCI Nov '87.
"Will give your MPS803 a new lease of life" YC Dec '87.
Send just £30.00 to join the hundreds of satisfied customers.

**NEW!** Coming soon... Connect your MPS803 DIRECTLY to your Amiga, ST, PC,... Full information when you order 'PRINTKIT IV'.

We also supply: Ribbons, Tractor feeds, Serial leads etc. Call for details.

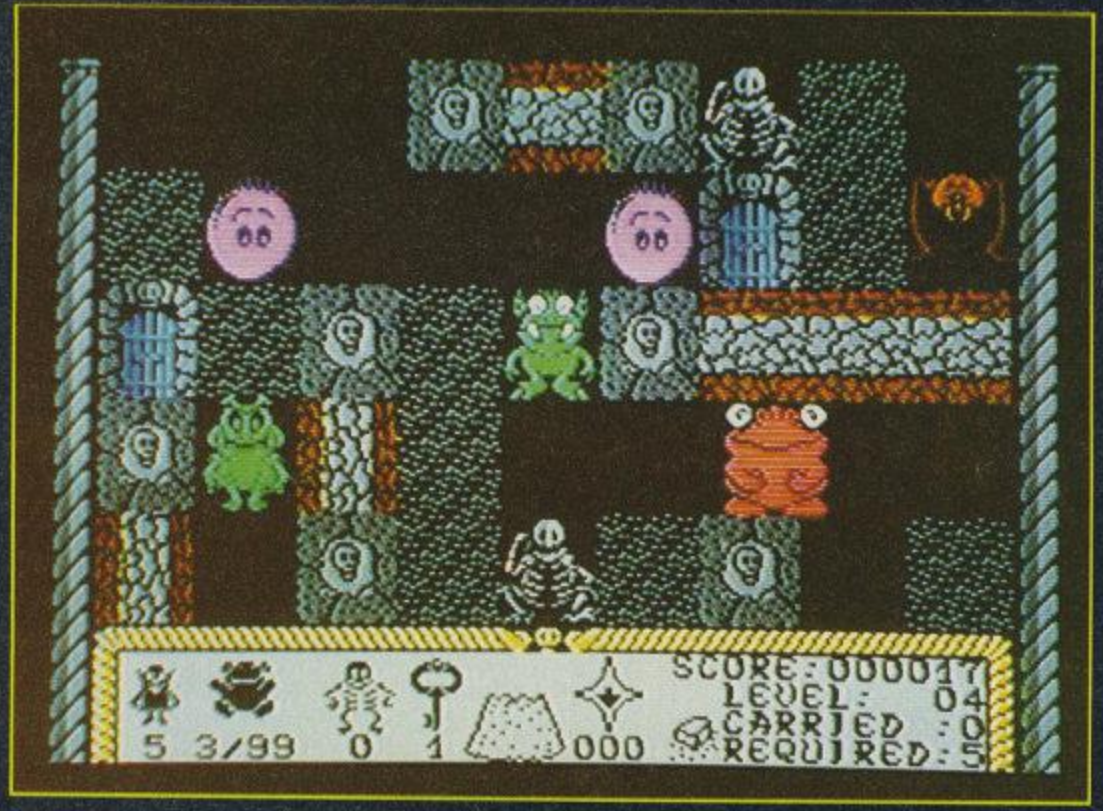

**AVON PRINTER TECHNOLOGY**

SWINDON HOUSE; 4 HOWARD ROAD; SOUTHVILLE; BRISTOL BS3 1QH. Telephone BRISTOL (0272) 354116
(enquiries from non-UK Distributors welcome)★ add £2.00 P&P for overseas orders
7 days delivery. Full guarantee.

# Bone Cruncher

*All good clean fun in this month's star release – but only if you can master the art of making soap!*

***By Tony Hetherington***

Bone Cruncher is a soap opera with a difference as the star of the show is a dragon called Bono who makes a nice little earner by collecting skeletons to make soap that he then sells to the monsters bathing in his castle's moat.

Your job as Bono is to keep your customers happy by generating a constant supply of soap. You can get limited help from your business partner Fozzy whose the equivalent of a heavy, but since he's not too bright you're on your own most of the time.

The headquarters of the "Bono Bathing Company" is your dark, dank and dingey castle and the game is set in a series of increasingly difficult chambers. There are 22 chambers to be solved and if you manage to complete them all you will win a portable stereo! That's how confident Superior Software are that you'll fail!

Each chamber is a maze of walled off rooms that are filled with earth which our hero can dig through. There are also doors that can block the way until the key is found and then used properly! Skeletons have to be collected, as do cauldrons which turn them into soap; staricases that lead up to the bathing monsters and deadly monsters, spiders and glooks tht populate the caverns and can kill you with a single touch and trapdoors that lead to oblivion!

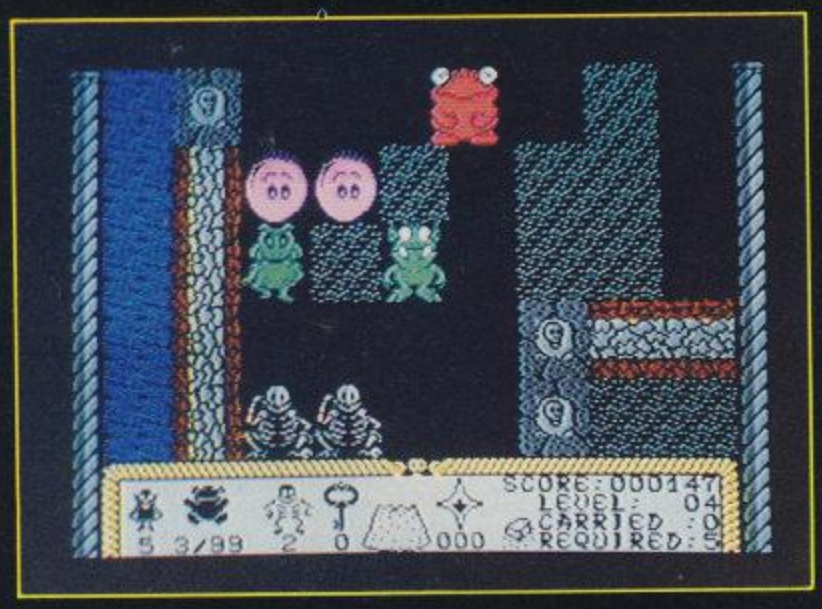

To complete a cavern you must concoct the required

number of soaps by taking skeletons to cauldrons and then delivering them to the staircases. However, blocking your way stands a mind-mangling array of puzzles with the monsters featuring at the top of the list.

Monsters are killed whenever they are trapped and turn into incredibly convenient skeletons that can be added to your store to make more soap. That may sound simple but juggling the joystick movements required to trap a monster is far from easy and involves strategy, tactics, a lot of trial and error and glooks!

Glooks are round purple blobs, with two sullen eyes and a bad spiky haircut that spend most of the game being pushed around (by you) when they frown in disgust. Glooks don't move very much but they do float towards the smell of

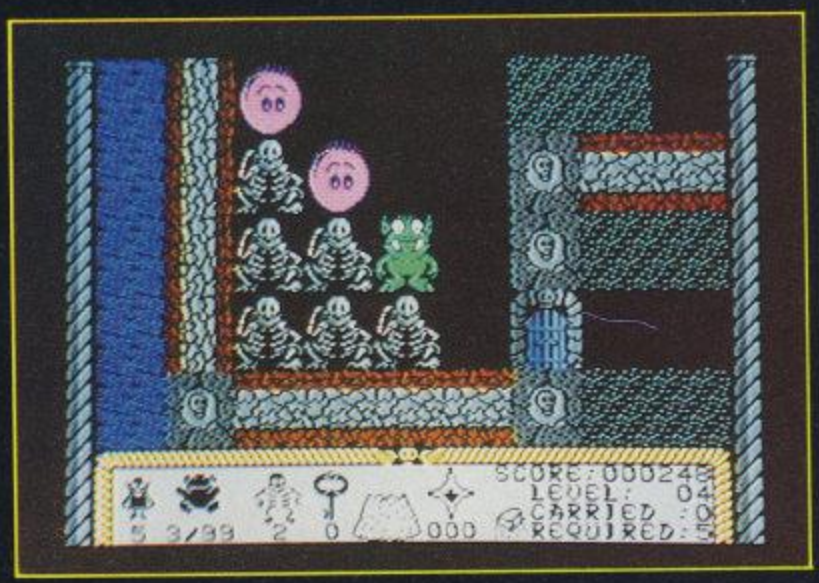

bathing monsters, and since this is determined by the direction of the last staircase you delivered soap to, you have limited, but important, control over the game's glooks. By pushing glooks and anticipating the direction they will move as you deliver soap to staircases you can trap monster's open entrances to new parts of the cavern but can also trap yourself and Fozzy. If you trap yourself then your only way out is to sacrifice one of your five lives to restart from the last soap delivery, if Fozzy is trapped then his energy plummets and he loses one of his three lives. Fozzy may not be important in the early levels but later in the game is immunity to monsters and his ability to grab them is invaluable as it either allows you to push a glook onto a collared monster to trap and kill or simply to get past alive.

Spiders are a little trickier as although Fozzy is invulnerable to their touch he can't grab them, neither can they be killed and to make things worse, a spider will eat any skeletons it can which could cost you the game. No skeletons, no soap I'm afraid. Luckily, if you keep your mind in gear you shouldn't run into too many troubles since spiders always cling to the left hand wall and so you can predict their moves and even get them going around in circles.

The early levels are relatively simple and if you look before you leap you should be able to collect all the skeletons you need to keep the bathing monsters in soap. However, the game suddenly throws you in the deep end. There just aren't enough skeletons so you have to set about making some out of dead monsters.

However to move the glooks to kill the monster also blocks crucial passageways trapping either you or Fozzy and the few skeletons that are there are either buried in a solid block of glooks in a locked room or you have to run the

gauntlet of spiders to reach them. To make things worse you KNOW there must be a solution! Then, just when you're so annoyed that the C64's about to fly across the room you try one more plan, ludicrous it may sound, it might just work. It doesn't, but you're hooked again.

A few hours, days or weeks later you'll finally solve it and the whole process starts again. At the end of each level the game gives you a password that you can type in as a shortcut through the levels you've already completed. However, you may find it useful to practise these conquered levels occasionally as to win the personal stereo you have to complete all 22 caverns in a single game!

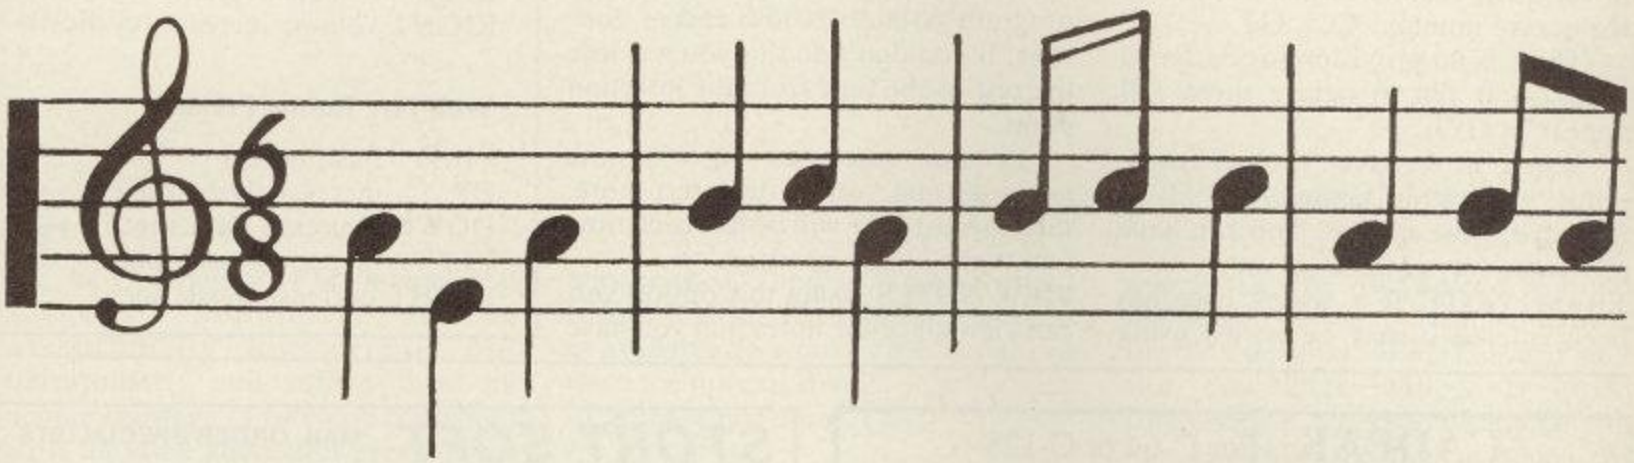

Bone Cruncher will be compared to Superior's own Repton series and other Boulder Dash style games. Although it is set in a series of caverns in which the hero digs out dirt to collect skeletons or diamonds other game elements such as Fozzy, the glooks and the way you must turn monsters into skeletons creates a game that is out on its own. Add functional but funny graphics (such as the Glooks grimace when you shove them or Bono scratching himself while he's waiting for you to work out your next move), a catchy tune and digital speech introduction and you have a game that you must not miss.

# Music While You Load

*Loading from tape can be boring. Add a little music and a few effects with Musiload*

***By P. A. Croton***

Musiload is an interactive program designed to relieve the boredom of loading from tape. It not only plays a tune of your own making but also has special joystick controlled features which operate while the program is loading.

The program can be used as an independent loader or as part of a loading chain; using a short program to load and initialise Musiload and then to load the program you actually want to use. While your program loads you can sit back and alter the speed and volume of the music or control the rate at which the border flashes. Almost without realising it your program will have loaded.

## Keying In The Program

If you have a copy of the *Your Commodore* HypaBasic program you will be able to enter Assembler Musiload without any alterations. If you haven't got this excellent assembler then you will have to resort to a second method.

Type in Assembler Musiload but omit lines 2, 10, 15 and all lines from 20 to 999 inclusive. When you have finished, Musiload D/S must be typed in while the modified Assembler Musiload is still in memory. In this way, the two programs will be merged into one which can then be saved.

The machine code saver built into the program saves the full Musiload code. Line 8120 defines the name under which this code will be saved as N$="MUSILOAD" but you may change it to suit your needs as long as the new filename is only eight characters in length.

## How to use Musiload

When you run Musiload you will have to wait for the code to be read into memory. Ater this pause, you'll have the choice of either accepting the preset tune or of writing your own using the Music Editor.

Whatever your choice, you will eventually be asked if you want to save the tune or go straight ahead and load your program. If you choose the latter option don't forget that your tune will probably be lost once the program has loaded! If you write your own tune always save it first.

Saving, stores the block of memory which contains the working copy of Musiload plus its tune, and this can be found between 49152 and 53247 ($C000-$CFFF).

When you load the Musiload code back into the computer, it can be set into operation with SYS49152. This starts up the musical interrupt routines and then hands back to the normal C64 mode but with the music playing and the border flashing. Now you type in the usual LOAD command and your program will start to load.

While this is happening you can refer to Table 1 to see the range of controls that your joystick will give you.

To add a more professional effect to your loading you could save the following short loader to load a Basic program:

```
10 PROG=PROG+1
20 IF PROG=1 THEN LOAD
"musiload",1,1
30 POKE 631,147: POKE 632,82
POKE 633,85: POKE 634,78: POKE
```

635,13: POKE 198,5
40 IF PROG=2 THEN SYS49152: LOAD "filename",1,1

The program filenames can be changed to suit your needs.

Nomatter which program loading method is chosen, you should either type SYS49800 before running your program or make sure that it appears as the first line or else the Musiload may create strange effects on any sound routines that you use.

## Using the Music Editor

The Music Editor has six options:
**ENTER NOTE** This allows you to input for each of the three voices of the SID chip in turn. The notes are written in the form of note value followed by the octave number: C£5, G2

There is no provision for flattened notes so B flat in octave three will appear as G£3.

When you have entered three notes, a duration common to all of them has to be entered. This can have any value from 1-255.

**ERASE NOTE** If a wrong note has been entered it may be erased using this facility. Enter the note of the section to be erased and it is removed while all of the other notes are pulled back to fill up the gap.

**INSERT NOTE** Write down the last note number of your tune. Then decide which notes the insertion will fall between and type in the lower of the two note numbers. This will open up a space in memory for the new notes and places you into the Enter Note option. Type in the new values and you will return to the menu.

The following step must *always* be followed when an insertion has been made whether you've finished the rest of the tune or not. Re-enter the Enter Note option, add two to the value you wrote down at the beginning of this option and type it in. This will reset the program pointers to the end of your tune. If you don't do this you will lose the rest of the tune from the insertion point.

If your tune uses all 460 note positions and you try to insert more, then the last note will be lost each time you make a new insertion.

**VIEW NOTES** Using this option you can view all of the notes that you have entered from any specified note number. NU means that no not has been entered into that position.

**PLAY NOTES** Does just that!

**FINISHED** Brings you back to the SAVE option.

Musiload does not disturb any of the registers and only uses zero page locations 251 to 254 ($FB-$FE).

Use it to make your programs appear more professional and turn loading time into a pleasure rather than a chore.

**Table 1**

**Without Fire Button Pressed**

| | |
|---|---|
| UP | autoflash on |
| DOWN | autoflash off |
| LEFT | volume decrease (cyclical) |
| RIGHT | volume increase (cyclical) |

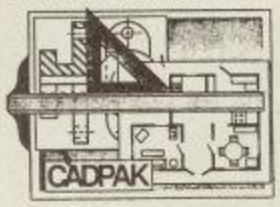

**With Fire Button Pressed**

# CADPAK For C-64 or C-128

CADPAK is a superb tool for computer aided design and drawing. Using either the keyboard or optional lightpen you draw directly on the screen to create and edit pictures, drawings, layouts and renderings—quickly, accurately, creatively. The new *dimensioning* feature allows exact scaled output on your designs. Choose from the menu options and draw on the screen at an exact location using our *AccuPoint* cursor positioning. Using the two graphics screens, you can draw LINE's, BOXes, CIRCLEs, ELLIPSESs; fill with solid colors or patterns; freehand DRAW; COPY sections of the screen; ZOOM-in to do detailed design on a small section of the screen. With CADPAK's improved object editor, you can define and save furniture, electronic circuitry or machinery as intricate as the screen resolution permits. Hard copy to most dot matrix printers. Perfect for all your design needs.

For C-64 **£24.95** For C-128 **£34.95**

Cadpak-64 + Mouse **£49.95**
Cadpak-128 + Mouse **£59.95**
Upgrade Disk **£5.00**
Upgrade Disk + Mouse **£29.95**
*(Return Original Disk)*

LIGHTPEN (standard version) **£12.95**
(1901 or green screen monitor) **£14.95**
Commodore 1351 Mouse **£29.95**

The C64 version works at 320x200 resolution with hardcopy to most printers in single or double size. The C128 version works at 640x360 resolution, though an 80 column monitor is not required. Hardcopy various sizes.

**NEW** - Both CADPAK packages now include versions to work with the Commodore 1351 mouse (no other mouse is suitable).

## EDUCATIONAL SOFTWARE

**CONCEPT OF STATISTICS** - A multi-part programe covering the theory of statistics with supportive graphics, equations and calculations. This program covers a broad spectrum suiable for students and practical users of statistical analysis in science, engineering, management and related fields. **£14.95 on disk.**

**SHAPING UP WITH NUMBERS:** A program suitable for young children - graphics, number handling and shape recognition. **£495 on tape or disk.**

**HIGHER MATHEMATICS:** A 7 part, menu driven package covering the complete syllabus for the G.C.S.E. examination. Understanding your algebra, geometry, trigonometry, linear programming, statistics and more. Interactive problem solving exercises and a complete examination paper are included. **Available on disk only at £12.95**

**VIDEOBASIC-64:** All of the above programs were written with the aid of the Videobasic Development Package, the most advanced BASIC extension available for those C64 owners who are fed up of having to use those difficult ro remember PEEKS & POKES in order to use the powerful inbuilt graphics and sound capabilities which are ignored by BASIC 2.0. High resolution and multicolour graphics, turtle graphics, sprite handling, sound, memory manipulation, game features and much more are supported by the easy to use commands. A runtime version is provided so that you can sell or give away your programss to other C64 owners. Some VIDEOBASIC routines are incorporated into our CADPAK-64, CHARTPAK-64 and TAS-64 packages. In particular, they share the same screen memory and hardcopy routines, which means that VIDEOBASIC can read in screens produced by any of these programs. **Price: £24.95 on disk only**

**SPECIAL OFFER:** £5 off VIDEOBASIC if purchased with any of above educational packages. £10 off VIDEOBASIC if purchased with any other ABACUS SOFTWARE product as listed below.

| | | | |
|---|---|---|---|
| CADPAK-64 | £24.95 | CADPAK-128 | £34.95 |

# Plus/4 Assembler

*Serious software for Plus/4 users is sadly lacking serious software. We come to the rescue with a superb assembler*

***By Steve Carrie***

The Commodore Plus/4 enjoyed a surge of popularity due to exceptionally low pricing but unfortunately still suffers from an acuate shortage of software compared with its more successful predecessor, the Commodore 64. This is certainly true in the area of utilities, although to be fair, the Plus/4 does come equipped with a pretty good, although basic machine language monitor (MLM).

The program I have written is a two-pass symbolic assembler which is disk-based, i.e. it reads its source code from a disk file and writes the assembled code to another disk file. The source file is assumed to have an MSDOS-type file extension .ASM. The rununit (assembled code) has the extension .EXE. For example, when the program runs, it asks the user for a filename. If you enter PROG1 and press return, the program will assume that the source file is called PROG1.ASM and will produce a rununit with the name PROG1.EXE.

The load address of the rununit is the address given in the assembler directive ORG (code origin). You should therefore ensure that the correct address is given here. The code address defaults to $0000 in the absence of the ORG directive. When assembled, the rununit is loaded by either the MLM 1 command or be a BASIC LOAD with a secondary address of 1.

Given the disk-based nature of the assembler, fairly large source code files may be used. The Plus/4 allows about 60K of BASIC. Thus the same amount is available to source code programs since the normal BASIC editor is used to prepare programs.

## Getting it all in

The program is presented as a BASIC loader with lots (!) of DATA statements. Each line is checked against the checksum value but it's still a good idea to make use of the *Your Commodore* loader program. Should a problem occur, the line where the fault was detected will be printed. Before typing in the program, you will have to move the start of BASIC upwards in memory by 4K. Type in the following direct command:

```
POKE 8192,0:POKE 43,1:POKE 44,32:NEW
```

This moves BASIC up to 8192 in memory. If you are typing in the program in stages, you must remember to type this in every time before you start.

When the program has been typed in, SAVE it first then RUN it. If all is well, the program will be built in memory and SAVED to disk.

Reset the machine then load the new program. The assembler has been designed to LOAD and RUN like a BASIC program at the normal BASIC start address ($1001) and will return to BASIC when assembly stops. You are asked for the filename which, as mentioned before, is assumed to have the file extension .ASM. During Pass 1 the assembler will only print something if an error occurs. If this happens then the line in which the error occurred is printed along with an error message.

During Pass 2, a full listing is output to the screen. Any error is shown AFTER the line in which it occurred and assembly stops.

Editing your program could not be simpler. You simply use the Commodore BASIC editor with line numbers as you would for a BASIC program. However, there is a catch... (things would never be the same without a problem or two...!). Normally, the Commodore line editor tries to tokenise anything in the input line which looks like a BASIC reserved word. As certain assembly mnemonics contain character sequences which resemble BASIC commands, we have to prevent this happening. The program "EDIT" is a small BASIC loader with a machine-code program in DATA statements. When it is loaded and RUN, it causes a bypass of the tokenisation routine for program lines only. This means that direct commands such as DLOAD, DSAVE, RENUMBER, etc. will still work OK but *DON'T TRY TO LIST OR EDIT A BASIC PROGRAM WITH EDIT INSTALLED OTHERWISE YOU'LL GET SOME REALLY WEIRD RESULTS!!!!!!*

### Assembler Directives and Formats

There are six assembler directives:

**BYT** Assemble bytes to memory. This directive also allows text to be entered. Typical examples are:

```
10 byt $93,'Hello CBM',$0d,$00
20 byt 23,24,$19,$1a
```

**WOR** Assembles 2-byte words to memory. Bytes are arranged in lo-byte, hi-byte order.

```
10 wor $0071,32768,vectorl
20 vectorl wor $3000
```

This example also shows how symbols may be inserted into WOR and BYT directives.

**EQZ** The eqz directive allows you to associate a symbol with a zero page memory location. When referred to later, this symbol will assemble in zero page addressing mode.

```
20 pointerl eqz $14
```

**EQA** The equ directive allows you to associate a symbol with an absolute memory location. When referred to later, this symbol will assemble in absolute addressing mode.

```
40 .irqvector eqa $0314
50 .nmivector eqa irqvector+2
```

**RES** The RES directive allows an area of memory to be set aside for a table of some such thing. It simply adds the amount specified to the assembly program counter.

```
100 .table
110 res 100
120 ;
```

**ORG** This directive sets the code origin in memory. Because the disk system uses this to set the program load address, it is advisable to use this as the first line of any program.

```
10 org $6000
```

You may insert comments into a source program using the semi-colon. As you may have noticed above, symbols are declared using a full stop. When referred to later, only the name need be given.

### Assembly Language Formats

Immediate operands are assumed to be preceeded by the hash (#). Hexadecimal numbers may be prefixed with either the dollar or ampersand ($,&). Ascii characters may be inserted into something like LDA # 'A'. This will load the ascii code value of the letter A. Decimal numbers have no prefix thus LDA # 30 will assemble to load the accumulator with 30.

As mentioned above, symbols must be declared using a full-stop, for example:

```
10 org $7000
20 .lomen=$1001
30 .himen=$fe00
40 ;
50 lda # < lomem
60 ldx # < lomem
70 sta himem
80 stx himem+1
90 rts
```

In this example, you see that the symbols and may be used to load the lo-order or hi-order byte of an operand respectively. Also you may add or subtract values as in line 80. Note that in a line such as LDA # < memory+, the "memory+1" is evaluated BEFORE the operator takes effect.

(A Commodore 64 version will appear in a subsequent issue.) YC

*See listings on page 102*

| LIFESAVERS 7 | C64 | SPRITES IN BORDER | 1/1 |
|---|---|---|---|

There are many games today which include sprites in the border to display scores etc.

The routine presented here will allow you to do just that.

The program sets up an IRQ to check when the screen raster line is at 249. When it has reached this, bit 3 of memory location 53265 is cleared so that 24 row mode is possible. This has the effect of making the bottom border disappear.

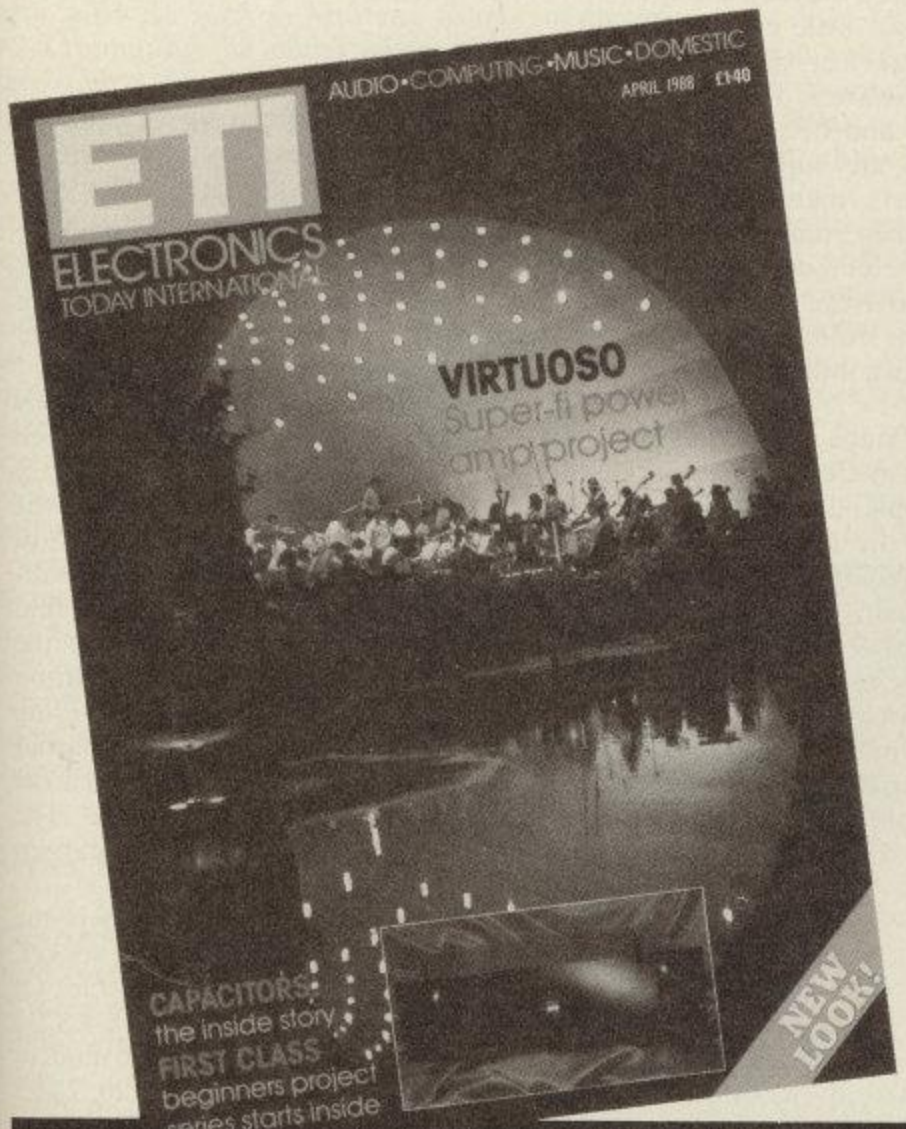

The raster will continue to the top so that th top border will also disappear.

When the raster has reached 0, bit 3 of location 53265 is set to 1. This sets up 25 row mode and the screen is displayed as normal.

POKEing various values into memory location 16383 allows you to create some weird effects.

# The Choice of Modem

*There are a number of factors to be taken into consideration when entering the world of communications. Here we look at two modems at opposite ends of the price scale*

***By David Janda***

The modems we will be looking at are the Kirk Enterprise 1 and the Pace Series Four 1200S. Before describing each modem in turn, it's worth pointing out the hardware/software that is used with these modems, as neither one was specifically designed for use with the Commodore 64/128.

Kirk recommended the Mustang 64 Communications Cartridge (V2.1) from Y2 Computing for use with the Enterprise 1 modem. This item plugs into the cartridge port and offers viewdata and scrolling terminal facilities. However, because the Enterprise 1 is equipped with a female 25 way D-type RS232 connector, it is not essential that the modem be used with the Y2 software.

Indeed, to test the 1200 baud half-duplex capability of the Enterprise 1, I interfaced the modem to the 64 via an RS232 interface which plugs into the user port of the 64/128. The software used with the interface was HomeTerm which is part of the HomePack integrated suite of software from Ariolasoft.

Basically the same applies with the Series Four. It too is equipped with a female RS232 connector, and can be used with the Y2 cartridge, or connected to the 64/128 via an RS232 interface. For the purpose of this review, the Series Four 1200S was tested with both the Y2 software, as well as HomeTerm.

## Commodore Connection

This choice of connecting a modem to the 64/128 is a little confusing, and deserves further explanation. Cartridge software is very popular in this country, and because the major control lines are supported on the cartridge port, manufactures have opted to put their comms software and interfacing electronics into one package – a cartridge. The Y2 Mustang software is one example, however, the cartridge in turn must be connected to a modem.

The next stage from this is to incorporate a modem into the package as well; examples are the Commodore modem and the Multi-modem from Miracle Technology.

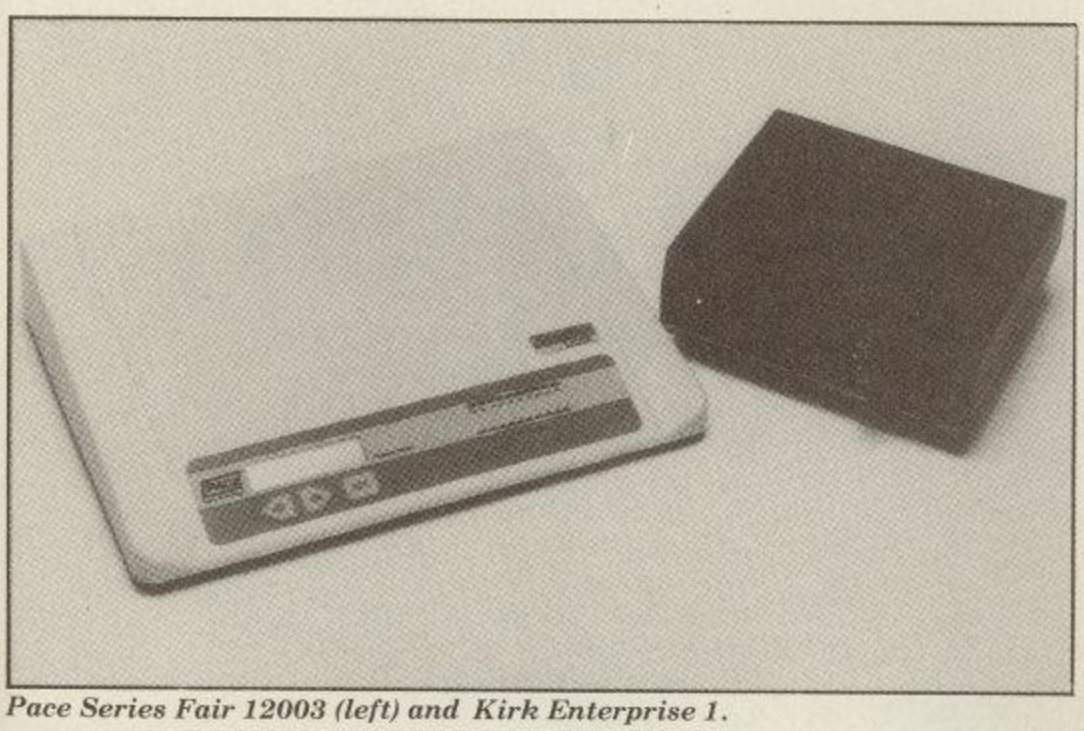

The alternative is to connect the modem to the 64/128 via the user port. To do this the user must purchase an RS232 interface (which costs as little as £30). Terminal software will be required to 'drive' the RS232 interface, but this should not be a problem as there are dozens of terminal programs in the public domain. One example is *Your Commodore's* very own Telecom 64, which was listed in the April 1986 issue. Connecting a modem via this method has the advantage that the RS232 interface can be used to drive devices other than a modem a printer or plotter for example. The main disadvantage is that there is no viewdata software (that I know of) which operates through the user port.

## Enterprise 1

Probably the best way to describe the Enterprise 1 is to say that it's a Voyager 7 with bits added on. The appearance and functionality are almost identical, and perhaps this is not so surprising as both the Enterprise 1 and the Voyager 7 were manufactured by Kirk automation.

Appearance wise, the Enterpise 1 is housed in a black casing with green lettering on the front panel. A rotary switch on the right is used to select the required baud rate which can be one of 300/300 org/ans, 1200/1200 half-duplex, 1200/75, 75/1200 baud and test. A feature which is not on the Voyager 7 is the one/off line button which is used when dialing/answering manually. An interesting oddity is that pushing the button in will switch the modem offline and out online. The other way round would have been more logical in my opinion.

At the rear of the modem is the RS232 socket (female), phone socket, telephone lead and power cable. Of particular interest is the 21 pin RS232 connector. Looking inside the modem reveals that pins 1-6, 15, 17, 20, 22-23 and 25 are in use. Basically this means that connecting the Enterprise to your

*Pace Series Fair 12003 (left) and Kirk Enterprise 1.*

Commodore should be no problem as a variety of options are available. The phone socket is recessed and allows a telephone to be used in-line with the modem which saves you the expense of buying a splitter.

Using the Enterprise 1 proved to be simplicity itself, even though the manual is quite grotty. When used with software such as Mustang from Y2 Computing the auto-dial feature can be used. The Enterprise series uses boring old relay technology to auto-dial, which is quite loud in operation and not the most reliable method of getting a telephone to dial, but what can you expect for the price?

One aspect of the operation of Enterprise 1 that particularly annoyed me was the so-called auto-answer facility which, more often than not, did not work. I have had this problem with several Voyager 7's, and I can only conclude that the problem is inherent in the design of the modem.

Having said this, all other aspects of the modems operation were fine, and I would conclude that if you are looking for a cheap (but mostly reliable) modem with dual speed operation, it would be a good idea to shop around for an Enterprise 1.

## Series Four Range

The Series Four range of modems from Pace Micro Technology consists of three models, and I looked at the 1200S, which is in the 'middle' of the range.

What you get for the price (and the price is quite a lot) is sophistication with simplicity. Let me explain. The Series Four is one of the new breed of intelligent modems. That is, a lot of the work that is normally done by the micro/RS232 interface/software is done by the modem itself. The modem has its own control program and central processing unit and is in effect a computer in its own right. Operation of the modem is done by sending it commands from the terminal software. These commands were developed by the Hayes company and are widely used throughout the industry.

The 1200S model reviewed can operate at 300/300, 1200/75, 75/1200 and 1200/1200 full-duplex. It features auto-dial, auto-answer, auto-baud rate detection/selection. Also included is a battery backed clock/calandar and the facility to store up to 64 phone numbers in its internal 'note@ad' memory which is battery packed. The 1200S also features a full RS232 port with inline phone socket as well as a Centronics printer port and 20 segment led display with line strength indicator and speed buffering.

The modem itself is quite flat but takes up a large footprint on our work surface. The front panel consists of an LCD display with two touch-sensitive buttons (that are used to manually select options) and the line status/line strength LEDs. At the rear of the modem is the power supply socket for the PSU which is a separate unit, the inline phone socket, the Centronics port and the only button on the whole machine; the reset switch.

Interfacing the 1200S to your Commodore is also very easy. However, because the modem is intelligent, it can be used with practically any comms software you care to name.

## Simple Operation

Once connected to your micro the 1200S is easy to operate. Due to the way the modem is wired up to the micro the comms software (such as Mustang) will think that the modem is online and go into terminal mode after a few seconds. The reason for this is that the commands to operate the modem are entered from your keyboard while *in* terminal mode. To understand this better consider the following example: using the Mustang cartridge connected to the Series Four I would like to contact Telecom Gold at 1200 baud full-duplex. I would select the terminal mode and to online by pressing return (even though I was not online). At this stage I would be greeted with a blank screen, but by entering 'AT?' followed by RETURN the Series Four help

**Table 1** – ENTERPRISE 1 RS232 PIN OUTS

| Pin No. | Function | Circuits |
|---|---|---|
| 1 | - | Data Ground |
| 2 | BA | Transmit Data |
| 3 | BB | Receive Data |
| 4 | CA | RTS |
| 5 | CB | CTS |
| 6 | CC | DSR |
| 15 | DB | Transmit Baud Clock |
| 17 | DD | Receive Baud Clock |
| 20 | CD | DTR |
| 22 | CE | Ring Detect |
| 23 | - | Data Direction |
| 25 | - | Charger |

screen would be displayed (Table 2). To enter Telecom Gold at 1200 full-duplex I would simply enter the following:

ATD 583 1200

The rest would be automatic with the modem dialing, detecting the answer, selecting the appropriate baud rate and so on. Even if my terminal software can only operate at 300/300 baud it is still possible to use services that operate at 1200 baud full-duplex because the Series Four has an internal memory buffer that keeps things in order. The final result is that the modem is very easy to use, and yet extremely powerful. Without a doubt, the Series Four is the Rolls-Royce among modems.

POOLSWINNER II
THE ULTIMATE POOLS PREDICTION PROGRAM

*Boxed, with detailed instruction booklet*

- **MASSIVE DATABASE** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available – 22000 matches over 10 years.
- **PREDICTS** Not just SCOREDRAWS, but AWAYS, HOMES and NO SCORES.
- **SUCCESSFUL** SELEC guarantee that Poolswinner performs significantly better than chance.
- **ADAPTABLE** Probabilities are given on every fixture – choose as many selections as you need for your bet. The precise prediction formula can be set by the user – you can develop and test your own unique method.
- **SIMPLE DATA ENTRY** All team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below).
- **LEAGUE AND NON-LEAGUE** All English and Scottish League teams are supported, and also the non-league sides often used on pools coupons.
- **PRINTER SUPPORT** Full hard copy printout of data if you have a printer.

**PRICE £15.00 (all inclusive)**

NOW AVAILABLE

**FIXGEN 87/8** AT LAST: No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish League fixtures for 1987/8. Simply type in the date, and the full fixture list is generated in seconds. Fully compatible with Poolswinner. Yearly updates available.
**POOLSWINNER with FIXGEN £16.50 (for both)**

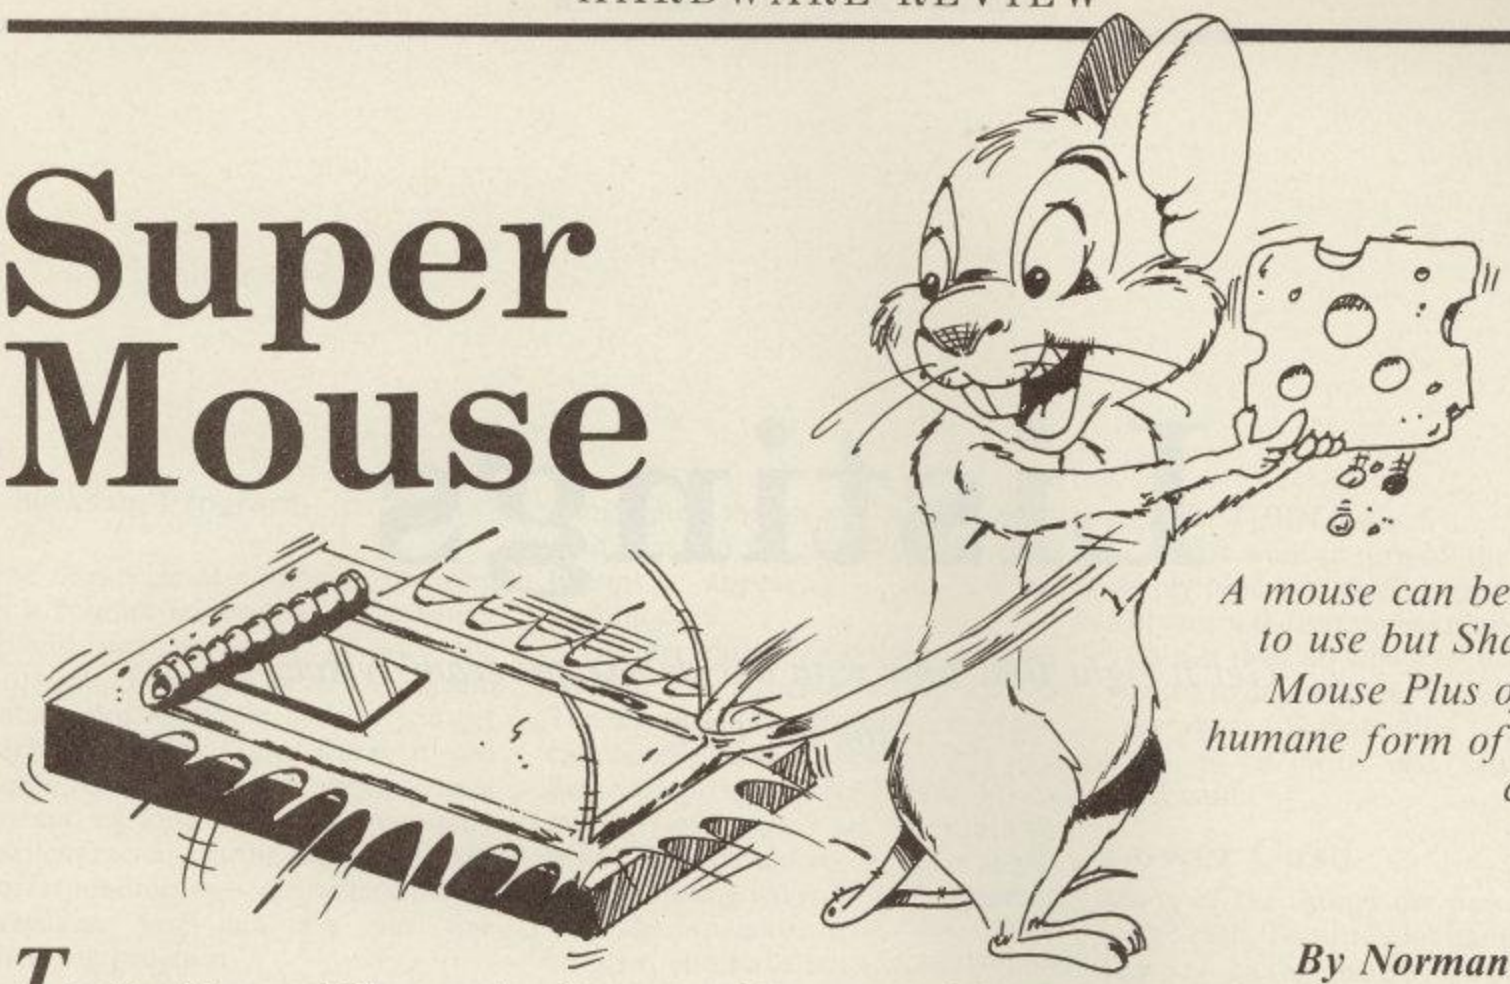

**COURSEWINNER V3**
**THE PUNTERS COMPUTER PROGRAM**
**NOT JUST A TIPSTER PROGRAM,** Coursewinner V3 can be used by experts and occasional punters alike. You can develop and test your own unique winning system by adjusting the analysis formula, or use the program in simple mode. Coursewinner V3 uses statistical analysis of major factors including past form, speed ratings, course statistics, prize money, weight, going, trainer and jockey form etc, etc. It outputs most likely winners, good long odds bets, forecasts, tricasts etc. The database includes vital course statistics for all British courses. You can update the database – never goes out of date. *FULL PRINTER SUPPORT.*
**PRICE £15.00 (all inclusive) includes Flat AND National Hunt versions.**

ALL PROGRAMS AVAILABLE FOR: AMSTRAD CPCs, AMSTRAD PCWs, PC1512, All BBCs, All SPECTRUMS, COMMODORE 64/128.
Supplied on tape (automatic conversion to disc) – except PCW and PC1512 (on disc – add £3.00).

# Super Mouse

*A mouse can be a pest to use but Shazaan's Mouse Plus offers a humane form of rodent control*

***By Norman Doyle***

The Neos Mouse and Cheese package forms part of the bait to lure prospective buyers into acquiring the Commodore 64C package. As with any mousetrap there is a catch – once the mouse is plugged in, the keyboard responds in a most peculiar way. In the real world mice are rarely noticed and it would be good if their electronic counterparts acted in a similar way.

With the Mouse Plus, Shazaan Systems offers a means of fulfilling this dream by providing a connector and associated software which allows the mouse to be attached to the user port instead of the joystick port. Connected in this way the software can then set up the necessary interrupts to allow the keyboard and mouse to be used in unison.

## What's on the Disk

The disk provided with the adaptor/connector contains five programs which adequately demonstrate the power of the module. The first program offers an Amiga style set of pull-down menus, two of the others demonstrate the use of the mouse and a fourth is a program which can be incorporated in the user's own software.

The final program on the disk is a Cheese modifier which unfortunately only appears to work in conjunction with the disk version of the original program. The 64C package incorporates the cassette version of this mouse-driven drawing program. After transferring the cassette version to disk, I attempted to incorporate the modifier but found it to be a fruitless experiment. The Newcheese program generated would not operate at all so I would like to see a cassette modifier included in future.

To return to the Amiga-style menu program, the master menu names are displayed across the top line of the display screen. By clicking onto one of these headings various useful utility programs can be called from the revealed pull-down menus.

Disk commands such as errors and directory display, scratch, rename, initialise, validate, load (machine code or Basic) and save can be selected without the need to resort to the usual complex Basic commands. Clicking onto an option often results in an action window opening at the centre of the screen so that specific program details can be entered. When the operation has been completed, the original screen is restored.

The printer options gives a screen dump, Basic program printout and reset options. Utilities allows the recovery of a 'newed' program and the appending or merging of two programs. Border, screen, cursor or mouse pointer colours can be changed via the special menus option and the final menu simply displays the version date of the menu program in use.

The instructions give full details on how this rudimentary selection of utilities can be expanded with your own programs. This means that if a renumber utility is considered essential to your programming needs you can patch it into the menu system and then save the whole new program to disk.

## Colour Change

One of the first utilities that I would like to add to this system is an option to change the colour of the menu tabs. These are displayed in dark blue so, if this is also your favoured background colour, the menu becomes invisible until you move the pointer onto one of the options.

The two mouse programs, Mouse1 and its associated demo, graphically display the way in which the system can be used to great effect in your own software and there is a separate program, Mouse2, which has been created for your own use.

The Mouse Plus package certainly offers vastly improved and much needed control systems for the Neos Mouse and turns a novelty into a practical device which will enhance your software. Such value does not come cheaply but for £19.95 you not only get the disk and the connector but also the freedom to leave your mouse permanently connected and ready for use with suitable software.

# Listings

*Get it right first time with our deluxe program system for the C64.*

You may have noticed that our listings are free of those horrible little black blobs which send you searching around the keyboard for a suitable graphic symbol. You may also have noticed the funny numbers by the side of each line of the listing. Fret no more, it's all part of our easy entry aid.

Instead of those nasty graphics and rows of countless spaces in PRINT statements and strings we use a special coding system. The code, or mnemonic, is always contained in square brackets and you'll soon learn to decipher their meanings.

For example, [SA] would mean type in a Shifted A, or an ace of spades in layman's terms, and [SA10] would mean a row of ten of these symbols.

[S+2] means hold down the shift key and press the plus key twice. It doesn't take a great leap of logic to realise that [C+2] means exactly the same thing except that the Commodore key (bottom left of the keyboard) is held down instead of the shift key.

If more than two spaces appear in a statement then this will be printed as [SPC4] or, exceptionally, [SSPC4]. Translated into English this means press the spacebar four times or in the latter case hold the shift key down while you do it.

A string of special characters could appear as:

[CTRL N, DOWN2,LEFT5,BLUE, F3,C3]

This would be achieved by holding down the CTRL key as you press N, press the cursor key down twice, the cursor left key five times, press the key marked BLUE while holding down the CTRL key, press the F3 key and, finally hold the Commodore key down while pressing the number two key (C2 would of course make the computer print in brown).

Always remember that you should only have a row of graphics characters on your screen with no square brackets and no commas, unless something like this appears:

[SS],[C*]

In this case the two characters should have a comma between them.

On rare occasions [REV T] will appear in a listing. This is a delete symbol and is created by entering the line up to this mnemonic. Then type a closing quotation mark (SHIFT & 2) and delete it. This gets the computer out of quotes mode. Hold down CTRL and press the number nine key (RVSON), type the relevant number of reversed T's and then hold down CTRL and press zero (RVSOFF). Next type another quotation mark and delete it again. Now finish the line and press RETURN.

A list of these special cases is given in the table but remember that only one of these mnemonics will appear outside of a PRINT string: the symbol for pi. This may appear when its value is needed in a calculation so this may look something like:

:CC=2*[PI]*R:

Ignore the square brackets and just type in a shifted upward pointing arrow (ie. the pi symbol).

## Checksum Program

The hexadecimal numbers appearing in a column to the left of the listing should not be typed in with the program. These are merely checksum values and are there to help you get each line right. Don't worry if you don't understand the hexadecimal system, as long as you can compare two characters on the screen with the corresponding two characters in the magazine you can use our line checking program.

Type in the Checksum Program, make sure that you've not made any mistakes and save it to tape or disk immediately because it will be used with most of the present and future listings appearing in Your Commodore.

At the start of each programming session, load Checksum and run it. The screen will turn brown with yellow characters and each time you type in a line and press the RETURN key a number will appear on the screen in white. This should be the same as the corresponding value in the magazine.

If the two values don't relate to one another, you have not copied the line exactly as printed so go back and check each character carefully. When you find the error simply correct it and press RETURN again.

If you want to turn off the checker simply type SYS49152 and the screen will return to the familiar blue colours. You can then do whatever it was you wanted to do and if this doesn't use the area where Checksum lies you can go back to it with the same SYS command.

## Lower Case

Many of the listings are presented in lower case. To turn your computer to lower case mode press the Commodore key and the SHIFT key at the same time. YC

| Mnemonic | Symbol | Keypress |

## Music While You Load

Getting it all in

The program is presented here as a simple Basic loader. Type it in using our SYNTAX CHECKER, see LISTINGS.

When RUN the program will POKE the machine code for MUSILOAD into memory and enter the editor.
You can then generate your own music and save it to tape or disk

NB. Instructions for entering the program have been modified since the text for this item was produced. Ignore the entry instructions in the article.

PROGRAM: MUSILOAD

# ARE YOU A COMMODORE EXPERT?

Your Commodore, the market-leading magazine for serious Commodore users, is looking for a technical assistant.

The job involves helping with the day to day running of the technical aspects of the magazine.

The successful applicant will be expected to help choose software for inclusion in the magazine as well as sort out reader's technical enquiries and write articles.

All applications, which will be treated in confidence, should be sent to:

**Stuart Cooke,Editor,Your Commodore,ASP Ltd,**
**Number One,Golden Square,London W1A 3RB**

Closing date: 20th February 1988

## YOUR COMMODORE

**Lineage: 54p per word.**
**(including VAT)**
**Semi display: £11.73 per single column centimetre (including VAT) minimum 2cm. Ring for information on series bookings/discounts.**

All advertisements in this section must be prepaid.
Advertisements are accepted subject to the terms and conditions printed on the advertisement rate card (available on request).

**01-437 0699**

**Send your requirements to:**
**ALAN COLE**
**ASP LTD, 1 GOLDEN SQUARE,**
**LONDON W1**

## FOR SALE

### NEOS?

YOU NEED THE MOUSE PLUS

*Enables you to use the mouse and keyboards together. Can be left connected all the time - includes a disc containing the mouse menu, Amiga style pull down menus while you programme. Two mouse drivers for your own programmes and D cheese mod. Full manual supplied. Let your C64 use the whole power of the mouse. Does not damage the keyboard.*

**Send £19.95 to:** or phone for more details
**Shazaan Systems**
8 Alm Close, Knap Hill, Woking, Surrey. Tel: 04867 89098

## AMIGA

TRIANGLE TELEVISION
The Amiga Specialists

- FOR ALL YOUR VIDEO AND AUDIO VISUAL REQUIREMENTS
- A500 AND A2000
- FULL RANGE OF PERIPHERALS
- FULL RANGE OF SOFTWARE
- RGB CONVERTERS
- TRAINING COURSES
- COMPUTER GRAPHICS DESIGNED TO ORDER

TRIANGLE TELEVISION
130 Brookwood Rd.,
London SW18 5DD |Tel:01-874 3418

### AMIGA OWNERS

Generous discounts now available on popular software, Blank Discs, Accessories, etc.
Try Software before you buy.
For details send SAE to:-

**THE SOFTWARE CLUB (YC)**
**26 BEECHLEY DRIVE, CARDIFF**
**CF5 3SN**

## TERMS

**CLASSIFIED ADVERTISING TERMS & CONDITIONS**

Our terms for new advertisers (semi-display and lineage) are strictly pro-forma payments until satisfactory reference can be taken up (excluding recognised advertising agencies). Cheques and PO's should be crossed and made payable to:
ARGUS SPECIALIST PUBLICATIONS LTD.,
and send together with the advertisement to:
THE CLASSIFIED DEPT., L/H,
NO: 1 GOLDEN SQUARE, LONDON, W1R 3AB.

There are no reimbursements for cancellations. Advertisements arriving too late for a particular issue will be inserted in the following issue unless accompanied by instructions to the contrary.

All advertising sales are subject to Government regulations concerning VAT. Advertisers are responsible for complying with the various legal requirements in force eg: The Trade Description Act, Sex Discrimination Act & The Business Advertisements (Disclosure) Order 1977.

*FULL TERMS & CONDITIONS OF ADVERTISING AVAILABLE ON REQUEST.*

**PLEASE SEE NEXT PAGE FOR MORE CLASSIFIED ADVERTISMENTS. IF YOU WOULD LIKE TO APPEAR IN THIS SECTION CALL ALAN COLE ON 01-437 0626 FOR DETAILS.**

## OOPS!

Unfortunately an error appeared in the program Lister 128 in the December issue.
The corrections are as follows:
Add the following to the end of lines 420 and 440.
:L=L+1
Apologies for the inconvenience caused.

## Program Submissions

Due to the illness of our software evaluator some people may be experiencing a delay in getting to replies regarding submissions. We are trying to clear the backlog of programs as quickly as we can but this is taking some time. This backlog also effects Bug Finders and Lifesavers.

We apologise for the delay and would ask that you would bear with us while the backlog is cleared.

The publication of lifesavers has also been halted because of this software backlog. We will be bringing you more short programs and tips as soon as we can.

## Commodore Where Are You?

At the *Your Commodore* office we are repeatedly asked for the address and telephone number of Commodore U.K. Many people, after referring to their computer manuals, believe them to be based in Corby.

The Commodore plant at Corby was closed down some time ago. Reproduced here you will find the correct address for Commodore U.K.

We suggest that you write this correct address in the front of your computers manual for future reference.

Commodore Business Machine, (UK),
Commodore House,
The Switchback,
Gardner Road,
Maidenhead,
Berks SL6 7XA.

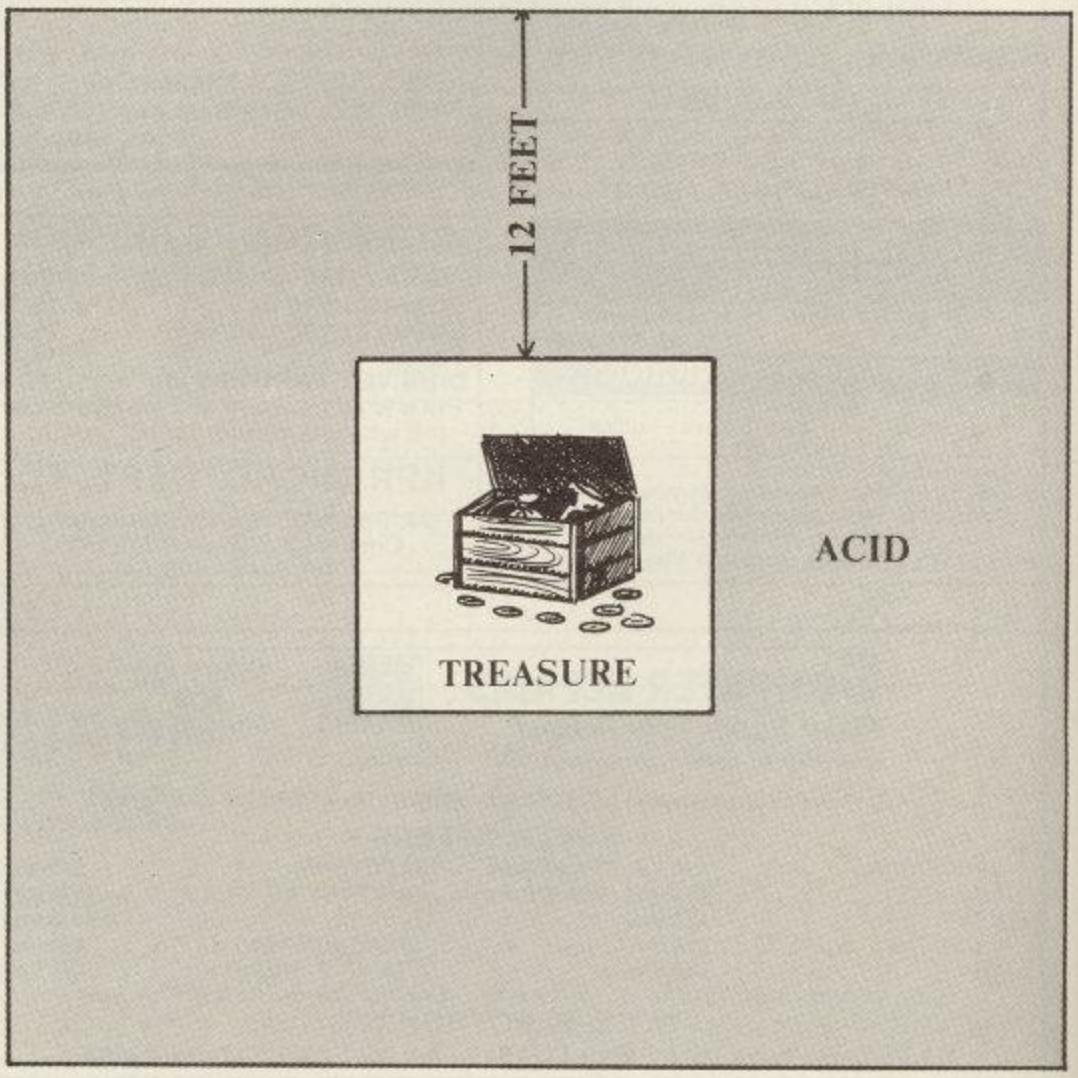

At the *Your Commodore* office we receive hundreds of letters from readers every month. We do try and answer each individually but sometimes this is impossible due to pressure of work. If you have written to us and not received a personal reply, we apologise for this but we cannot promise to reply to every item of mail we receive. If you feel that your question or letter really needs an answer, then inclusion of an s.a.e. will guarantee a reply, although this may still take time to arrive.

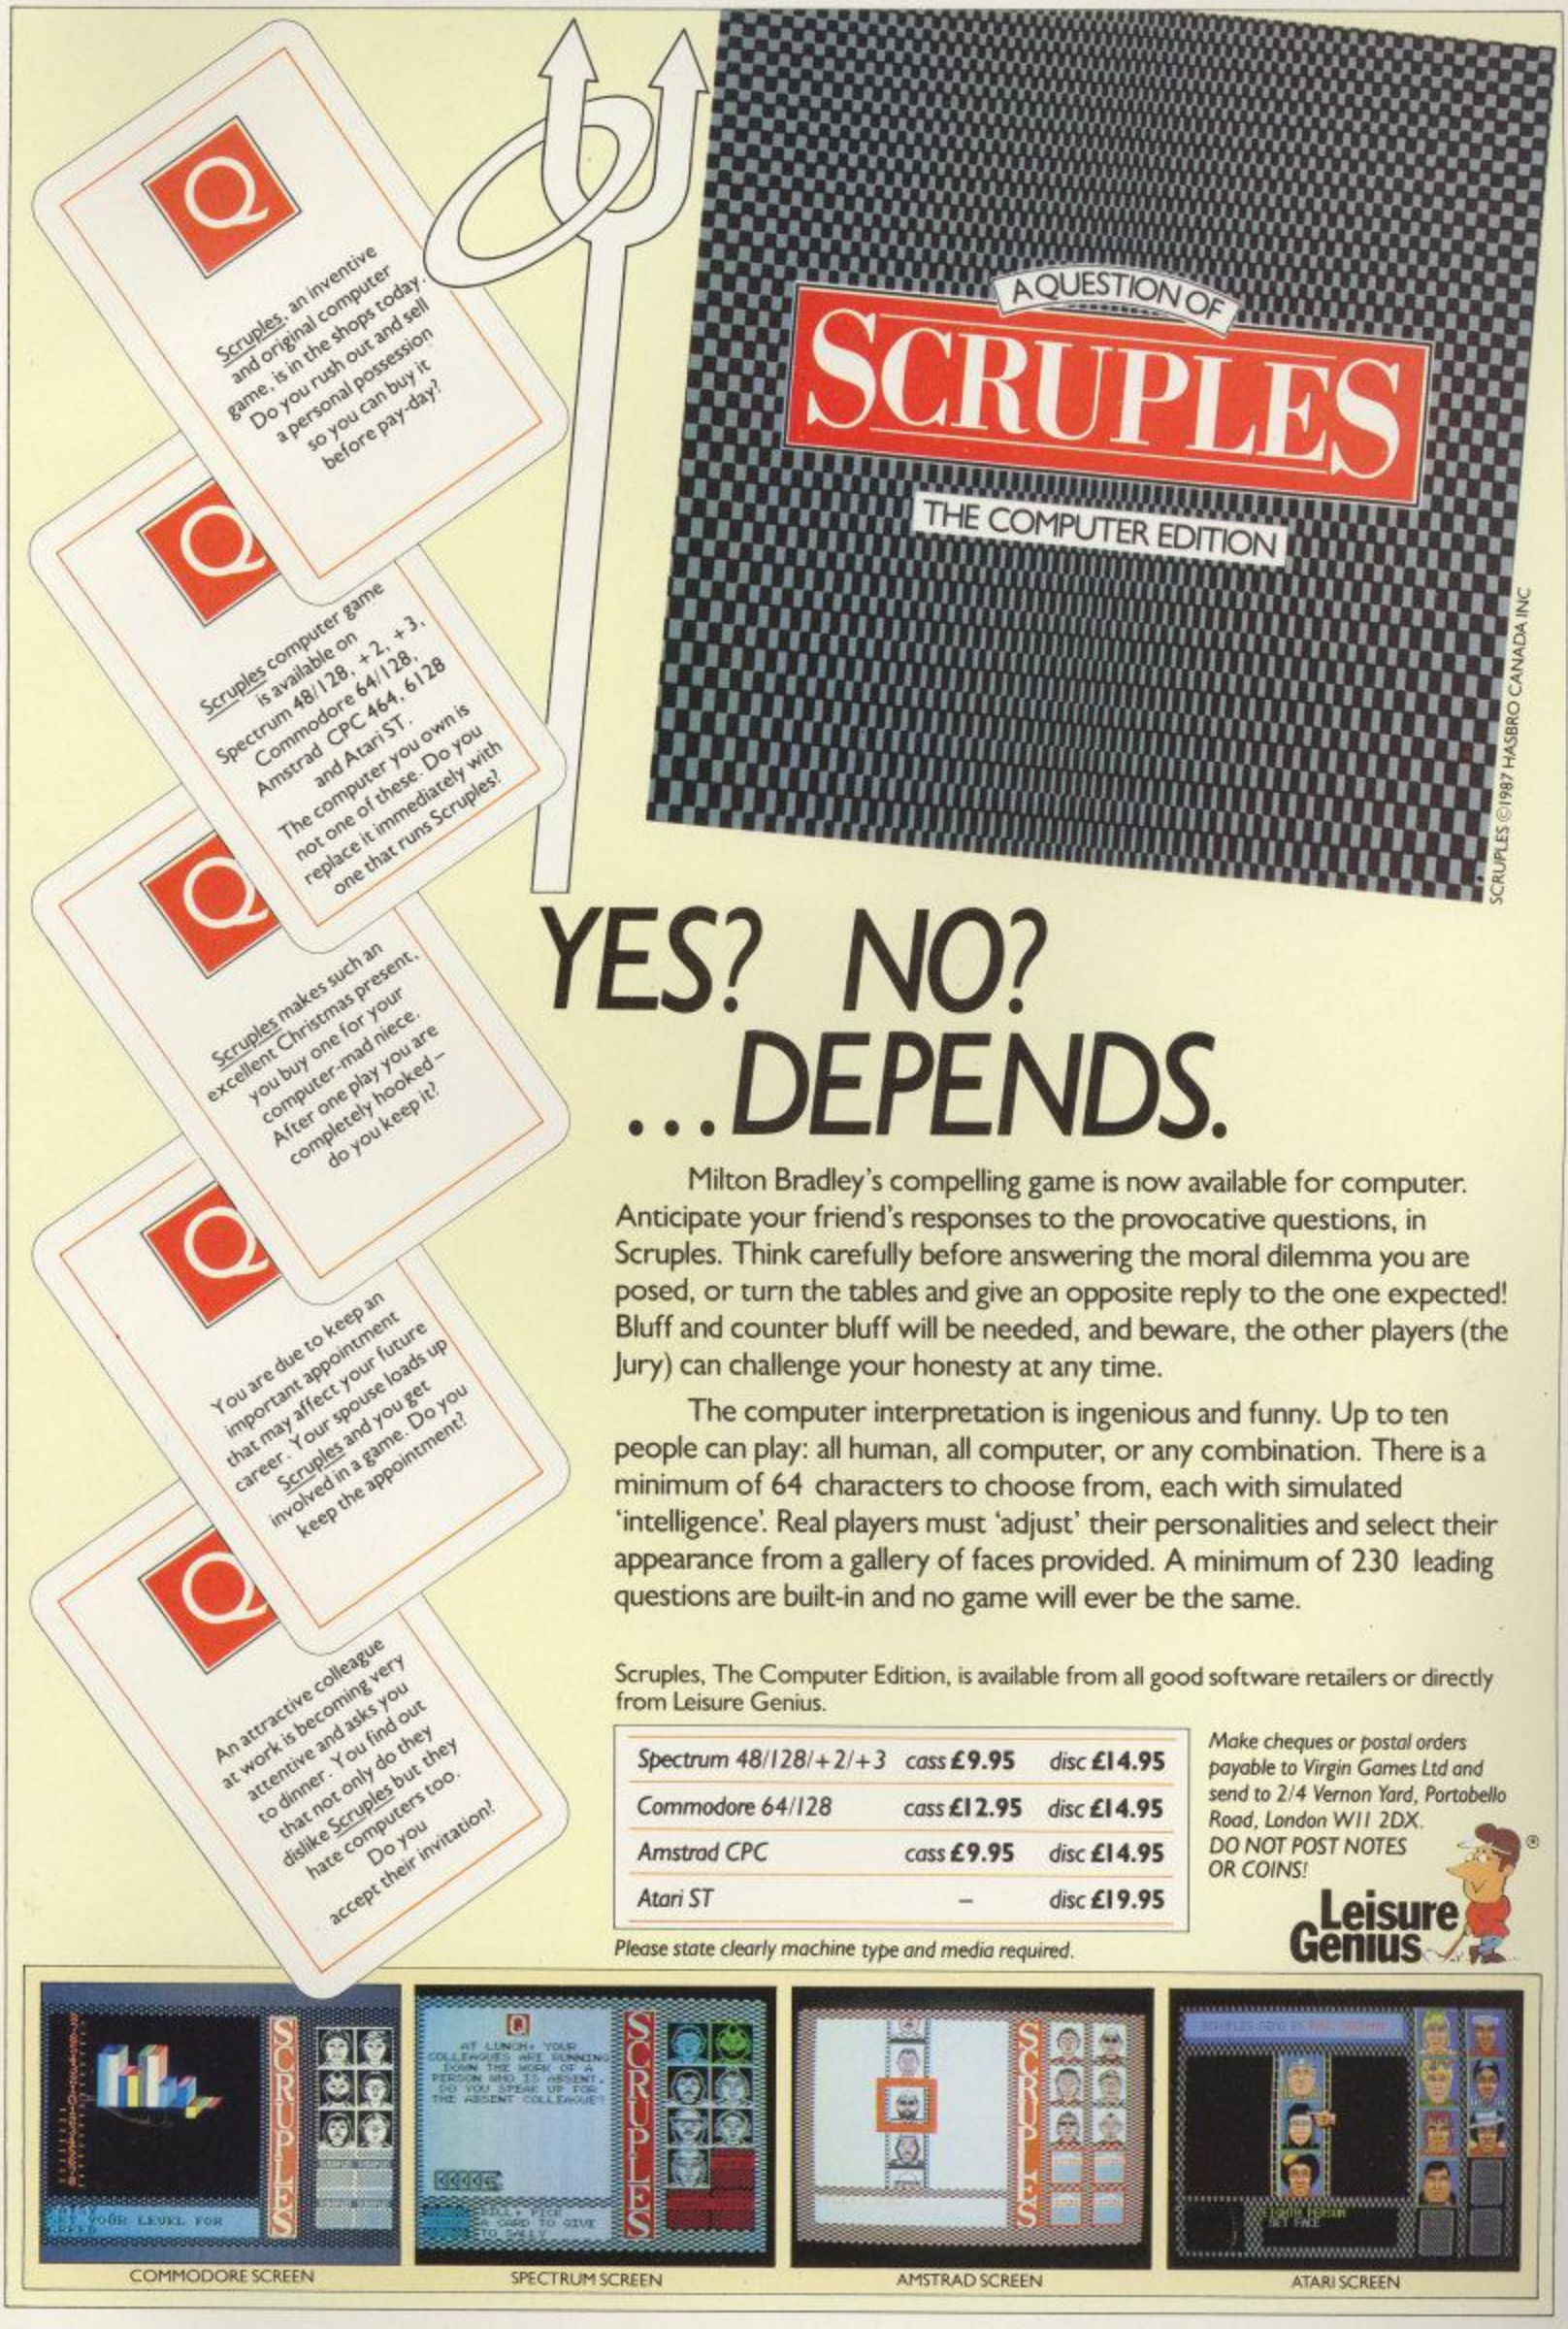

# Puzzle Corner

After a series of adventures, you have made your way to the evil wizard's treasure room. All that remains is to make off with the loot!

The treasure is on an island in the centre of an acid filled pool. The distance between you and the island is twelve feet. All you can find to help you are two planks but unfortunately, they are both only ten feet long.

Can you still get the treasure and if so, how? Diagrams should be sent to: Your Commodore, Puzzle Corner, 1 Golden Square, London W1R 3AB.

# YES? NO? ...DEPENDS.

Milton Bradley's compelling game is now available for computer. Anticipate your friend's responses to the provocative questions, in Scruples. Think carefully before answering the moral dilemma you are posed, or turn the tables and give an opposite reply to the one expected! Bluff and counter bluff will be needed, and beware, the other players (the Jury) can challenge your honesty at any time.

The computer interpretation is ingenious and funny. Up to ten people can play: all human, all computer, or any combination. There is a minimum of 64 characters to choose from, each with simulated 'intelligence'. Real players must 'adjust' their personalities and select their appearance from a gallery of faces provided. A minimum of 230 leading questions are built-in and no game will ever be the same.

Scruples, The Computer Edition, is available from all good software retailers or directly from Leisure Genius.

ATARI SCREEN

# It plays like a dream... but seems like a NIGHTMARE!

**TRAPPED** – *in a 1970's arcade machine! Every escape route is blocked by a wall of brightly coloured bricks. Powerfully addictive, with 200k of digitized sound,* **IMPACT** *has 80 built in screens plus 48 that you can design yourself – as hard, as simple, as much fun as you like. Hidden on each screen are special tokens – catch them if you can. Use them to buy one of nine powerful weapons, or keep them until the end of the screen to score a bonus.*

*Available now, price £14.95 for Amiga (512k min.) and Atari ST (requires 512k, mouse and colour monitor or TV).*
*Now released for CBM64, Spectrum and BBC (specifications vary).*
*Audiogenic Software ltd., Winchester House, Canning Road, Wealdstone, Harrow, Middlesex HA3 7SJ.*
